

# **THIAGARAJAR COLLEGE OF ENGINEERING**

(A Govt. Aided Autonomous Institution Affiliated to Anna University)

**MADURAI – 625 015**

## **CURRICULUM AND SYLLABI**

**for**

**B.E. DEGREE PROGRAMME**

**IN**

**ELECTRONICS AND COMMUNICATION ENGINEERING**

**FOR THE STUDENTS ADMITTED FROM THE ACADEMIC YEAR 2026-2027 ONWARDS**

## **Vision and Mission of the Department**

### **Vision:**

To empower the Electronics and Communication Engineering students with technological excellence, professional commitment and social responsibility.

### **Mission:**

- ME1. Attaining academic excellence in Electronics and Communication Engineering through dedication to duty, innovation in learning and research, state of the art laboratories and industry driven skill development.
- ME2. Establishing suitable environment for the students to develop professionalism and face life challenges with ethical integrity.
- ME3. Nurturing the students to understand the societal needs and equip them with technical expertise to provide appropriate solutions.
- ME4. Providing breeding ground to obtain entrepreneurial skills and leadership qualities for self and social growth.

### **Program Educational Objectives (PEOs):**

- PEO1. Graduates will be capable of developing specification and design procedures, prototyping and test methodologies for modern electronics and communication systems and gadgets that perform analog and digital processing functions.
- PEO2. Graduates will be able to work and adapt to changes in allied areas of Electronics and Communication Engineering through personal success and life long learning.
- PEO3. Graduates will be able to identify technological requirements for the society and provide cost effective solutions.
  - These objectives will be evidenced by professional visibility (publications, presentations, inventions, patents and awards), entrepreneurial activities, international activities (participation in international conferences, collaborative research and employment abroad)

**Program Outcomes:**

Engineering Graduates will be able to:

**PO1: Engineering Knowledge:** Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.

**PO2: Problem Analysis:** Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)

**PO3: Design/Development of Solutions:** Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)

**PO4: Conduct Investigations of Complex Problems:** Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).

**PO5: Engineering Tool Usage:** Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)

**PO6: The Engineer and The World:** Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).

**PO7: Ethics:** Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)

**PO8: Individual and Collaborative Team work:** Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

**PO9: Communication:** Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences

**PO10: Project Management and Finance:** Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

**PO11: Life-Long Learning:** Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

**Program Specific Outcomes:**

Engineering Graduates will be able to

PSO1. Design circuits and systems for complex engineering problems in Electronics and Communication and allied areas.

PSO2. Apply research methodologies to provide solutions for contemporary problems in the areas including RF, Signal Processing, Image Processing, VLSI, Optical Communication, Networks and Embedded Systems for given specifications.

PSO3. Actively contribute as a member or leader in diverse teams, and communicate effectively on complex engineering activities and involve in life-long learning, by applying reasoning and ethical principles.

### 1. Preamble

Applied calculus addresses the fundamental concepts of single and multivariable calculus with emphasis on engineering applications and problem solving. Focuses on modeling and analysis of engineering systems through derivatives and integrals. Develops analytical skills to analyze and solve real-world systems using derivatives and multiple integrals.

### 2. Prerequisite

- Nil

### 3. Course Outcome

After the successful completion of the course, students will be able to:

| CO  | Course Outcomes                                                                                                                                  | TPS Level | Performance Indicator | CO Weightage | SDG addressed | SDG Level |
|-----|--------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------|--------------|---------------|-----------|
| CO1 | Use functions, limits, continuity, and derivatives to solve mathematical and technical problems.                                                 | TPS3      | 1.1.1                 | 18%          | SDG4          | 2         |
| CO2 | Apply derivatives to determine extrema and characterize behavior of single variable functions.                                                   | TPS3      | 1.1.1                 | 18%          | SDG4          | 2         |
| CO3 | Compute partial derivatives to determine extrema of multivariable functions.                                                                     | TPS3      | 1.1.1                 | 18%          | SDG4          | 2         |
| CO4 | Apply techniques of double integrals to compute areas and volumes of bounded regions.                                                            | TPS3      | 1.1.1                 | 16%          | SDG4          | 2         |
| CO5 | Apply double integrals to determine physical quantities such as density, mass, moments, center of mass, and moments of inertia and Surface Area. | TPS3      | 1.1.1                 | 12%          | SDG4          | 2         |
| CO6 | Compute volumes using triple integrals in Cartesian, Cylindrical, and Spherical coordinates.                                                     | TPS3      | 1.1.1                 | 18%          | SDG4          | 2         |

#### 4.Assessment Pattern

Activities are given for self-study using mathematical software. They can be tested through open ended assignments.

#### 5.Syllabus

**Foundations of Differential Calculus:** New functions from old functions - Limit of a function and Continuity of a function - Limits at infinity - Derivative as a function.

**Activities:** Visualization of the functions, model and solve scientific and engineering phenomena using concept of function, limits, continuity, intermediate value theorem and derivatives. Solving Competitive Examination problems with emphasis to GATE

**Applications of Differential Calculus:** Maxima and Minima of functions of single variable - The Mean value theorem - Effect of derivatives on the shape of the graph of a function.

**Activities:** Model and solve scientific, engineering phenomena using concept of Maxima and Minima of a function, Rolle's Theorem and mean value theorem and derivatives. Solve Competitive Examination problems with emphasis to GATE

**Partial Derivatives and its Applications:** Partial derivatives - Chain rule - Maxima and minima of functions of two variables - Method of Lagrange's Multipliers for function with single constraint.

**Activities:** Model and solve scientific, engineering phenomena using concept Partial derivatives, Chain rule, Maxima and minima of functions of two variables, Method of Lagrange's Multipliers. Solve Competitive Examination problems with emphasis to GATE.

**Double Integrals and its Applications:** Iterated integrals and Fubini's theorem - Double integrals over general regions - Changing the order of integration - Properties of double integrals - Double integrals in polar coordinates – Applications of double integrals (Density, Mass, Moments & Moments of Inertia problems only) - Surface area.

**Activities:** Using the concept of Double integrals, model and solve scientific, engineering phenomena. Solve Competitive Examination problems with emphasis to GATE

**Triple Integrals and its Applications:** Triple integrals over rectangular boxes - Triple integrals over general regions - Triple integrals in cylindrical coordinates - Triple integrals in spherical coordinates.

**Activities:** Model and solve scientific, engineering phenomena using concept of Triple integrals in Cartesian, cylindrical and spherical coordinates. Solve Competitive Examination problems with emphasis to GATE.

## 6. Learning Resources

### 6.1 Text Book

- 1) James Stewart, Daniel Clegg and Saleem Watson, "Calculus Early Transcendentals", 9<sup>th</sup> edition, Cengage Learning, New Delhi, 2019.  
Foundations of Differential Calculus: [1.3, 2.2, 2.5, 2.6, 2.8]  
Applications of Differential Calculus: [4.1, 4.2, 4.3]  
Partial Derivatives and its Applications: [14.3, 14.5, 14.7, 14.8]  
Double Integrals and its Applications: [15.1, 15.2, 15.3, 15.4, 15.5]  
Triple Integrals and its Applications: [15.6, 15.7, 15.8]

### 1. Preamble

Physics provides a strong foundation in classical and modern physics, including mechanics, wave phenomena, electrodynamics, electronic materials, and quantum theory, relevant to engineering applications. This course connects fundamental principles with modern technologies such as solar cells, electric vehicles, MRI scanners, scanning tunneling microscopes, and emerging quantum technologies.

