

CURRICULUM AND DETAILED SYLLABI FOR

B.E DEGREE (Civil Engineering) PROGRAMME

FIRST SEMESTER TO EIGHTH SEMESTER

For the Students admitted from the academic year 2022-2023 onwards

THIAGARAJAR COLLEGE OF ENGINEERING

(A Government Aided Autonomous Institution affiliated to Anna University)

MADURAI – 625 015

Approved in 65th Academic Council Meeting on 27.05.2023

THIAGARAJAR COLLEGE OF ENGINEERING, MADURAI – 625 015
DEPARTMENT OF CIVIL ENGINEERING

I) Vision

To establish process of learning to meet the global standards for sustainable built environment

II) Mission

We are committed to:

- Provide quality education through innovation in teaching and learning practices meeting the global standards
- Encourage faculty and students to carry out socially relevant and forward looking research
- Offer consultancy services using state of the art facilities fulfilling the needs of the industry and society
- Enable our students, faculty and staff to play leadership roles for the betterment of the society in a sustainable manner
-

III) Programme Educational Objectives (PEOs) for B.E Civil Engineering programme:

PEO1. Graduates of the programme will contribute to the development of sustainable Infrastructure for the betterment of society

PEO2. Graduates of the programme, as an employee of an organization or as an employer, will continuously update their domain knowledge for continuous professional development with focus on research & development and industry interaction

PEO3 Graduates of the programme will accept and create innovations in providing solution for sustainable built environment

PEO4 Graduates of the programme will discharge their duties as professional Civil Engineers with quality and ethics

IV) Programme Specific Outcomes (PSO) for B.E Civil Engineering programme

Graduating Students of B.E. Civil Engineering programme will be able to:

PSO 1: Investigate, Analyze, Plan and Design the problems in multi various domains of civil engineering

PSO 2: Work with ethical principles and sound managerial skills in the promotion of civil engineering infrastructure keeping in mind, health, safety and sustainability of the society

Programme Outcomes (POs) of B.E. (Civil Engineering)

Graduating Students of B.E. Civil Engineering programme will:

1. Engineering Knowledge: Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
2. Problem Analysis: Identify, formulate, research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
3. Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
4. Conduct investigations of complex problems using research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of information to provide valid conclusions.
5. Modern Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. The Engineer and Society: Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice.
7. Environment and Sustainability: Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development.
8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.
9. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings.
10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions.
11. Project Management and Finance: Demonstrate knowledge and understanding of engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. Life-long Learning: Recognize the need for and have the preparation and ability to Engage in independent and life- long learning in the broadest context of technological Change.

Consistency of PEOs with POs of the programme

PEO /PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

PROCEDURE FOR AWARDING MARKS FOR INTERNAL ASSESSMENT

For all the theory courses, laboratory courses, theory courses with laboratory component and project work the continuous assessment shall be awarded as per the procedure given below:

THEORY COURSES

Two assessments each carrying 100 marks shall be conducted during the semester by the Department / College concerned. The total marks obtained in all assessments put together out of 200, shall be proportionately reduced for 40 marks and rounded to the nearest integer (This also implies equal weightage to the two assessments).

Assessment I (100 Marks)		Assessment II (100 Marks)		Total Internal Assessment
Individual Assignment / Case Study / Seminar / Mini Project / any other experiential Learning	Written Test	Individual Assignment / Case Study / Seminar / Mini Project / any other experiential Learning	Written Test	
40	60	40	60	200*

**The weighted average shall be converted into 40 marks for internal Assessment.*

A minimum of two internal assessments will be conducted as a part of continuous assessment. Each internal assessment is to be conducted for 100marks and will have to be distributed in two parts viz., Individual Assignment/Case study/Seminar/Mini project and Test with each having a weightage of 40% and 60% respectively. The tests shall be in written mode. The total internal assessment marks of 200 shall be converted into a maximum of 40 marks and rounded to the nearest integer.

LABORATORY COURSES

The maximum marks for Internal Assessment shall be 60 marks in case of practical courses. Every practical exercise / experiment shall be evaluated based on conduct of experiment / exercise and records are to be maintained. There shall be at least one test. The criteria for arriving at the Internal Assessment marks of 60 is as follows: 75 marks shall be awarded for successful completion of all the prescribed experiments done in the Laboratory and 25marks for the test. The total mark shall be converted into a maximum of 60 marks and rounded to the nearest integer.

Internal Assessment (100 Marks)*	
Evaluation of Laboratory Observation, Record	Test
75	25

** Internal assessment marks shall be converted into 60 marks*

THEORY COURSES WITH LABORATORY COMPONENT / LABORATORYCOURSES WITH THEORYCOMPONENT

Weightage of internal assessment and end semester Examination marks will be 50% each. The distribution of marks for the theory and laboratory components in the internal assessments and end semester Examination for different types of courses are provided in the table.

<i>L</i>	<i>T</i>	<i>P</i>	<i>C</i>	<i>Internal</i>		<i>End semester Examination</i>
				<i>Assessment 1</i>	<i>Assessment 2</i>	
1	0	4	3	Laboratory (25%)	Theory (25%)	Laboratory only (50%)
1	0	2	2	Laboratory (25%)	Theory (25%)	Laboratory only (50%)
2	0	2	3	Theory (25%)	Laboratory (25%)	Theory (25%) Laboratory (25%)
3	0	2	4	Theory (25%)	Laboratory (25%)	Theory (35%) Laboratory (15%)
2	0	4	4	Theory (25%)	Laboratory (25%)	Theory (15%) Laboratory (35%)

The procedure for the conduct of internal assessments for theory and laboratory components shall be as per the clause 12.1 and 12.2 respectively.*

The weighted average shall be converted into 50 marks for internal Assessment.

** Autonomous Colleges may adopt Theory courses with Laboratory component and Laboratory courses with Theory component with different L T P C formats and the weightage of marks for Theory and Laboratory components may be fixed in proportion to lecture and practical contact periods. However, the weightage for internal and end semester Examination marks will remain as 50% each.*

PROJECT WORK / INTERNSHIP AND LABORATORY COURSES

For the Project Work / Internship and Laboratory Courses fixed grading procedure shall be followed.

PASSING REQUIREMENTS

A student who secures not less than 50% of total marks prescribed for the course [Internal Assessment + End semester University Examinations] with a minimum of 45% of the marks prescribed for the end-semester University Examination, shall be declared to have passed the course and acquired the relevant number of credits. This is applicable for both theory and laboratory courses (including project work).

If a student fails to secure a pass in a theory course / laboratory course (except electives), the student shall register and appear only for the end semester Examination in the subsequent semester. In such case, the internal assessment marks obtained by the student in the first appearance shall be retained and considered valid for all subsequent attempts till the student secures a pass. However, from the third attempt onwards if a student fails to obtain pass marks (IA + End Semester Examination), then the student shall be declared to have passed the Examination if he/she secures a minimum of 50% marks prescribed for the University end semester Examinations alone.

AWARD OF LETTER GRADES

The award of letter grades will be decided based on relative grading principle. The relative grading is applicable to ONLY those students who have passed the Examination as per the passing requirements enumerated above. For those students who have not passed the Examination, Reappearance (U) shall be awarded as shown in the below Table.

For those students who have passed the course, the relative grading shall be done. The marks of those students who have passed only shall be inputted in the software developed for relative grading. The evolved relative grading method normalizes the results data using the BOX-COX transformation method and computes the grade range for each course separately and awards the grade to each student. For a given course, if the students' strength is greater than 30, the relative grading method shall be adopted. However, if the students' strength is less than or equal to 30 then the fixed grading shall be followed with the grade range as specified below.

O	A+	A	B+	B	C	U
91 - 100	81 - 90	71 - 80	61 - 70	56 - 60	50 – 55	< 50

The performance of a student shall be reported using letter grades, each carrying certain points as detailed below:

Letter Grade	Grade Points*
O (Outstanding)	10
A+ (Excellent)	9
A (Very Good)	8
B+(Good)	7
B (Average)	6
C (Satisfactory)	5
U (Re-appearance)	0
SA (Shortage of Attendance)	-
WD (Withdrawal)	-

A student is deemed to have passed and acquired the corresponding credits in a particular course if he/she obtains any one of the following grades: “O”, “A+”, “A”, “B+”, “B”, “C”.

‘SA’ denotes shortage of attendance and hence prevented from writing the end semester Examinations. ‘SA’ will appear only in the result sheet.

“U” denotes that the student has failed to pass in that course. “WD” denotes **withdrawal** from the exam for the particular course. The grades U and WD will figure both in the Grade Sheet as well as in the Result Sheet. In both cases, the student has to appear for the End Semester Examinations.

If the grade U is given to **Theory Courses/ Laboratory Courses** it is **not required to satisfy** the attendance requirements, but has to appear for the end semester Examination and fulfil the passing requirements to earn a pass in the respective courses.

If the grade U is given to **EEC (Employability Enhancement Course) (except Project Work)**, which are **evaluated only through internal assessment**, the student shall register for the course again in the subsequent semester, fulfil the passing requirements to earn pass in the course. However, attendance requirement need not be satisfied.

CLASSIFICATION OF THE DEGREE AWARDED FIRST CLASS WITH DISTINCTION

A student who satisfies the following conditions shall be declared to have passed the Examination in **First class with Distinction**:

- Should have passed the Examination in all the courses of all the eight semesters (10 Semesters in case of Mechanical (Sandwich) and 6 semesters in the case of Lateral Entry) in the student's First Appearance within **five** years (Six years in the case of Mechanical (Sandwich) and Four years in the case of Lateral Entry). Withdrawal from Examination will not be considered as an appearance.
- Should have secured a CGPA of not less than **8.50**.
- One year authorized break of study (if availed of) is included in the five years (Six years in the case of Mechanical (Sandwich) and four years in the case of lateral entry) for award of First class with Distinction.
- Should NOT have been prevented from writing end semester Examination due to lack of attendance in any semester.

FIRST CLASS:

A student who satisfies the following conditions shall be declared to have passed the Examination in **First class**:

- Should have passed the Examination in all the courses of all eight semesters (10 Semesters in case of Mechanical (Sandwich) and 6 semesters in the case of Lateral Entry) **within five years**. (Six years in case of Mechanical (Sandwich) and Four years in the case of Lateral Entry).
- One year authorized break of study (if availed of) or prevention from writing the End Semester

Examination due to lack of attendance (if applicable) is included in the duration of five years (Six years in case of Mechanical (Sandwich) and four years in the case of lateral entry) for award of First class.

- Should have secured a CGPA of not less than **6.50**.

SECOND CLASS:

All other students who qualify for the award of the degree shall be declared to have passed the Examination in **Second Class**.

The corresponding specific changes are to be made to B.Arch. / M.Arch. / M.Plan. / MBA / M.Sc.(5years).

22MA110	CALCULUS FOR ENGINEERS

Category	L	T	P	Credit
BSC	3	1	0	4

Preamble

This course aims to provide technical competence of modeling engineering problems using calculus. This course implements the calculus concepts geometrically, numerically, algebraically and verbally. Students will apply the main tools for analyzing and describing the behavior of functions of single and multi-variables: limits, derivatives, integrals of single and multi-variables to model and solve complex engineering problems using analytical methods and MATLAB.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO's	Course Outcomes	TCE Proficiency Scale	Expected Proficiency in %	Expected Attainment Level %
CO1	Cognize the concept of functions, limits and continuity	TPS2	75	70
CO2	Compute derivatives and apply them in solving engineering problems	TPS3	70	65
CO3	Employ partial derivatives to find maxima minima of functions of multi variables	TPS3	70	65
CO4	Demonstrate the techniques of integration to find the surface area of revolution of a curve.	TPS3	70	65
CO5	Utilize double integrals to evaluate area enclosed between two curves.	TPS3	70	65
CO6	Apply triple integrals to find volume enclosed between surfaces	TPS3	70	65

* Assignment 1: (i) Application Problems in CO1, CO2 and CO3 (50%).

(ii) MATLAB Onramp & Introduction to symbolic Math with MATLAB (50%).

** Assignment 2: (i) Application Problems in CO4, CO5 and CO6 (50%).

(ii) Application problems using MATLAB. (50%).

*** Terminal examination should cover all Course Outcomes in the appropriate TPS Scale level.

Syllabus**DIFFERENTIAL CALCULUS**

Functions - New functions from old functions - Limit of a function - Continuity - Limits at infinity - Derivative as a function - Maxima and Minima of functions of one variable – Mean value theorem - Effect of derivatives on the shape of a graph- Application problems in engineering using MATLAB.