### 2. Prerequisite

Physics and Mathematics at Higher Secondary Level (Class XII)

### 3. Course Outcomes

After the successful completion of the course, students will be able to:

| No. | Course Outcome                                                                                                                                                                                                      | TPS Level | Performance Indicator | CO Weightage | SDG addressed | SDG Level |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------|--------------|---------------|-----------|
| CO1 | Apply the principles of mechanics of solids, including the work-energy theorem, central forces, conservation of angular momentum, and coordinate transformations, to solve problems on satellite maneuvers.         | TPS3      | 1.2.1                 | 15           | SDG 9         | 1         |
| CO2 | Apply the equations of oscillatory and wave motion to solve problems on damped and forced oscillations, Q factor, impedance matching, phase and group velocity, and dispersive wave phenomena.                      | TPS3      | 1.2.1                 | 15           | SDG 11        | 1         |
| CO3 | Apply Maxwell's equations and Poynting's theorem to solve problems on electromagnetic wave propagation, polarization, and energy-momentum transport in vacuum and conducting media.                                 | TPS3      | 1.2.1                 | 18           | SDG 3         | 1         |
| CO4 | Apply band theory, carrier transport equations, and Fermi level concepts to compute carrier concentration and solve problems related to the operation of solar cells, batteries, supercapacitors, and EV materials. | TPS3      | 1.2.1                 | 18           | SDG 7         | 2         |
| CO5 | Apply the Schrodinger wave equation and quantum mechanical principles to solve                                                                                                                                      | TPS3      | 1.2.1                 | 17           | SDG 4         | 0         |

|     |                                                                                                                                                                                                                           |      |       |    |       |   |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|----|-------|---|
|     | problems on a particle in a 1D box, a quantum harmonic oscillator, and tunneling as realized in the scanning tunneling microscope.                                                                                        |      |       |    |       |   |
| CO6 | Apply the principles of superposition, entanglement, and quantum logic gates to solve problems, illustrating the fundamental operational differences between classical and quantum computing using qubit representations. | TPS3 | 1.4.1 | 17 | SDG 9 | 1 |

#### 4. Assessment Pattern

| CO           | CAT1       | Assignment 1 | CAT2       | Assignment 2 | Terminal Exam |
|--------------|------------|--------------|------------|--------------|---------------|
|              | % of Marks | % of Marks   | % of Marks | % of Marks   | % of Marks    |
| CO1          | 35         | 35           | —          | —            | 15            |
| CO2          | 35         | 35           | —          | —            | 15            |
| CO3          | 30         | 30           | —          | —            | 18            |
| CO4          | —          | —            | 35         | 35           | 18            |
| CO5          | —          | —            | 35         | 35           | 17            |
| CO6          | —          | —            | 30         | 30           | 17            |
| <b>Total</b> | <b>100</b> | <b>100</b>   | <b>100</b> | <b>100</b>   | <b>100</b>    |

Note: CO-wise assessment must align with CO weightage.

#### 5. Syllabus

##### Module 1: Mechanics of Solids (6 hrs)

Scalars and Vectors Under Rotation Transformation – Work-Energy Theorem – Central Forces – Energy in Conservative and Non-Conservative Forces – Conservation of Angular Momentum – Coordinate Systems: Cartesian, Polar, Cylindrical – Satellite Maneuvers.

##### Module 2: Oscillations and Waves (6 hrs)

Oscillatory Motion – Damped Oscillations – Forced Oscillations (Qualitative only): Differential Equation and its Solution – Q Factor – Impedance Matching – Group Velocity and Phase Velocity – Non-Dispersive Transverse and Longitudinal Waves in a String – Dispersive Waves – Seismic Waves – Water Waves and Tsunamis.

##### Module 3: Electrodynamics (6 hrs)

Maxwell's Equations of Electromagnetism – Equation of Continuity – Poynting's Theorem – Electromagnetic Waves – Polarization – EM Waves in Vacuum and Conductors – Energy and Momentum in EM Waves – Application: CT/MRI Scan.

##### Module 4: Physics of Electronic Materials (6 hrs)

Band Theory of Solids – Kronig-Penney Model (Qualitative only) – Bloch's Theorem – Intrinsic and Extrinsic Semiconductors – Carrier Concentration and Fermi Level – Electron and Hole Transport – Solar Cells – Charge Storage in Batteries and Supercapacitors – Materials for Electric Vehicles (EV) – 2D Materials, Flexible Electronic Materials, and Quantum Materials.

**pModule 5: Quantum Mechanics (6 hrs)**

Wave Nature of Particles – Wave Function – Expectation Values – Schrodinger Wave Equations – Uncertainty Principle – Particle in a 1D Box – Quantum Harmonic Oscillator – Quantum Tunnelling (Qualitative only) – Scanning Tunneling Microscope.

**Module 6: Quantum Computing (6 hrs)**

Quantum Computing – Classical and Quantum Computing: Key Differences – Bloch Sphere Representation of Qubits – Types of Qubits – Superposition – Quantum Entanglement – Quantum Logic Gates.

**Preamble**

This course introduces basic electrical circuit concepts, including voltage, current, power, and Kirchhoff's laws. It covers DC and AC circuit analysis using network theorems and phasor techniques, along with time-domain analysis of first-order RL and RC circuits. The course also includes resonance and an introduction to magnetically coupled circuits and transformers.

**Prerequisite**

NIL

**Course Outcomes**

After the successful completion of the course, students will be able to:

| No. | Course Outcome                                                                                                | TPS Level | Performance Indicator | CO Weightage | SDG addressed | SDG Level |
|-----|---------------------------------------------------------------------------------------------------------------|-----------|-----------------------|--------------|---------------|-----------|
| CO1 | Apply fundamental electrical quantities and circuit laws (KCL, KVL) to DC circuits.                           | TPS3      | 1.2.1                 | 10           | SDG 9         | 2         |
| CO2 | Solve DC circuits using Node and Mesh analysis                                                                | TPS3      | 1.3.1                 | 10           | SDG 9         | 2         |
| CO3 | Apply network theorems to simplify electrical circuits.                                                       | TPS3      | 1.3.2                 | 20           | SDG 9         | 2         |

## Syllabus

**Basic electrical quantities:** Charge – current – voltage – power - Independent and dependent sources - Ohm's law - Kirchhoff's Current Law (KCL) and Kirchhoff's Voltage Law (KVL) - Series and parallel circuits; Voltage and current divider rules.

**Solution Methods:**

Node voltage method - Mesh current method - Supernode and supermesh analysis - Systematic formulation and solution of circuit equations for DC networks.

**Network Theorems:**

Source transformation - Superposition theorem - Thévenin's and Norton's equivalent circuits - Maximum power transfer theorem -  $\Delta$ -Y and Y- $\Delta$  transformations - Simplification of complex networks using theorems.

**AC Analysis:**

Sinusoidal signals and phasor representation - Complex impedance of R, L and C elements - Analysis of RL, RC and RLC series and parallel circuits - Active, reactive and apparent power - Power factor - Basic introduction to three-phase systems.

**Transient Analysis:**

Analysis of first-order RL and RC circuits using differential equation approach - Determination of initial and steady-state conditions - Natural and forced responses - Time constant and transient behavior under DC excitation - Evaluation of current and voltage responses

**Resonance:**

Series and parallel resonance - Resonant frequency - Quality factor bandwidth and half-power frequencies

**Magnetic Circuits:**

Mutual inductance and coefficient of coupling - Dot convention - Energy considerations - Basic analysis of coupled circuits - Ideal transformer and impedance matching (introductory level).

### 1. Preamble

Technical English is a course that develops essential communication skills for academic and engineering professional contexts. The course integrates listening, speaking, reading, and writing through practical technical and workplace-based activities.

### 2. Prerequisite

Nil

### 3. Course Outcomes

After the successful completion of the course, students will be able to:

| No. | Course Outcome                                                                                                                                                | TPS Level | Performance Indicator | CO Weightage | SDG addressed | SDG Level |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------|--------------|---------------|-----------|
| CO1 | Interpret technical texts, engineering manuals, and academic articles, extracting key information and inferring meaning from the context.                     | TPS3      | 9.1.1                 | 20%          | 4             | 1         |
| CO2 | Use context-appropriate vocabulary and grammatical accuracy in technical writing including reports, Instructions, and graphical Interpretation.               | TPS3      | 9.1.2                 | 20%          | 4             | 1         |
| CO3 | Draft agendas, notices, and minutes of meetings in accordance with standard organizational formats and communication protocols.                               | TPS3      | 9.1.3                 | 20%          | 5             | 1         |
| CO4 | Design effective technical presentation slides using visual clarity, proper formatting, and appropriate data representation techniques.                       | TPS3      | 9.2.2                 | 20%          | 4             | 1         |
| CO5 | Apply professional and ethical communication practices in social media and workplace digital communication using proper netiquette and sentence construction. | TPS3      | 9.3.2                 | 20%          | 11            | 1         |

#### 5. Syllabus

##### Module1

##### Technical Reading and Vocabulary Development

Technical Reading Strategies – Skimming, Scanning, Intensive and Extensive Reading – Manuals - Academic Articles — Technical Word Families – Prefixes and Suffixes in Engineering Terminology – Collocations in Engineering Discourse – Inferring meaning from Context- Note-making, Summarising and Paraphrasing Technical Content.