FUNCTIONS OF SEVERAL VARIABLES

Function of several variables- Level curves and level surfaces - Partial derivatives – Chain rule - Maxima and minima of functions of two variables –Method of Lagrange's Multipliers - Application problems in engineering using MATLAB.[9 hours]

INTEGRAL CALCULUS:

The definite integral – Fundamental theorem of Calculus – Indefinite integrals and the Net Change Theorem – Improper integrals – Area of surface of revolution - Volume of solid of revolution - Application problems in engineering using MATLAB.

MULTIPLE INTEGRALS:

Iterated integrals-Double integrals over general regions-Double integrals in polar coordinates-Applications of double integrals (density, mass, moments & moments of inertia problems only)-triple integrals- triple integrals in cylindrical coordinates- triple integrals in spherical coordinates-change of variables in multiple integrals - Application problems in engineering using MATLAB.

Syllabus**Mechanics of Particles:**

Scalars and vectors under rotation transformation - Coordinate system - Cartesian, Polar, Spherical, Cylindrical - Newton's second law of motion - Forces in nature - Central forces - Conservative and non-conservative forces - Work - Energy theorem - Conservation of angular momentum - Satellite manoeuvres

Oscillations and Waves:

Simple harmonic oscillators - Energy decay in a Damped harmonic oscillator - Q factor- Impedance matching- Wave groups and group velocity - Non dispersive Transverse and Longitudinal waves - Waves with dispersion - Water waves - Acoustic waves - Earthquake and Tsunami waves

Quantum Mechanics:

Wave nature of particles - wave function - probability current density and expectation values - Schrodinger wave equation - Uncertainty principle - Particle in a box in 1D - Linear harmonic oscillator - Quantum tunnelling – Quantum confinement in 0D, 1D, 2D systems - Scanning tunnelling microscope - Quantum Cascade lasers - Quantum computation (qubit) - Entanglement - Teleportation

Electromagnetic Fields and Waves:

Electric potential and Electric field of a charged disc - Magnetic Vector potential - Maxwell's equation - Equation of continuity – Poynting Vector - Energy and momentum of EM waves - CT/MRI scan

Optics:

Ray paths in inhomogeneous medium and its solutions – Applications - Fibre optics - Numerical Aperture & Acceptance angle - Fibre optic sensors - Liquid Level & Medical Applications - Interference in non-reflecting films - Fabry-Perot interferometer - Diffraction - Fraunhofer diffraction due to double slit

22CH130	CHEMISTRY

Category	L	T	P	Credit
BSC	3	0	0	3

Preamble

The objective of this course is to bestow basic concepts of chemistry and its applications in engineering domain. It imparts knowledge on properties and treatment methods of water, spectroscopic techniques and their applications. This course provides exposure on electrochemical techniques for corrosion control, surface coatings and energy storage devices and also emphasis the properties and applications of engineering materials.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO	Course Outcome	TCE Proficiency Scale	Expected Proficiency in %	Expected Attainment Level %
CO1	Explain the essential water quality parameters of water	TPS2	70	70
CO2	Determine hardness of water and identify suitable water treatment method	TPS3	70	70
CO3	Explain the electrochemical process involved in energy storage devices and corrosion of metals	TPS2	70	70
CO4	Interpret the electrochemical principles in modern energy storage devices and corrosion control methods	TPS3	70	70
CO5	Identify the appropriate spectroscopic technique for various applications	TPS3	70	70
CO6	Select the materials based on the properties for Engineering applications	TPS3	70	70

Syllabus

Water: Water-sources- physical - characteristics - alkalinity - hardness of water – types -determination of hardness by EDTA method. Boiler trouble-Softening of water:Internal and External treatment methods. Waste water treatment process. **Electrochemical technologies for energy storage and surface engineering:** Electrochemistry and Energy storage: Basics of electrochemistry. Batteries - Primary and Secondary batteries. Fuel cells.Hydrogen generation and storage. Corrosion and Surface Engineering–Basics –Corrosion - causes- factors- types - corrosion of metal and computer components- Corrosion control. Electroplating - Electroless process. **Spectroscopic technique and applications:** Principle, instrumentation, and applications: X-ray-diffraction - UV–Visible spectroscopy- Atomic Absorption Spectroscopy - Fluorescence spectroscopy - Inductively Coupled Plasma - Optical Emission Spectroscopy- Infra-red spectroscopy - Nuclear magnetic resonance spectroscopy. **Engineering materials:** Bonding and their influences on the property of materials - melting point - brittleness, ductility – thermal, electrical, and ionic conductivity - optical – magnetic properties, hydrophobic, hydrophilic. **Polymer composites** - structure and properties-applications.**Ceramics and advanced ceramics** - types-properties-applications-**Nano-materials** – Synthesis, structure, and properties –applications.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Periods
1	Water	
1.1	Importance of water, sources, standards for drinking water, (WHO, BIS & ICMR standards) physical, chemical & biological characteristics, Alkalinity (principle only)	1
1.2	Hardness of water - types, units. Determination of hardness by EDTA method and numerical problems	2
1.3	boiler trouble: Scale and sludge formation, boiler corrosion, priming and foaming, caustic embrittlement	1
1.4	Internal treatment methods: Carbonate, Phosphate, Colloidal, Calgon conditioning	1
1.5	softening of water: External treatment methods: Lime-soda process (concept only), zeolite process, ion exchange process	2
1.6	Desalination- reverse osmosis, electro dialysis, solar and multistage flash distillation, nano-filtration	1
1.7	Waste water treatment – primary, secondary, and tertiary treatment	1
2	Electrochemical technologies for energy storage and surface engineering	
2.1	Electrochemistry and Energy storage: Introduction–Basics of electrochemistry – Redox process, EMF	1
2.2	Energy storage – Batteries, Battery quality parameters	1
2.3	Primary battery – Dry cell and Alkaline cell	1
2.4	Secondary battery – Lead-acid battery, Lithium-ion battery	1
2.5	Fuel cells – Fundamentals, types and applications. Hydrogen generation and storage	1
2.6	Corrosion and Surface Engineering- Basics –Corrosion - causes- factors- types	1
2.7	chemical, electrochemical corrosion (galvanic, differential aeration), corrosion of metal and computer components-	1
2.8	Corrosion control - material selection and design aspects - electrochemical protection – sacrificial anode method and impressed current cathodic method	1
2.9	Electroplating –Introduction, Process, Applications (Gold and nickel plating). Electroless plating – Principle, process, Applications (PCB manufacturing)	1
3	Spectroscopic technique and applications	
3.1	Introduction to Electromagnetic Radiation, Types of atomic and molecular spectra	1
3.2	Principle, Instrumentation and Applications: X-ray-diffraction	1
3.3	UV–Visible spectroscopy, Atomic Absorption Spectroscopy	2
3.4	Fluorescence spectroscopy, Inductively Coupled Plasma - Optical	2