**Lab Activity:** Listening files and Note-taking& Reading- based note making

##### Module 2

##### Editing, Analytical Reading and Ethical AI Communication Skills

Analytical Reading and Error Identification – Sentence clarity, cohesion and transition signals – Ethical use of AI in Writing and Communication – AI-assisted Editing and Summarising – Interpreting Charts, Graphs and Diagrams.

**Lab Activity:** Reading-based Editing Exercises – Picture/Chart Description Activity.

##### Module 3

##### Professional and Technical Workplace Communication

Formal Letters – Permission- Bona fide - Business Letters – Formats – Letters of Inquiry, Complaint, and Recommendation – Minutes of Meetings and Notices – Agenda preparation – Recording and Circulating Minutes – Action Items and Follow-up Communication.

**Lab Activity:** Listening to Audio files and Preparing Minutes

##### Module 4

##### Oral Communication and Interpersonal Skills

Question Forms and Question Tags- Spotting Errors- Types of Sentences- Oral Presentation Skills – Planning and Structuring a Technical Presentation – Designing effective Slides (visual clarity, data display) – Verbal and Non-verbal Communication – Handling Q&A Sessions.

**Lab Activity:** Digital Presentation, Spotting Errors

##### Module 5

##### Career Communication and Digital Professionalism

Social Media and Workplace Digital Communication – Professional Use of Platforms – etiquette – Data Privacy and Ethical Communication Practices – Environmental and SDG-aligned Communication- Jumbled Sentences.

**Lab Activity:** Presentation on SDG topics, Jumbled Sentences

## 6. Learning Resources

### 6.1 Text Book

1. **Sanjay Kumar and Pushplata**, "Communication Skills", 3<sup>rd</sup> Edition, Oxford University Press, 2021.
2. **M. Ashraf Rizvi**, "Effective Technical Communication", 2<sup>nd</sup> Edition, McGraw-Hill Education India, 2018.
3. **John M. Lannon and Laura J. Gurak**, "Technical Communication", 15th Edition, Pearson Education, 2020.

**Department of English**, Technical English Work Book, 1st Edition, New Century Book House (P) Ltd., Chennai.

**Preamble**

This course provides a practical knowledge on Python programming for solving real-world and engineering problems. Students will learn to develop programs using fundamental programming constructs such as data types, operators, conditional statements, and iterative loops. The course emphasizes modular programming through functions and scope management, along with the effective use of mutable data structures for technical applications. Learners will gain hands-on experience in file handling, exception handling, libraries and the development of robust applications.

**Prerequisite**

Nil

**Course Outcomes**

On the successful completion of the course, students will be able to

| <b>Total Internal Marks</b> |                                             | <b>100</b> |                                          |
| End Semester Examination    | CO-wise (Cognitive, Psychomotor, Affective) | 100        | Rubrics covering all Domains of learning |

**Syllabus**

**Basics:** Python interpreter, variables, expressions, operators, assignments, Strings, control flow - conditionals, loops, simple console input and output.

**Functions and Scoping:** Function definition, Keyword Arguments and default values, Variable arguments, Scoping, Iterators and generators.

**Structured Types and Mutability:** Tuples, Ranges and Iterables, Arrays-Lists, Set, Dictionary, Higher order functions, Recursion and Global variables.

**Files and Exceptions:** Modules, Pre-defined packages, File handling -I/O System, File I/O, Read and Write operations, Exceptions - Control flow mechanisms.

**Libraries:** Exploring Data with Numpy, Pandas, Matplotlib, Tensor Flow, Keras.

**Practical:**

1. Implement programs using simple statements and expressions (exchange the values of two variables, distance between two points).
2. Implement programs using Scientific problems using Conditionals and Iterative loops. (Number series, Number Patterns, pyramid pattern).
3. Implement programs using Strings. (reverse, palindrome, character count, replacing characters).
4. Implement programs using Functions. (Factorial, largest number in a list, area of shape).
5. Implement programs using Functions/Method which operates on Tuples/List.
6. Implement programs using Functions/Method which operates on Dictionary.
7. Implement programs real-time/technical applications using File handling. (copy from one file to another, word count, longest word).
8. Implement real-time/technical applications using Exception handling. (divide by zero error, voter's age validity, student mark range validation)
9. Implement programs using Python Standard Libraries (pandas, numpy and Matplotlib).

**Text Book**

- John V.Gutttag, "Introduction to Computation and Programming Using Python: With Application to Understanding Data", Prentice-Hall International publishers, Second Edition, 2017

**Reference Books & web resources**

- R.G.Dromey, "How to solve it by Computers", Pearson Education India, First Edition, 2008.

- MIT Open Courseware
- SWAYAM/NPTEL Course on Joy of Computing using Python by Prof. Sudarshan Iyengar IIT Ropar.

**SDG Alignment**

Activities aligned with SDGs addressed:

1. SDG 4 - Apply programming concepts to solve scientific and engineering problem.
2. SDG 9 - Apply programming techniques to address real-world and engineering challenges, contributing to technological advancement and digital infrastructure. Promote innovation through the development of scalable and maintainable applications using modern programming practices.

| Course Contents and Lecture Schedule |                                             |               |                 |

### 1. Preamble

This course introduces first-year engineering students to the engineering profession, fundamental measurement techniques, and the design of simple functional systems. Through hands-on activities such as product teardown, instrument-based measurements, 3D modelling using TinkerCAD, data analysis with Excel, and team-based projects, students develop essential technical and professional skills. The course follows the CDIO (Conceive–Design–Implement–Operate) framework, fostering engineering thinking from the first semester. It also promotes awareness of engineering ethics, safety, sustainability, and the role of engineering in addressing societal challenges and the UN Sustainable Development Goals.

### 2. Prerequisite

Nil

### 3. Course Outcomes

On the successful completion of the course, students will be able to:

| No. | Course Outcome                                                                                                                                                | TCE Proficiency Scale | Performance Indicator | CO Weightage | SDG Addressed | SDG Level |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-----------------------|--------------|---------------|-----------|
| CO1 | Describe the engineering profession, major engineering disciplines, and the CDIO framework for product and system lifecycle.                                  | TPS 2                 | 1.1.1                 | 15%          | SDG 4         | 1         |
| CO2 | Decompose a product or engineering system into its functional components, sub-systems, and operational constraints using structured analysis.                 | TPS 3                 | 1.2.1                 | 20%          | SDG 9         | 2         |
| CO3 | Apply data acquisition systems and computational tools (Excel / Python) to acquire, process, and interpret sensor data with appropriate uncertainty analysis. | TPS 3                 | 5.2.1                 | 20%          | SDG 9         | 2         |
| CO4 | Implement and validate a simple engineering artefact/system by applying basic                                                                                 | TPS 3                 | 4.4.1                 | 20%          | SDG 9         | 2         |

|            | engineering principles, tools, and teamwork.                                                                                                               |       |       |     |                |   |
| <b>CO5</b> | Demonstrate professional teamwork and technical communication competencies through a structured engineering report and oral presentation.                  | TPS 3 | 8.2.1 | 15% | SDG 4          | 2 |
| <b>CO6</b> | Evaluate engineering solutions against criteria of professional ethics, occupational safety, and sustainable development, with reference to relevant SDGs. | TPS 4 | 7.2.1 | 10% | SDG 12, SDG 13 | 3 |

#### 4. Assessment Pattern

| CO    | Theory     |            | Practical                 |                    | Terminal Exam (Practical) |
|-------|------------|------------|---------------------------|--------------------|---------------------------|
|       | CAT1       | CAT2       | OCR/Continuous Assessment | Model Test CO-wise |                           |
|       | % of Marks | % of Marks | % of Marks                | % of Marks         | % of Marks                |
| CO1   |            | 25         | 100                       | 100                | 100                       |
| CO2   |            | 35         |                           |                    |                           |
| CO3   |            | 30         |                           |                    |                           |
| CO4   |            | 10         |                           |                    |                           |
| CO5   |            |            |                           |                    |                           |
| CO6   |            |            |                           |                    |                           |
| Total | -          | 100        | 100                       | 100                | 100                       |