Module No.	Topic	No. of Periods
	Emission Spectroscopy	
3.5	Infra-red spectroscopy	2
3.6	Nuclear magnetic resonance spectroscopy – Magnetic resonance imaging	1
4	Engineering materials	
4.1	Bonding and its influence on the property of materials	1
4.2	Properties of materials- melting point - brittleness, ductility - thermal, electrical and ionic conductivity	1
4.3	optical – magnetic properties, hydrophobic, hydrophilic	1
4.4	Polymer composites - structure and properties	1
4.5	applications -automotive, aerospace, marine, biomedical, and defense	1
4.6	Ceramics and advanced ceramics - types-properties	1
4.7	applications- medicine, electronics, and defense	1
4.8	Nano-materials – Synthesis	1
4.9	applications - sensors, drug delivery, and environmental pollution control	1
	Total	36

22EG140	TECHNICAL ENGLISH

Category	L	T	P	Credit
HSMC	2	0	0	2

Preamble

The course aims at fostering the students' ability to communicate effectively in various academic, professional, and social settings through oral and written forms. Besides imparting the basic skills such as Listening, Speaking, Reading and Writing (LSRW), significant emphasis is placed on enriching their analytical, descriptive, and creative skills, enabling them to develop and demonstrate a holistic English language proficiency.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency in %	Expected Attainment Level %
CO1	Relate the fundamentals of language in terms of vocabulary, grammar and pronunciation in technical communication.	Understand	60%	70%
CO2	Infer ideas from technical and general contexts by identifying main ideas, specific details, predicting and note-making.	Understand	60%	70%
CO3	Make use of language in professional and social contexts with clarity and conciseness.	Apply	60%	70%
CO4	Identify specific contexts in technical writing, where appropriate lexical and grammatical functions are applied	Apply	60%	70%
CO5	Develop the skills such as understanding, evaluating, analysing and summarising the text and graphical representations.	Apply	60%	70%
CO6	Organise ideas with coherence, cohesion and precision in formal written communication	Apply	70%	80%

* Assignment 1: Speaking activities in CO1, CO2, and CO3 (100%).

** Assignment 2: Writing activities in CO4, CO5, and CO6 (100%).

*** Terminal examination should cover all Course Outcomes in the appropriate TPS Scale level.

Syllabus:**MODULE- I - Basics of Language (CO1)**

Vocabulary - Word Building, Prefix, Suffix and Root Words, Basics of Grammar – Parts of Speech, Tenses, Phonetics - Phonemes, Syllables and Stress.

MODULE- II – Reading (CO2)

Reading - Skimming and Scanning of Short Comprehension Passages and Answering Questions or Cloze exercises based on the text prescribed for extensive reading, Note-Making.

MODULE- III – Functional English (CO3)

Framing Questions (WH and Yes/No), Modals, Manual Writing, Recommendations Writing, Agenda and Minutes of Meeting.

MODULE-IV – Technical Notions (CO4)

Technical Notions - Subject-Verb Agreement, Relative Clause, Phrasal Verbs, Impersonal Passive Voice, Noun Compounds, Classifications and Definitions, Cause and Effect, Purpose and Function, Numerical Adjectives.

MODULE-V – Analytical Writing and Business Correspondence (CO5 & CO6)

Summary Writing, Interpretation of Graphics, Jumbled Sentences, Paragraph Writing, Formal Letters (Seeking Permission for Industrial Visit/internship/Bonafide), E-mail Writing (BEC Vantage Writing Task I)

22ES150	ENGINEERING EXPLORATION	Category	L	T	P	Credit
		ESC	1	1	-	2

Preamble

The course Engineering Exploration provides an introduction to the engineering field. It is designed to help the student to learn about engineering and how it affects our everyday lives. On the successful completion of the course, students will be able to explain how engineering is different from science and technology and how science, mathematics and technology are an integral part of engineering design.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment
CO1	Explain technological & engineering development, change and impacts of engineering	TPS2	70	70
CO2	Draw a product in enough detail that others can accurately build it and write specification sheet for a given product	TPS3	70	70
CO3	Complete initial steps (Define a problem, list criteria and constraints, brainstorm potential solutions and document the ideas) in engineering design process	TPS3	70	70
CO4	Draw sketches to a design problem and provide a trade-off matrix	TPS3	70	70
CO5	Communicate possible solutions through drawings and prepare project report	TPS3	70	70
CO6	Apply the concept of engineering fundamentals in Civil and Mechanical, Engineering	TPS3	70	70

22ME160	ENGINEERING GRAPHICS	Category	L	T	P	Credit
		ESC	3	0	2	4

Preamble

Engineering Graphics is referred as language of engineers. An engineer needs to understand the geometry of any object through its orthographic or pictorial projections. The knowledge on engineering graphics is essential in proposing new product designs through drawings and in reading or understanding the existing drawings. This course covers orthographic and pictorial projections, sectional views, development of surfaces and use of computer aided drafting tools.

Prerequisite

Basic knowledge about geometry of objects.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcomes	TCE Proficiency Scale	Expected Proficiency in %	Expected Attainment Level %
C01	Draw the orthographic views of objects from the given isometric views and draw the orthographic projections of points.	TPS 3	70	70
CO2	Draw the orthographic projections (Elevation and Plan) of straight lines inclined to both reference planes.	TPS 3	70	70
CO3	Draw the orthographic projections (Elevation and Plan) of plane surfaces inclined to both reference planes.	TPS 3	70	70
CO4	Draw the orthographic projections (Elevation and Plan) of regular solids (Prisms, Pyramids, Cylinder and Cone) with axis inclined to any one-reference plane.	TPS 3	70	70
CO5	Draw the orthographic projections (Elevation and Plan) of sectioned solids (Prisms, Pyramids, Cylinder and Cone) and true shape of the sections.	TPS 3	70	70
CO6	Draw the development of surfaces (base and lateral) of sectioned regular solids (Prisms, Pyramids, Cylinder and Cone).	TPS 3	70	70
CO7	Draw the isometric projections of regular solids and combined solids (Prisms, Pyramids, Cylinder, Cone and Sphere) and convert the orthographic projections into isometric views.	TPS 3	70	70
CO8	Create computer-aided 3D models for the given drawing (2D/3D) and draw orthographic views for the 3D model with appropriate dimensioning using CAD package (Continuous Assessment only).	TPS 3	Continuous Assessment only