#### 5. Assessment Pattern: Practical Component

| Type of Assessment          | Component                                   | Marks      | Remarks                                  |
|-----------------------------|---------------------------------------------|------------|------------------------------------------|
| Continuous Assessment       | Pre-lab, In-lab, Post-lab                   | 75         | Conducted throughout the semester        |
| Model Test                  | CO-wise (Cognitive, Psychomotor, Affective) | 25         | Rubrics covering all Domains of learning |
| <b>Total Internal Marks</b> |                                             | <b>100</b> |                                          |
| End Semester Examination    | CO-wise (Cognitive, Psychomotor, Affective) | 100        | Rubrics covering all Domains of learning |

## 6. Syllabus

### Module 1: Engineering Around Us

What is engineering? – Major engineering disciplines – Engineering in everyday life – Engineering and society – Creativity and innovation – Engineering products and systems – Product observation and teardown activity.

### Module 2: Engineering Measurements and Tools

SI units and engineering measurements – Measurement of dimensions and physical quantities using basic measuring instruments – Data recording – Accuracy, precision, and errors – Engineering estimation and reasoning – Safe use of engineering tools and instruments.

### Module 3: Engineering Visualization and Simulation

Introduction to engineering drawings and visualization – Basic 2D and 3D concepts – Excel for tables and graph plotting – Introduction to ThinkerCAD – Simple 3D object creation – Basic circuit simulation.

### Module 4: Engineering Making

Introduction to engineering materials – Basic fabrication techniques: cutting, joining, and assembling – Workshop safety practices – Introduction to sensors and automation concepts – Team-based engineering activity – Building a simple functional model.

### Module 5: Teamwork, Ethics and Sustainability

Teamwork and collaboration – Basics of technical presentations – Engineering ethics and responsibilities – Engineering safety – Sustainability and SDGs in engineering – Engineering solutions for society.

## 7. Learning Resources

### 7.1 Text Books

1. Crawley, E., Malmqvist, J., Ostlund, S., Brodeur, D., "Rethinking Engineering Education: The CDIO Approach", Springer, 2014.
2. Eide, A., Jenison, R., Mashaw, L., Northup, L., "Introduction to Engineering Design and Problem Solving", McGraw-Hill, 3rd Edition.

### 7.2 Reference Books & Web Resources

1. CDIO Syllabus v3.0, Worldwide CDIO Initiative -- [www.cdio.org](http://www.cdio.org) (free download).
2. MIT Open Course Ware 2.00A: Introduction to Design -- [ocw.mit.edu](http://ocw.mit.edu).
3. Python for Engineers: Google Colab notebooks (free, requires internet).
4. IEEE Engineering Ethics Resources -- [www.ieee.org/ethics](http://www.ieee.org/ethics).

### Preamble

Physics Laboratory enables first-year engineering students to experimentally explore the concepts taught in the co-requisite theory course (26PHSA0) through carefully designed experiments in core areas of physics. The course develops practical skills in instrumentation, data analysis, model validation, teamwork, safety, and ethical scientific reporting. It also supports Sustainable Development Goals related to quality education, clean energy, innovation, and sustainable development.

### Prerequisite

- Engineering Physics (26PHSA0) co-requisite
- Physics at the Higher Secondary (Class XII) level

### Course Outcomes

On the successful completion of the course, students will be able to

| COs | Course Outcome Statement                                                                                                                                              | TCE Proficiency Scale | Performance Indicators | Objective | SDG Addressed | SDG Level |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|------------------------|-----------|---------------|-----------|
| CO1 | Operate laboratory instruments, including photo detectors, solar cell setups, and logic trainers, to measure physical quantities related to core physics experiments. | TPS 3                 | 5.2.1                  | 1         | NC            | -         |
| CO2 | Analyse deviations between theoretical predictions and experimental results in mechanics, electrodynamics, and quantum physics experiments.                           | TPS 4                 | 2.3.1                  | 2         | NC            | -         |
| CO3 | Evaluate experimental procedures for adequacy of controls, documentation standards, and reproducibility.                                                              | TPS 5                 | 4.2.1                  | 3         | NC            | -         |
| CO4 | Examine experimental data using statistical methods to quantify uncertainty and draw valid conclusions.                                                               | TPS 3                 | 4.3.1                  | 4         | NC            | -         |
| CO5 | Demonstrate practical skills in setting up and handling optical, mechanical, and electronic experimental systems.                                                     | TPS 3                 | 5.2.1                  | 6         | NC            | -         |
| CO6 | Prepare structured laboratory reports that present experimental methods, results, and conclusions in a professional manner, with due regard for ethical standards.    | TPS 3                 | 9.1.2                  | 13        | NC            | -         |

**Assessment Pattern: Cognitive Domain**

| Type of Assessment          | Component                                   | Marks      | Remarks                                     |
|-----------------------------|---------------------------------------------|------------|---------------------------------------------|
| Continuous Assessment       | Pre-lab, In-lab, Post-lab                   | 75         | Conducted throughout the semester           |
| Model Test                  | CO-wise (Cognitive, Psychomotor, Affective) | 25         | Mid/End semester internal test              |
| <b>Total Internal Marks</b> |                                             | <b>100</b> |                                             |
| End Semester Examination    | CO-wise (Cognitive, Psychomotor, Affective) | 100        | As directed by COE or as per the curriculum |

**List of Experiments with CO Mapping**

| Sl. No. | Name of the Experiment                                                                                                                                               | Level of Experiment | Objective(s) | COs Addressed           |
|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|--------------|-------------------------|
| 1       | Determine the acceleration due to gravity (g) and the radius of gyration of a compound pendulum by studying its time period of oscillation.                          | 1                   | 1,2,3,4,13   | CO1, CO2, CO3, CO4, CO6 |
| 2       | Determine the resonant frequency, quality factor (Q), and bandwidth of an LCR series circuit by measuring the frequency response of current amplitude.               | 1                   | 1,2,3,4,13   | CO1, CO2, CO3, CO4, CO6 |
| 3       | Determine the energy band gap ( $E_g$ ) of a semiconductor material (Germanium or Silicon) by studying the variation of reverse saturation current with temperature. | 1                   | 1,2,3,4,13   | CO1, CO2, CO3, CO4, CO6 |
| 4       | Determine Planck's constant (h) using LEDs of different known wavelengths by measuring the threshold (knee) voltage for light emission.                              | 1                   | 1,2,3,4,6    | CO1, CO2, CO3, CO4, CO5 |
| 5       | Determine the frequency of AC supply using a sonometer and verify the laws of transverse vibrations of stretched strings.                                            | 1                   | 1,2,3,4,6    | CO1, CO2, CO3, CO4, CO5 |
| 6       | Realise the Toffoli gate (CCNOT) using standard NAND, AND, and XOR logic gates, and verify its                                                                       | 2                   | 1,3,13       | CO1, CO3, CO6           |

|   |                                                                                                                                                                                                                                         |   |            |                         |

**1. Preamble**

Tamil heritage represents a rich blend of culture, literature, art, science, ethics, and social values that have shaped Tamil civilization for centuries. It offers valuable insights into humanism, environmental harmony, indigenous knowledge systems, and inclusive social living. The timeless ideals reflected in Tamil literature and traditions help students develop cultural awareness, ethical responsibility, and global citizenship. This course enables learners to appreciate the contributions of the Tamils and understand the relevance of their heritage in the modern world

**2. Prerequisite**

NIL

**3. Course Outcome:**

On the successful completion of the course students will be able to

| No  | Course Outcome                                                                                                                                                     | TPS Level | PO Addressed                  | CO Weigh tage | SDG addres sed | SDG Level |

## 5. Syllabus

### Module 1:

Language Families in India – Dravidian Language – Tamil as a Classical Language – Classical Literature in Tamil – Secular Nature of Sangam Literature – Management Principles in Thirukkural – Tamil Epics and Impact of Buddhism & Jainism in Tamil Land – Bhakti Literature: Azhwars and Nayanmars – Forms of Minor Poetry – Development of Modern Literature in Tamil – Contribution of Bharathiyar and Bharathidasan.