Remember / 1	100	
Understand / 2		
Apply / 3		100
Analyse / 4		
Evaluate / 5		
Create / 6		

Marks Allocation for Continuous Assessment:

Sl. No	Description	Marks
1	Submission of Plates (Drawing sheets) and Computer Aided Drafting (CAD) Exercises	60
2	Continuous Assessment Test (CAT)	40
Total		100

Question Pattern for Terminal Examination:

Question Number	Description	Type	Marks
1	Orthographic views from isometric view Or Projection of Points	Either or type	10
2	Projection of lines	Either or type	15
3	Projection of planes	Either or type	15
4	Projection of solids	Either or type	15
5	Section of solids	Either or type	15
6	Development of surfaces	Either or type	15
7	Isometric projections of combined solids Or Conversion of orthographic views into isometric view	Either or type	15
Total			100

Note:

1. **One test or two tests will be conducted locally by respective Faculty In - charges during regular class hours to account for continuous assessment test (CAT) marks.**
2. **Terminal examination (3 hrs) will be conducted centrally by the office of Controller of examinations.**

Syllabus

Introduction- Significance of engineering graphics, Use of drawing instruments, Standards, Lettering and dimensioning, Scales.

Orthographic Projection - Principles of orthographic projections, First angle projection, Orthographic projection of objects from pictorial views. Projection (Elevation and Plan) of points located in all quadrants.

Projection (Elevation and Plan) of straight lines in first quadrant, inclined to both reference planes by rotating line method.

Projection (Elevation and Plan) of plane surfaces in first quadrant, inclined to both reference planes by rotating object method.

Projection (Elevation and Plan) of regular solids (Prisms, Pyramids, Cylinder and cone) in first quadrant, by rotating object method when the axis is inclined to one of the reference planes.

Projection (Elevation and Plan) of sectioned solids (Prisms, Pyramids, Cylinder and cone) and true shape of the sections, when the axis of the solid is perpendicular to horizontal plane.

Development of base and lateral surfaces of sectioned regular solids (Prisms, Pyramids, Cylinder and Cone) with cutting plane inclined to HP only.

Isometric projection – Principle, isometric scale, Isometric views and Isometric projections of single simple solids. Combination of solids (Prisms, Pyramids, Cylinder, Cone and sphere -in simple vertical positions only). Conversion of orthographic projections (Elevation, Plan and Side view) of solid parts / engineering components into isometric views.

Computer Aided Drafting (For Continuous Assessment only):

Overview of Computer Graphics, list of computer technologies, impact on graphical communication. Demonstrating knowledge of the theory of CAD software such as: The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), Command Line, Status Bar, Different methods of zoom as used in CAD, Select and erase objects. Setting up of units and drawing limits. Dimensioning – Guidelines – ISO and ANSI standards for coordinate dimensioning - Defining local coordinate systems. Orthographic and isometric views.

Practice on drawing of 2 dimensional geometric patterns consisting of entities such as lines, arcs and circles. Practice on creation of 3 dimensional wire-frame and shaded models. Dimensioning in isometric and orthographic views.

Course Contents and Lecture Schedule

Sl.No	Topic	Lecture Hours	Practice Hours
1	Introduction- Significance of engineering graphics, Use of drawing instruments –Standards, Lettering and dimensioning, Scales	2	1
2	Orthographic Projection- Principles of orthographic projections, First angle projection, Orthographic projection of objects from pictorial views.	2	2
3	Projection (Elevation and Plan) of points located in all quadrants.	2	1
4	Projection (Elevation and Plan) of straight lines in first quadrant, inclined to both reference planes by rotating line method.	4	2
5	Projection (Elevation and Plan) of plane surfaces in first quadrant, inclined to both reference planes by rotating object method.	5	3
6	Projection (Elevation and Plan) of regular solids (Prisms, Pyramids, Cylinder and cone)in first quadrant, by rotating object method when the axis is inclined to one of the reference planes.	5	3
7	Projection (Elevation and Plan) of sectioned solids (Prisms, Pyramids, Cylinder and cone) and true shape of the sections, when the axis of the solid is perpendicular to horizontal plane.	4	2
8	Development of surfaces (base and lateral) of sectioned regular solids (Prisms, Pyramids, Cylinder and Cone)with cutting plane inclined to HP only.	4	2
9	Isometric projection – Principle, isometric scale, Isometric views and Isometric projections of single simple solids. Combined solids (Prisms, Pyramids, Cylinder, Cone and sphere -in simple vertical positions only). Conversion of orthographic projections (Elevation, Plan and Side view) of solid parts / engineering components into isometric views.	4	2

10	Computer Aided Drafting (For Continuous Assessment only): 10.1 Overview of Computer Graphics, list of computer technologies, impact on graphical communication. Demonstrating knowledge of the theory of CAD software such as: The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line, The Status Bar, Different methods of zoom as used in CAD, Select and erase objects. Setting up of units and drawing limits. Dimensioning– Guidelines – ISO and ANSI standards for coordinate dimensioning - Defining local coordinate systems. Orthographic and isometric views.	1	1
	10.2 –Practice on drawing of 2 dimensional geometric patterns consisting of entities such as lines, arcs and circles. Practice on creation of 3 dimensional wire-frame and shaded models. Dimensioning in isometric and orthographic views.	3	5
TOTAL		36	24

22EG170	ENGLISH LABORATORY	Category	L	T	P	Credit
		HSMC	0	0	2	1

This practical course enables the students to develop and evaluate their basic English language skills through individualized learning process at the Language Lab, using English Software and online resources. In addition, it facilitates students with the need-based student-centric presentation sessions in a multi-media driven classroom environment.

Prerequisite

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcomes	TCE Proficiency Scale
CO1	Interpret words correctly through listening and watching general and technical online contents	Understand
CO2	Develop appropriate pronunciation skills through listening and speaking practices	Apply
CO3	Build and apply a wide range of lexicons in general and technical presentations	Apply
CO4	Identify and apply the key ideas and spoken English features learnt through auditory and visual listening tools	Apply
CO5	Experiment with inventiveness by creating a blog, vlog, or YouTube channel.	Apply
CO6	Prepare and deliver oral and written presentations using digital tools.	Apply

Mapping with Programme Outcomes

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1									M	S		S
CO2									M	S		M
CO3								L	M	S		S
CO4								L	M	S		M
CO5								L	M	S		S
CO6								L	S	S		S

Assessment Pattern

- Students' performance will be assessed in the language lab/ classroom as given below:
 - Spoken Task - General / Technical Presentation / Picture Description: 20 Marks
 - Listening Task –(MCQs, Gap Filling Exercises) : 10 Marks
 - Written Test - Phonetics, Grammar, Vocabulary, Reading : 20 Marks

External: Online Exam- Phonetics, Grammar, Vocabulary, Reading (45 Minutes): 50 Marks
 Listening Test : 20 Marks
 Submission of Students' Record on Practical Tasks in the Class and Lab : 10 Marks
 BEC Vantage Speaking Tasks I and II : 20 Marks

List of Experiments

S.No	Topic	Hours
LAB ACTIVITIES (12 Hours)		
1	Listening to TED Talks/ Podcasts/ Product Advertisements/ News Bulletins.	2
2	Phonetics – Tutorials through Online Repositories, English Movie Clips and Software in the Lab(S-net)	2
3	Vocabulary Development through Movies / Short Films/ Documentaries	2
4	Language Development through English software S-net and Online Content (Tenses, Voices, SV Agreement, Prepositions, Coherence Markers, Relative Clauses, Modals, Punctuation)	2
5	Reading Comprehension – I (General / Technical, BEC Vantage Reading Task III)	2
6	Creating a Blog/Vlog/YouTube Channel–Uploading MP3/MP4– Practice (Movie/Book/ Gadget Review, General/Tech Talks, Interview with Celebrities)	1
7	Revision – Model Online Aptitude Test	1
CLASSROOM ACTIVITIES (12 Hours)		
8	Introduction of Spoken English Features	1
9	Self-introduction and Introducing others	1
10	Video Comprehension – Brainstorming and Note-Taking	2
11	Role-Play, Picture/Movie Description	1
12	Reporting the events from Media / Newspapers – Discussion	1
13	Interactive Games for Language Development	1
14	Reading / Note Making (Extensive Reading – News Paper Reports)	1
15	Presentation – I (Book /Movie Review, Story Telling, General Presentations)	2
16	Presentation – II (Technical Presentations)	2
Total		24

22PH180	PHYSICS LABORATORY

Category	L	T	P	Credit
BSC	0	0	2	1

Preamble

This course ensures that students are able to apply the basic physics concepts and carry out the experiments to determine the various physical parameters related to the material

- Learn the necessary theory to understand the concept involved in the experiment.
- Acquire the skills to carry out the experiment.
- Tabulate the observed data and use the formula to evaluate the required quantities.
- Plot the data in a graph and use it for calculation.

Prerequisite

- None

Course Outcomes

On the successful completion of the course, students will be able to

Cos	Course Outcome	TCE Proficiency Scale	Expected Proficiency (%)	Expected Attainment Level (%)
CO1	Analyze the mechanical & electrical oscillations and determine their resonance frequency	TPS3	85	90
CO2	Analyse the interference and diffraction patterns for micron sized objects	TPS3	85	90
CO3	Investigate the V-I characteristics of photodiode, phototransistor under dark and bright illumination conditions	TPS3	85	90
CO4	Determine the Planck's constant using LEDs	TPS3	85	90
CO5	Plot the VI characteristics of solar cell and find the fill factor	TPS3	85	90
CO6	Determine the reversibility of classical and quantum logic gates	TPS3	85	90
CO7	Identify the variation of magnetic field with distance for circular coils	TPS3	85	90

LIST OF EXPERIMENTS

1. Quantum Logic Gate-Toffoli gate
2. Study of Optoelectronic Devices- Photodiode, Phototransistor.
3. Solar cell VI characteristics, fill factor & Optical fibre -Determination of numerical aperture.
4. Torsional pendulum – Determination of rigidity modulus of wire and moment of inertia of regular objects.
5. Laser Diffraction - Determination of wave length of the laser using grating and determination of micro particle size.(Observing diffraction pattern due to single and double slit)
6. Air wedge – Determination of thickness of a thin sheet/wire.
7. Determination of Planck's constant through V-I characteristics of LED.
8. Determination of magnetic field-Stewart and Gees.
9. LCR Circuit – Determination of resonant frequency

22CH190	CHEMISTRY LABORATORY (COMMON TO ALL BRANCHES)

Category	L	T	P	Credit
BSC	0	0	2	1

Preamble

This course aims to provide the students, a basic practical knowledge in chemistry. The objective of this course is to develop intellectual and psychomotor skills of the students by providing hands on experience in quantitative, electrochemical and photo-chemical analysis.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO	Course Outcome	TCE Proficiency Scale
CO1	Estimate the chemical water quality parameters of sample water / effluent	TPS Apply
CO2	Demonstrate presence of calcium ions in milk sample	TPS Apply
CO3	Determine the surface tension of solvent mixtures	TPS Apply
CO4	Estimate pH and acid content of samples using pH metric and conductometric titrations	TPS Apply
CO5	Illustrate the strength of oxidisable materials present in given sample by potentiometric method	TPS Apply
CO6	Determine Fe^{2+} ion in effluent using colorimetric method	TPS Apply
CO7	Calculate the efficiency of electroplating	TPS Apply
CO8	Determine the rate of corrosion of metal & alloy using potentiodynamic polarisation method	TPS Apply

List of Experiments/Activities with CO Mapping

Experimental List	CO
Quantitative Analysis	
Estimation of total hardness of water sample	CO1
Estimation of COD of industrial effluent	CO1
Determination of calcium ion in milk sample	CO2

Determination of surface tension of solvent mixture	CO3
Electrochemical and Photochemical Analysis	
Determination of the Phosphoric acid content in soft drinks using conductometric titration	CO4
Determination of pH of soil by pH metric titration	CO4
Potentiometric redox titration ($K_2Cr_2O_7$ vs FAS, $KMnO_4$ vs FAS)	CO5
Estimation of iron content in water sample using colorimeter	CO6
Estimation of current density of electroplating process using Hull cell	CO7
Determination of rate of corrosion of metal and alloy using potentiodynamic polarization technique (TAFEL)	CO8

22CE210	MATRICES AND ORDINARY DIFFERENTIAL EQUATIONS

Category	L	T	P	C
BSC	3	1	-	4

Preamble

Matrix eigen value problems are extremely important while creating engineering models in designing bridges, communication systems and searching algorithms. This course introduces the concepts and applications of matrix eigen values, differentiation and integration of vector valued functions and ordinary differential equations in a broader approach to Civil engineers. Moreover, numerical techniques are effectively used to solve ordinary differential equations. This course provides the knowledge of the above concepts to all Engineers and apply them in their areas of specialization.