### Module 2:

Hero Stone to Modern Sculpture – Bronze Icons – Tribes and their Handicrafts – Art of Temple Car Making – Massive Terracotta Sculptures – Village Deities – Thiruvalluvar Statue at Kanyakumari – Making of Musical Instruments: Mridangam, Parai, Veenai, Yazh and Nadaswaram – Role of Temples in Social and Economic Life of Tamils.

### Module 3:

Therukoothu, Karagattam, Villuppattu, Kaniyan Koothu, Oyilattam, Leather Puppetry, Silambattam, Valari, Tiger Dance – Sports and Games of Tamils.

### Module 4:

Flora and Fauna of Tamils – Akam and Puram Concept from Tolkappiam and Sangam Literature – Aram Concept of Tamils – Education and Literacy during Sangam Age – Ancient Cities and Ports of Sangam Age – Export and Import during Sangam Age – Overseas Conquest of Cholas.

### Module 5:

Contribution of Tamils to Indian Freedom Struggle – The Cultural Influence of Tamils over the Other Parts of India – Self-Respect Movement – Role of Siddha Medicine in Indigenous System of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.

## 6. Learning Resources

- தமிழக வரலாறு - மக்களும் பண்பாடும் (வெளியீடு: தமிழ்நாடு பாடநூல் மற்றும் கல்வியியல் பணிகள் கழகம்)
- கணித் தமிழ் - முனைவர் இல சுந்தரம் (விகடன் பிரசுரம்)
- கீழடி - வைகை நதிக்கரையில் சங்ககால நாகரீகம் (தொல்லியல் துறை வெளியீடு)
- பொருளை ஆற்றங்கரை நாகரீகம் (தொல்லியல் துறை வெளியீடு)
- Social Life of the Tamil – The Classical Period (Dr.K.K.Pillay) A joint publication of TNTB&ESC and RMRL – (inprint)
- Social Life of the Tamils- The Classical Period ( Dr.S.Singaravelu) Published by: International Institute of TamilStudies.
- Historial Heritage of the Tamils (Dr.S.V.Subatamanian, Dr.K.D.Thirunavukkarasu) ) Published by: International Institute of TamilStudies.
- The Contributions of the Tamils to Indian Culture (Dr.M.Valarmathi) Published by: International Institute of TamilStudies
- Keeladi – Sangam City Civilization on the banks of river Vaigai (Jointly Published Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation,Tamilnadu)
- Studies in the History of India with Special Reference to Tamil Nadu (Dr.K.K.Pillai, Publisher by The Author)

- Porunai Civilization (Jointly Published by : Department of Archaeology & Tamil Nadu Text Book and Education Service Corporation, TamilNadu)
- Journey of Civilization indus to Vaigai (R.Balakrishnan) Published by: RMRL – Reference Book

### 1. Preamble

This course inducts first-year students into the TCT Career Training (CT) framework. It combines a Vision induction — orientation, baseline online assessment, and group counseling — with WOWs, a structured Speed-Maths workshop that introduces mental-arithmetic methods. Together these elements build the motivation, baseline awareness, and computational fluency that support all subsequent CT courses.

### 2. Course Outcomes

*After the successful completion of the course, students will be able to:*

| No.        | Course Outcome                                                                                                | TPS Level | Performance Indicator | CO Weightage |
|------------|---------------------------------------------------------------------------------------------------------------|-----------|-----------------------|--------------|
| <b>CO1</b> | Articulate personal and academic goals aligned with the CT programme objectives.                              | TPS3      | 2.1.1                 | 20%          |
| <b>CO2</b> | Assess baseline aptitude through diagnostic tests and identify focus areas for improvement.                   | TPS3      | 2.1.2                 | 20%          |
| <b>CO3</b> | Apply foundational mental-arithmetic methods (SAW, Oz, Mirror, High 5) to solve numeric problems.             | TPS3      | 1.4.1                 | 20%          |
| <b>CO4</b> | Apply advanced WOWs methods (square/cube roots, Crisscross, Base multiplication) to multi-digit calculations. | TPS3      | 1.4.1                 | 20%          |
| <b>CO5</b> | Demonstrate computational speed and accuracy in time-bound aptitude challenges.                               | TPS4      | 2.4.1                 | 20%          |

### 3. Assessment Pattern

| CO           | CAT1 (% of Marks) | CAT2 (% of Marks) | Terminal Exam (% of Marks) |
|--------------|-------------------|-------------------|----------------------------|
| <b>CO1</b>   | 50                | —                 | 10                         |
| <b>CO2</b>   | 50                | —                 | 10                         |
| <b>CO3</b>   | —                 | 50                | 20                         |
| <b>CO4</b>   | —                 | 50                | 20                         |
| <b>CO5</b>   | —                 | —                 | 40                         |
| <b>Total</b> | <b>100</b>        | <b>100</b>        | <b>100</b>                 |

The assessment will be conducted by the Training Team, and the marks will be submitted by the respective faculty in charge.

## 4. Syllabus

### Module 1: Vision — Orientation & Programme Overview

Programme overview – CT framework – Expectations and outcomes – Code of conduct

### Module 2: Vision — Diagnostic Online Test

Baseline aptitude assessment – Section-wise diagnosis – Personal scorecard – Improvement plan

### Module 3: Vision — Group Counseling & Career Mapping

Career exploration – Goal setting – Strengths / interests mapping – Sector overview – Action planning

### Module 4: WOWs — Foundational Methods

SAW method – Oz method – Mirror method – High 5 method – Minion's method – King and Queen method – Square root and cube root – Butterfly method – Inception method

### Module 5: WOWs — Advanced Methods

Cube of a number – Goldeneye method – Base multiplication – Crisscross method – Super power method – Cast away method

## 5. Learning Resources

### 5.1 Text Book

M. Tyra — "Magical Book on Quicker Maths", BSC Publishing.

### 5.2 Reference Books & Web Resources

1. Bhanu Prakash — "Quicker Maths", S. Chand Publishing.
2. Arun Sharma — "How to Prepare for Quantitative Aptitude", McGraw Hill.
3. TCT CT Internal Workshop Manual — Speed Maths (WOWs).

### 1. Preamble

Linear Algebra and Numerical Techniques provide the essential mathematical tools needed in VLSI engineering. This course covers vector spaces, linear transformations, orthogonality, eigenvalue problems, and numerical methods for solving equations and performing computations. These topics directly support VLSI applications such as circuit analysis, signal processing, and device simulation.

### 2. Prerequisite

Nil

### 3. Course Outcomes

After the successful completion of the course, students will be able to:

| No. | Course Outcome                                                                                                      | TPS Level | Performance Indicator | CO Weightage | SDG addressed | SDG Level |
|-----|---------------------------------------------------------------------------------------------------------------------|-----------|-----------------------|--------------|---------------|-----------|
| CO1 | Apply the concepts of vector spaces to produce basis, dimension, row space, column space, null space.               | TPS3      | 1.1.1                 | 20%          | SDG4          | 2         |
| CO2 | Apply linear transformations and matrix representations to solve problems involving mappings between vector spaces. | TPS3      | 1.1.1                 | 10%          | SDG4          | 2         |
| CO3 | Use the Gram-Schmidt process to construct an orthonormal basis.                                                     | TPS3      | 1.1.1                 | 20%          | SDG4          | 2         |
| CO4 | Use eigenvalues and eigenvectors to perform Singular Value Decomposition.                                           | TPS3      | 1.1.1                 | 20%          | SDG4          | 2         |
| CO5 | Solve nonlinear equations and system of linear equations using numerical techniques.                                | TPS3      | 1.1.1                 | 20%          | SDG4          | 2         |
| CO6 | Compute numerical derivatives and definite integrals using numerical techniques.                                    | TPS3      | 1.1.1                 | 10%          | SDG4          | 2         |

#### 5. Syllabus

**Vector Spaces:** Vector space - Definition and Examples – Subspaces - Linear independence - Basis and Dimension - Row space and Column space - Rank and Nullity theorem.