Prerequisite

22MA110 – Calculus for Engineers

Course Outcomes

On the successful completion of the course, students will be able to

CO	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the concept of rank of a matrix to check the consistency of a system.	TPS3	A	65
CO2	Diagonalize the matrix using eigen values and eigen vectors by means of transformations	TPS2	A	65
CO3	Compute the gradient, divergence and curl of scalar and vector functions.	TPS3	A	65
CO4	Apply the concepts of vector calculus to evaluate forces and moments.	TPS3	A	65
CO5	Solve the homogeneous and non-homogeneous differential equations using appropriate methods.	TPS3	A	65
CO6	Apply numerical techniques to solve ordinary differential equations.	TPS3	A	65

Syllabus

SYSTEM OF LINEAR EQUATIONS AND EIGEN VALUE PROBLEMS: Rank of a matrix - Consistency and Inconsistency of system linear of equations - Vectors - Eigen values and Eigen vectors - Properties of eigen values - Matrix of a Linear transformation - Reduction to diagonal form - Cayley-Hamilton theorem - Quadratic forms - Reduction to canonical form - Nature of quadratic forms.

VECTOR CALCULUS: Gradient, Divergence, Curl of a vector Field - Line Integrals of vector functions - Path independence of line integrals - Green's Theorem in the plane - Surface Integrals - Triple Integrals, Stoke's and Divergence Theorem of Gauss - Applications of the Divergence theorem.

SECOND ORDER HOMOGENEOUS ORDINARY DIFFERENTIAL EQUATIONS (ODEs): Homogeneous Linear ODEs of second order with constant coefficients - The Differential Operator - Euler Cauchy's Equations - Modelling of free oscillation of a mass spring system - Existence and uniqueness of solution by Wronskian - Non-homogeneous Linear ODE of second order - Solution by Variation of Parameters.

NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS: Single Step methods: Picard's method of successive Differentiation - Euler's method, Improved & Modified Euler's method - Multi-step methods: Runge-Kutta method of fourth order - Milne's and Adams Bashforth Predictor-corrector methods.

22CE220	ENGINEERING MECHANICS

Category	L	T	P	Credit
ESC	3	1	0	4

Preamble

A structure is made up of constituent elements like beam, column and membrane. The constituent elements should have adequate size to resist applied loads to build a safe structure. Their size is decided by material properties of the elements, particularly their strength. Fields like fracture mechanics, stress concentration, ductility, strength theories, fatigue, experimental stress analysis are few among a vast horde of new fields of study that have emerged from a renewed interest in Strength of Materials in twentieth century.

Prerequisite

Basic Concepts of Physics and Mathematics

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Solve practical problems through evaluating the laws of mechanics and also to apply equilibrium concepts	TPS3	A	70
CO2	Compute geometric properties of sections	TPS3	A	70
CO3	Understand and apply the concept of stress and strain to solve structural mechanics problem also transformation of stress	TPS3	A	65
CO4	Practice shear force and bending moment computations and construct shear force and bending moment diagrams	TPS3	A	65
CO5	Interpretation of bending and shear stresses for various sections	TPS3	A	65
CO6	Understand and apply the criterion of failure and for design according to various theories.	TPS3	A	65

Syllabus

Statics of Particles and Rigid Bodies; Laws of Mechanics - Lame's theorem, Parallelogram and triangular law of forces - Coplanar forces - Resolution and composition of forces - Equilibrium of a particle - Principle of transmissibility. Types of supports and reactions - Requirements of stable equilibrium - Moments and couples - Varignon's theorem - Equilibrium of rigid bodies. **Properties of surfaces:** First moment of area and centroid of sections - Second Moment of area - Moment of Inertia - Parallel Axis Theorem - Perpendicular axis theorem - Polar Moment of Inertia - Radius of Gyration - Principal moments of inertia. Spread sheets- Algorithm for developing spread sheet for calculating moment of inertia for composite section. **Simple Stresses and Strains :** Introduction, stress, strain, tensile, compressive and shear stress – Hooke's law – Young's modulus, rigidity modulus, Bulk modulus, Poisson's ratio, Volumetric strain, relationship between elastic constants. Thermal stress and strain. **Principal stresses and strains:** Analysis of plane stress and strain, principal stresses and strains – Mohr's circle. **Shear Force and Bending Moment:** Introduction, types of beams – cantilever, simply supported over hanging, fixed and continuous beams. Types of loads – concentrated load, uniformly distribute load, uniformly varying load and couples. Shear force and bending moment diagram for statically determinate beams (cantilever, simply supported and over hanging). Spread sheets- Algorithm for constructing SFD and BMD for statically determinate beam. **Bending and shear stresses:** bending stresses, shear stresses in various sections. **Theories of Failure:** Maximum principal stress theory-Maximum shear stress theory-shear strain energy theory.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Periods
1.0	Statics of Particles and Rigid Bodies	
1.1	Laws of Mechanics - Lamé's theorem, Parallelogram and triangular law of forces.	1
1.2	Coplanar forces - Resolution and composition of forces - Equilibrium of a particle - Principle of transmissibility	1
1.3	Types of supports and reactions - Requirements of stable equilibrium - Moments and couples - Varignon's theorem - Equilibrium of rigid bodies	2
	Tutorial	1
2.0	Properties of surfaces	
2.1	First moment of area and centroid of sections - Second Moment of area - Moment of Inertia	1
2.2	Parallel Axis Theorem - Perpendicular axis theorem - Polar Moment of Inertia - Radius of Gyration - Principal moments of inertia	1
	Tutorial	1
	Spread sheets- Algorithm for developing spread sheet for calculating moment of inertia for composite section	2
3.0	Simple stresses and strains	
3.1	Introduction to stress and strain, tensile, compressive and shear stress and strain .	1
3.2	Hooke's law ,Young's Modulus, Rigidity Modulus, Bulk Modulus, Poisson's Ratio .	2
3.3	Relationship between elastic constants , Stress-strain diagram for mild-steel, Elastic Limit	2
	Tutorial	1
	Principal stresses and strains	
3.4	Plane Stress and Plane Strain, Analytical method	2
3.5	Principal stresses and strains, Mohr's circle method	2
	Tutorial	1
4.0	Shear Force and Bending Moment	
4.1	Introduction to types of beams – Cantilever, Simply Supported, Overhanging, Fixed and, Continuous Beams Introduction to types of loads - Concentrated Load, Uniformly Distributed Load, Uniformly Varying Load, Couples	2
4.2	Shear Force and Bending Moment diagram for cantilever beams	1
4.3	Shear Force and Bending Moment diagram for simply supported beams.	2