**Linear Transformations:** Definitions and Examples - Matrix Representations of Linear Transformations.

**Orthogonality:** Orthogonal Subspaces - Inner Product spaces - Orthonormal sets - Orthogonal Matrices -Gram-Schmidt process - QR Factorization.

**Matrix Eigenvalue Problems:** Eigenvalues and Eigenvectors – Diagonalization - Quadratic forms - Singular Value Decomposition.

**Solution of Algebraic and Transcendental Equations:** Solving non-linear equation: Iteration method - Newton Raphson method - Solving system of linear equations: Gauss Elimination method - Gauss Jacobi and Gauss–Seidel iterative methods.

**Numerical Differentiation and Integration:** Derivatives (at end points) using Newton's forward and backward difference formula - Trapezoidal rule - Simpson's one-third rule – Simpson's three-eighth rules.

#### 6. Learning Resources

##### 6.1 Text Book

- Steven J. Leon, "Linear Algebra with Applications", Pearson, 10<sup>th</sup> edition, 2021.  
Vector Spaces: 3.1, 3.2, 3.3, 3.4, 3.6  
Linear Transformations: 4.1, 4.2  
Orthogonality: 5.2, 5.4, 5.5, 5.6  
Matrix Eigenvalue Problems: 6.5
- Erwin Kreszig, "Advanced Engineering Mathematics", John Wiley & Sons, Inc, 10<sup>th</sup> edition, 2011  
Matrix Eigenvalue Problems: 8.1, 8.4
- B. S. Grewal, "Numerical Methods in Engineering and Science: C, C++ and MATLAB", Mercury Learning and Information LLC, 1<sup>st</sup> edition, 2014.  
Solution of Algebraic and Transcendental Equations: 2.11, 2.12, 3.4, 3.5  
Numerical Differentiation and Integration: 8.1, 8.2, 8.4, 8.5

#### 5. Syllabus

**Water:** Water Quality parameters: Physical, Chemical, Biological- Alkalinity-Hardness of water: types-determination of hardness by EDTA method –Boiler trouble – Softening of water: Internal and External treatment methods – Ion-Exchange method, Desalination process: reverse- and forward osmosis, electrodialysis, solar and multistage flash distillation, Advanced oxidation process for Effluent Treatment. IOT-based sensor for water quality monitoring. [10 hours]

**Spectroscopic techniques and applications:** Principle, instrumentation, and applications: UV–Visiblespectroscopy-Fluorescence-Inductively Coupled Plasma-Optical Emission, Infra-red-Nuclear magnetic resonance, Magnetic resonance imaging - Spectroscopy in automobile, environmental, biomedical & space applications. [8 hours]

**Electrochemical technologies for energy storage and surface protection:** Basics of electrochemistry – Batteries: Parameters, Primary -and Secondary batteries (Lead-acid, Lithium-ion, Sodium, Air-batteries, Redox-flow battery, Numerical Problems) –Fuel cells - Photovoltaics and its types, Numerical Problems. Hydrogen generation and storage. Corrosion of electronic devices: causes, effects, Electrochemical methods of corrosion analysis. Control measures -Electroplating-Electroless plating. [11 hours]

**Chemistry of Engineering materials:** Bonding and the properties of materials -Ceramics and advanced ceramics: types, properties, applications – Nano-materials: Synthesis, structure, properties and applications. Carbon based materials – Graphene, Carbon fibers -. Molecular electronics - Conducting polymers and organic semiconductors, Organic light-emitting devices (OLEDs), Applications in wearable and flexible electronics. [7 hours]

### 1. Preamble

The objective of this course is to understand the fundamentals of electromagnetic fields and Maxwell's equations, analyze electromagnetic wave propagation, transmission lines, and waveguides, and apply electromagnetic principles to solve practical engineering and communication system problems.

### 2. Prerequisite

NIL

### 3. Course Outcomes

After the successful completion of the course, students will be able to:

| No. | Course Outcome                                                                                            | TPS Level | Performance Indicator | CO Weightage | SDG addressed | SDG Level |
|-----|-----------------------------------------------------------------------------------------------------------|-----------|-----------------------|--------------|---------------|-----------|
| CO1 | Apply and solve electrostatic field problems using fundamental electromagnetic laws and principles.       | TPS3      | 2.4.1                 | 70           | SDG 4         | 1         |
| CO2 | Apply magnetostatic laws to calculate magnetic field intensity and flux density in various                | TPS3      | 2.4.1                 | 70           | SDG 9         | 2         |
| CO3 | Understand Electromagnetic field concepts in practical engineering applications and Communication system. | TPS2      | 2.1.1                 | 70           | SDG 9         | 2         |
| CO4 | Apply Maxwell's equations to determine the behavior of time-varying electromagnetic fields.               | TPS3      | 2.4.1                 | 70           | SDG 9         | 2         |
| CO5 | Apply wave propagation principles to determine electromagnetic wave characteristics in different media.   | TPS3      | 2.4.1                 | 70           | SDG 9         | 2         |
| CO6 | Apply transmission line and waveguide theories to determine propagation and performance parameters.       | TPS3      | 2.4.1                 | 70           | SDG 3         | 2         |

**4. Assessment Pattern**

| CO           | CAT1       | Assignment 1 | CAT2       | Assignment 2 | Terminal Exam |

| CO6          |            |              | 30         |              | 15            |
| <b>Total</b> | <b>100</b> | <b>100</b>   | <b>100</b> | <b>100</b>   | <b>100</b>    |

**5. Syllabus**

**Electrostatics:** Coulomb's law and Gauss's law; Scalar Potential; Electrostatic Field of Charge Distributions; Permittivity; Boundary Conditions; Concept of Capacitance; Electric Current; Equation of Continuity; Electrical Conductivity and Resistance, Applications.

**Magnetostatics:** Biot-Savart's and Ampere's laws; Vector Potential; Magnetostatic Field of Current Distributions; Permeability; Boundary Conditions; Concept of Inductance, Applications – CRT – magnetic deflection, Magnetic brake, Linear motor.

**Electrodynamics:** Induction, Faraday's law, Lenz's law, Curl, Displacement current, Maxwell's equations, Electromagnetic Boundary conditions, Poynting theorem, Applications – Generator, Rotary motor.

**Uniform Plane Waves:** Wave Equation, Wave Polarization, Lossy Media, Skin Depth, Applications – Retinal optic fibers, Electromagnetic hazards and the environment.

**Transmission Lines and Waveguides:** Transmission Line Equations, Types, Parameters, Classification of guided wave solutions-TE, TM and TEM waves; Rectangular and circular waveguides.

**1. Preamble**

Digital systems form the foundation of modern electronic devices by processing information in binary form. This course provides students with hands-on training in the design and analysis of combinational and sequential logic circuits. It emphasizes the use of Hardware Description Language (HDL) for modelling, simulating, and implementing digital logic designs on standard integrated circuits, preparing students for real-world digital system applications.

**2. Prerequisite**

Nil

**3. Course Outcomes**

After the successful completion of the course, students will be able to:

| No. | Course Outcome                                                                                                                                                              | TPS Level | Performance Indicator   | CO Weightage | SDG addressed  | SDG Level |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-------------------------|--------------|----------------|-----------|
| CO1 | Explain the fundamentals of digital information systems and apply number system concepts in digital design                                                                  | TPS2      | 1.3.1<br>1.6.1<br>1.7.1 | 10%          | SDG 4          | 1         |
| CO2 | Apply Boolean algebra and graphical minimization techniques (K-Map, Quine-McCluskey) to simplify and optimize logic functions for efficient digital circuit implementation. | TPS3      | 1.7.1<br>2.8.1          | 10%          | SDG 4          | 1         |
| CO3 | Design and implement combinational logic circuits using standard gate networks to meet given functional specifications                                                      | TPS3      | 3.5.1<br>3.6.1<br>3.6.1 | 24%          | SDG 4<br>SDG 9 | 2         |
| CO4 | Design synchronous sequential circuits using state machine models (flip-flops, counters, registers) for a given specification,                                              | TPS3      | 3.8.1<br>3.8.3          | 24%          | SDG 4<br>SDG 9 | 2         |
| CO5 | Design asynchronous sequential circuits for a given specification using fundamental-mode analysis, primitive flow tables, merger diagrams, and race-free state assignment   | TPS3      | 2.6.1<br>2.6.3          | 12%          | SDG 4<br>SDG 9 | 2         |
| CO6 | Analyse sequential circuits using Moore and Mealy Finite State Machine (FSM) models to construct state diagrams, state tables, and output logic.                            | TPS4      | 2.7.1<br>2.7.2<br>3.7.1 | 20%          | SDG 4<br>SDG 9 | 2         |

**4. Assessment Pattern**

| <b>Total</b> | <b>100</b> | <b>100</b>   | <b>100</b> | <b>100</b>   | <b>100</b>    |

**5. Syllabus****Module 1**

Digital Information Processing: Basis of Digital System, Number systems and Codes, Methods of base conversions, Code Converters and their Applications.

**Module 2**

Boolean Algebra and Switching Functions: Basic postulates and fundamental theorems of Boolean algebra; Standard representation of logic functions – Sum of Product (SOP) and Product of Sum (POS) forms; NAND and NOR Implementation - Simplification of switching functions– Karnaugh Maps and Quine- McCluskey tabular methods.

**Module 3**

Combinational Logic Design: Adders/subtractors, Fast adder, Magnitude comparator, Multiplexer Demultiplexer, Encoders, Decoders, Multiplier, and Parity generator and Checker, Standard IC Data Sheets and its Descriptions, HDL implementation of combinational circuits.

**Module 4**

Synchronous Sequential circuits: Bistable elements, Latches and flip flops- S-R, JK, D and Master- Slave JK FF, Analysis and Design of Clocked Sequential Circuits, State Minimization and State Assignment, Shift Registers, Counters. HDL implementation of sequential circuits.

**Module 5**

Asynchronous Sequential Circuits: Design and Analysis of asynchronous sequential circuits: Fundamental Mode, Flow Table, cycles, races, and Hazard- Static and Dynamic.

**Module 6**

Finite State Machine Design: Design and Analysis of Moore/Mealy FSM Models, State reduction, Algorithmic State Machines (ASM), System Design Applications: Vending Machine and Traffic Light Controller.

**6. Learning Resources****6.1 Text Book**

- M. Morris Mano and Michael D. Ciletti, "Digital Design: With an Introduction to the Verilog HDL VHDL, and System Verilog, Sixth Edition, Pearson, 2018.
- Wakerly, John, Digital Design: Principles and Practice (5th edition), Pearson, 2021.

**6.2 Reference Books & Web resources**

- D. D. Givone, Digital Principles and Design, Tata Mc-Graw Hill, New Delhi, 2017.
- Charles. H. Roth, Jr., Fundamentals of Logic Design, Enhanced Seventh Edition, 2020
- Thomas L. Floyd, Digital Fundamentals, 11th Edition, Pearson, 2015
- William I. Fletcher, "An Engineering Approach to Digital Design, 1st Edition reprint 2015.

**1. Preamble**

Electronic Devices is a core course that introduces semiconductor materials and the operating principles of electronic devices used in modern electronic systems. The course provides knowledge on PN junction diodes, transistors, field effect devices, optoelectronic devices, and power devices. It develops the ability to analyze device characteristics and select suitable devices for practical electronic applications. The course forms the foundation for analog electronics, VLSI, and communication systems.

**2. Prerequisite**

Nil

**3. Course Outcomes**

After the successful completion of the course, students will be able to

**1. Preamble**

This laboratory serves as the practical counterpart to the theory course by providing students with hands-on experience in designing, implementing, testing, and verifying digital circuits using real hardware platforms. It bridges the gap between theoretical concepts and practical applications by enabling students to analyze and validate the behavior of logic gates, combinational circuits, and sequential systems under actual operating conditions.

**2. Prerequisite**

Nil

**3. Course Outcomes**

On the successful completion of the course, students will be able to

| COs | Course Outcome 1 (CO1)                                                                                                                                                 | TCE Proficiency Scale | Performance Indicators | SDG Addressed | SDG Level |

**Preamble**

This course aims to provide the students with basic practical knowledge in chemistry. The objective of this course is to develop students' intellectual and psychomotor skills by providing hands-on experience in quantitative analysis, electrochemistry, physicochemistry, photocolourimetry, and green nanomaterial synthesis techniques.

**Prerequisite**

NIL

**Course Outcomes**

On the successful completion of the course, students will be able to

| COs | Course Outcome                                                                                                                                                                       | TCE Proficiency Scale | Performance Indicators | SDG Addressed                                   | SDG Level |
|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|------------------------|-------------------------------------------------|-----------|
| CO1 | Operate pH meters, conductivity bridges, colorimeters, potentiometric systems, and volumetric apparatus to determine physicochemical properties of engineering samples.              | TPS 3                 | 5.2.1                  | SDG 9 – Industry, Innovation and Infrastructure | 2         |
| CO2 | Measure readings from volumetric, and instrumental methods to determine concentration of chemical and water samples.                                                                 | TPS 3                 | 4.1.2                  | SDG 6 – Clean Water and Sanitation              | 2         |
| CO3 | Demonstrate precise laboratory techniques, including pipetting, burette handling, endpoint detection, calibration, and solution preparation during quantitative chemical analysis.   | TPS 3                 | 5.3.1                  | SDG 4 – Quality Education                       | 2         |
| CO4 | Apply laboratory safety procedures, chemical handling practices, and waste disposal protocols during analytical and electrochemical experiments.                                     | TPS 3                 | 6.4.1                  | SDG 12 – Responsible Consumption and Production | 2         |
| CO5 | Demonstrate structured laboratory reports by interpreting observations, calculations, graphs, error analysis, and experimental conclusions using scientific documentation practices. | TPS 3                 | 9.1.2                  | SDG 4 – Quality Education                       | 2         |
| CO6 | Apply collaborative responsibilities ethically during experimentation, data recording, analysis, and laboratory discussions.                                                         | TPS 3                 | 8.2.1                  | SDG 16 – Peace, Justice and Strong Institutions | 2         |
| CO7 | Analyse deviations and experimental errors in titrimetric, electrochemical, and instrumental methods, and recommend                                                                  | TPS 4                 | 4.3.1                  | SDG 9 – Industry, Innovation and Infrastructure | 2         |

|     |                                                                                                                                                           |       |       |                                                 |   |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------|-------|-------|-------------------------------------------------|---|
|     | corrective measures to improve analytical accuracy.                                                                                                       |       |       |                                                 |   |
| CO8 | Evaluate electrochemical behaviour, corrosion characteristics, and electroplating efficiency of metallic systems using modern electrochemical techniques. | TPS 5 | 3.3.1 | SDG 9 – Industry, Innovation and Infrastructure | 2 |

#### Assessment Pattern: Cognitive Domain

| Type of Assessment          | Component                                                                 | Marks      | Remarks                                                                                                                              |
|-----------------------------|---------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Continuous Assessment       | Pre-Lab, In-Lab, and Post-Lab Activities                                  | 75         | Conducted throughout the semester as per laboratory assessment framework and openness levels specified in the curriculum guidelines. |
| Model Test                  | CO-wise Assessment covering Cognitive, Psychomotor, and Affective Domains | 25         | Mid-semester / End-semester internal practical assessment using structured rubrics aligned with all three learning domains.          |
| <b>Total Internal Marks</b> |                                                                           | <b>100</b> | Continuous Assessment (75) + Model Test (25).                                                                                        |
| End Semester Examination    | CO-wise Assessment covering Cognitive, Psychomotor, and Affective Domains | 100        | Conducted as per COE regulations and curriculum requirements using structured laboratory evaluation rubrics.                         |

#### List of Experiments with CO Mapping

| Sl. No. | Name of the Experiment                           | Level of Experiment | Objective(s)                                       | COs Addressed           |
|---------|--------------------------------------------------|---------------------|----------------------------------------------------|-------------------------|
| 1       | Estimation of Total Hardness of Water            | Level 1             | Instrumentation, Data Analysis, Psychomotor Skills | CO1, CO2, CO3, CO4, CO5 |
| 2       | Estimation of Calcium in a Milk Sample           | Level 1             | Experimentation, Data Analysis, Psychomotor Skills | CO2, CO3, CO5, CO6      |
| 3       | Estimation of Chemical Oxygen Demand in Effluent | Level 2             | Experimentation, Data Analysis, Safety             | CO1, CO2, CO4, CO5, CO7 |
| 4       | Determination of the Surface Tension of a Liquid | Level 2             | Instrumentation, Models, Psychomotor Skills        | CO1, CO2, CO3, CO5      |
| 5       | Estimation of Antacid in a Tablet                | Level 1             | Experimentation, Data Analysis,                    | CO2, CO3, CO5           |

|    |                                                                                                                     |         |                                                             |                         |
|----|---------------------------------------------------------------------------------------------------------------------|---------|-------------------------------------------------------------|-------------------------|
|    |                                                                                                                     |         | Psychomotor Skills                                          |                         |
| 6  | Estimation of Acid Strength in Citrus Fruit                                                                         | Level 1 | Experimentation, Data Analysis, Psychomotor Skills          | CO2, CO3, CO5, CO6      |
| 7  | Determination of the Molecular Weight of a Polymer by the Ostwald Viscometer                                        | Level 2 | Models, Instrumentation, Data Analysis                      | CO1, CO2, CO5, CO7      |
| 8  | Estimation of Acidic Impurities in Soft Drinks by the Conductometric Method                                         | Level 2 | Instrumentation, Data Analysis, Learn from Failure          | CO1, CO2, CO5, CO7      |
| 9  | Estimation of the pH of a Soil Sample                                                                               | Level 1 | Instrumentation, Psychomotor Skills, Data Analysis          | CO1, CO3, CO4, CO5      |
| 10 | Estimation of Fe <sup>2+</sup> using the Potentiometric Method                                                      | Level 2 | Instrumentation, Experimentation, Data Analysis             | CO1, CO2, CO5, CO7      |
| 11 | Green Synthesis of Plasmonic Silver Nanoparticles Using Plant Extract and Quantitative Analysis by Photocolorimetry | Level 2 | Instrumentation, Experimentation, Data Analysis, Creativity | CO1, CO2, CO5, CO7, CO8 |
| 12 | Estimation of the rate of Corrosion of a Metal Specimen by Electrochemical Method                                   | Level2  | Instrumentation, Experimentation, Data Analysis,            | CO1, CO2, CO5, CO7, CO8 |

**1. Preamble**

The Tamil language is not merely a tool for communication; it is a repository of the knowledge, way of life, and scientific thought of the Tamil people, spanning millennia.

Today, Tamils are making their mark in the realms of computing and the internet. Their contributions are immense, ranging from leading global technology companies to playing pivotal roles in Artificial Intelligence (AI) and space exploration (ISRO/NASA). Simultaneously, the development of 'Computational Tamil' and internet-based Tamil is gaining momentum, ensuring the language is passed on to the next generation.

The technological acumen of the Tamil people did not emerge overnight; it is ingrained in their very DNA. By cherishing tradition, embracing innovation, and keeping pace with global technological advancements, Tamils continue to stand as pioneers.

## 5. Syllabus

### Module 1:

Weaving Industry Sangam Age – Ceramic Technology – Black and Red Ware Potteries (BRW)- Graffiti on Potteries.

### Module 2:

Designing and Structural Construction House & Designs in Household materials during Sangam Age – Building materials and Hero stone of Sangam age – Details of Stage Constructions in Silappathikaram – sculptures and Temples of Mamallapuram- Great Temples of Cholas and other Worship places- Temples of Nayaka Period- Type study (Madurai Meenakshi Temple)- Thirumalai Nayakar Mahal – Chetti Nadu House, Indo-Saracenic Architecture at Madras during British Period.

### Module 3:

Art of Ship Building – Metallurgical studies – iron industry –iron smelting, steel – Copper and gold- Coins as source of history – Minting of Coins – Beads making – industries Stone beads- Glass beads-Terracotta beads – Shell beads / bone beads – Archeological evidences- Gem stone types described in Silappathikaram.

### Module 4:

Dam, Tank, Ponds, Stairs, Signification of Kumizhi Thoopu of Chola Period, Animal Husbandry-Wells designed for cattle use – Agriculture and Agro Processing – Knowledge of Sea – Fisheries-Pearl-Conch diving –Ancient Knowledge of Ocean – Knowledge Specific Society.

### Module 5:

Development of Scientific Tamil – Tamil computing – Digitalization of Tamil Books- Development of Tamil Software – Tamil Virtual Academy – Tamil Digital Library – Online Dictionaries – Sorkuvai Project.

### 1. Preamble

This course introduces students to the core habits of structured problem solving. Through algorithmic thinking exercises across numeric, visual, and word-puzzle formats, students learn to decompose problems, identify patterns, and design solution strategies that transfer to both academic problem solving and early recruitment-test contexts.

### 2. Course Outcomes

*After the successful completion of the course, students will be able to:*

| <b>No.</b> | <b>Course Outcome</b>                                                          | <b>TPS Level</b> | <b>Performance Indicator</b> | <b>CO Weightage</b> |
|------------|--------------------------------------------------------------------------------|------------------|------------------------------|---------------------|
| <b>CO1</b> | Explain the principles of algorithmic thinking and structured problem solving. | TPS2             | 3.3.1                        | 20%                 |
| <b>CO2</b> | Apply quantitative reasoning techniques to numeric problems.                   | TPS3             | 2.1.2                        | 20%                 |
| <b>CO3</b> | Use visual pattern recognition to solve diagram-based puzzles.                 | TPS3             | 2.1.2                        | 20%                 |
| <b>CO4</b> | Identify shortest-path and optimization strategies in problem solving.         | TPS3             | 2.4.1                        | 20%                 |
| <b>CO5</b> | Solve complex word puzzles by decomposing them into smaller logical units.     | TPS4             | 2.2.1                        | 20%                 |

### 3. Assessment Pattern

| <b>CO</b>    | <b>CA1 (% of Marks)</b> | <b>CA2 (% of Marks)</b> | <b>Terminal Exam (% of Marks)</b> |
|--------------|-------------------------|-------------------------|-----------------------------------|
| <b>CO1</b>   | 50                      | —                       | 10                                |
| <b>CO2</b>   | 50                      | —                       | 10                                |
| <b>CO3</b>   | —                       | 50                      | 20                                |
| <b>CO4</b>   | —                       | 50                      | 20                                |
| <b>CO5</b>   | —                       | —                       | 40                                |
| <b>Total</b> | <b>100</b>              | <b>100</b>              | <b>100</b>                        |

The assessment will be conducted by the Training Team, and the marks will be submitted by the respective faculty in charge.

#### **4. Syllabus**

##### **Module 1: Introduction to Problem Solving and Algorithmic Thinking**

Problem-solving framework – Algorithmic mindset – Decomposition – Pattern recognition

##### **Module 2: Thinking with Numbers**

Numeric reasoning – Quantitative pattern recognition – Mental shortcuts

##### **Module 3: Thinking with Visual**

Diagram-based reasoning – Visual patterns – Figure analogies and series

##### **Module 4: Shortest Path**

Shortest-path problems – Optimisation – Route and grid problems

##### **Module 5: Word Puzzles (Part 1 & 2)**

Lateral thinking – Word arrangement – Logical inference puzzles – Brain teasers

#### **5. Learning Resources**

##### **5.1 Text Book**

George Polya — "How to Solve It", Princeton University Press.

##### **5.2 Reference Books & Web Resources**

1. R. G. Dromey — "How to Solve It by Computer", Pearson.
2. Edward de Bono — "Lateral Thinking: A Textbook of Creativity", Penguin.
3. Arun Sharma — "How to Prepare for Logical Reasoning", McGraw Hill.

#### **6. Course Designer(s)**

1. Mr. S. A. R. Sheik Masthan, Asst. Professor, Mechatronics, [sarsmech@tce.edu](mailto:sarsmech@tce.edu)
2. Dr. R. Rajan Praksah, Associate Professor, EEE, [r\\_rajjanprakash@tce.edu](mailto:r_rajjanprakash@tce.edu)