Module No.	Topic	No. of Periods
4.4	Shear Force and Bending Moment diagram for overhanging beams.	2
	Tutorial	2
	Spread sheets- Algorithm for constructing SFD and BMD for statically determinate beam	2
5.0	Bending and shear stresses	
5.1	Bending stresses in various sections - (Rectangular, circular, flanged, angle, and channel cross-sections)	2
	Tutorial	2
5.2	Shear stress in various sections – (Rectangular, circular, flanged, angle, and channel cross-sections)	2
	Tutorial	2
6.0	Theories of Failure	
6.1	Maximum Principal Stress Theory	2
6.2	Maximum Shear Stress Theory	2
6.3	Shear Strain Energy Theory	2
	Tutorial	2
	Total (36+12)	48

22CE230	SURVEYING

Category	L	T	P	Credit
PCC	3	0	0	3

Preamble

Surveying is the process of determining by measurement, the relative positions of points on or near the earth surface. The data collected from survey is used in the preparation of plans, maps, profiles, charts and diagrams. In addition survey may be used for the delineation of property boundaries, computation of areas and volumes also to set out the proposed work on the ground.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Compute the linear measurements using chains, angular measurements using compass and omitted measurement	TPS 3	A	70
CO2	Understand the principles of plane table surveying & traverse.	TPS 3	A	70
CO3	Find the relative position of points on the ground using leveling principles, contouring- methods computation of areas and volume	TPS 3	A	65
CO4	Calculate the distance and heights of objects using tacheometric and trigonometric principle	TPS 3	A	65
CO5	Compute the elements of different types of curves and triangulation systems	TPS 3	A	65
CO6	Understand the principle of Total station and GPS	TPS 3	A	70

Syllabus

Introduction: Definition, classification of surveys, **Chain surveying:** Ranging and Chaining, obstacles in chaining. **Compass surveying:** Prismatic compass, Magnetic declination, local attraction. **Plane table surveying:** Accessories, plane table techniques. **Levelling:** Types of levels, temporary adjustments of a level, methods of levelling, fly levelling, longitudinal sectioning and cross sectioning, contouring. **Areas and Volumes:** Calculation of areas and volumes by mid-ordinate, average ordinate, trapezoidal and Simpson's methods **Tacheometric Survey:** Measurement of horizontal and vertical angle, Stadia, tangential and Trigonometrical levelling **Curves:** setting out of simple and compound curves. **Triangulation:** Types of triangulations, systems, figures, signals and baseline measurement. **Modern methods of Surveying:** Electronic Distance Measurement (EDM), Global Positioning System (GPS), Total station and its application.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours
1	Chain, Compass Surveying	
1.1	Classification of Survey, ranging, chaining and obstacles in chaining	1
1.2	Measurement of bearings and angles using compass, Local attraction and magnetic declination	1
1.3	Calculation of included angle	1
1.4	Local attraction	1
1.5	Omitted measurements	1
2	Plane table surveying:	
2.1	Accessories of plane table and their uses, plane table techniques	1
2.2	Radiation and intersection method	
2.3	Method of resection – Three-point problem	
2.4	Three point problem – Trial and error method, tracing paper	1

2.5	Three point problem – Bessel's method	1
2.6	Three point problem -Right angle method	
2.7	Method of resection – Two point problem	1
2.8	Traversing by using plane table	
3	Levelling	
3.1	Types of levels and its adjustments	1
3.1	Reciprocal levelling, Fly levelling, Check levelling	2
3.1	Longitudinal and Cross sectioning levelling	1
3.1	Uses and Characteristics and methods of Contour	1
3.1	Methods of contouring	1
3.1	Calculation of areas and volumes by mid-ordinate, average ordinate, trapezoidal and Simpson's methods	2
4	Tacheometric Survey	
4.1	Theodolite parts, adjustments and constants	1
4.2	Consecutive coordinates, independent coordinates	
4.3	Omitted Measurements	2
4.4	System of Tacheometry – stadia and tangential	1
4.5	Measurement of horizontal, vertical angle and distance by stadia principle.	
4.6	Measurement of horizontal, vertical angle and distance by tangential principle.	1
4.7	Trigonometrical levelling -Single plane	1
4.8	Trigonometrical levelling -double plane	1
5	Curves	
5.1	Types of circular curves	1
5.2	Relationship between radius and degree of curve and elements of simple circular curves	
5.3	Linear methods of setting out simple circular curve- offsets from long chord	1
5.4	Linear methods of setting out simple circular curve – Offsets from tangents	
5.5	Linear methods of setting out simple circular curve – Offsets from chords produced	1
5.6	Linear methods of setting out simple circular curve – Offsets from chords produced – successive bisection of arcs	
5.7	Angular methods of setting out simple circular curve- Rankine's method of deflection angles	1
5.8	compound and reverse curves	1
5.9	transition curve – to find the length of transition curve	1
	Triangulation:	
5.10	Types of triangulations, systems, figures, signals	1
5.11	Baseline measurement.	1
6	Modern Methods of Surveying	
6.1	Electronic Distance Measurements (EDM),	1
6.2	Applications of Global Positioning System (GPS)	1
6.3	Total Station and its applications	2
6.4	Digital Elevation Model (EDM)	1
Total Hours		36

22CE240	PROGRAMMING FOR PROBLEM SOLVING

Category	L	T	P	Credit
ESC	3	0	0	3

Preamble

This course provides students with the opportunity to gain a thorough understanding of how to solve problems in a precise manner and how to design computer solutions. The course emphasizes the use of problem-solving techniques, the design and development of algorithms, and the mastery of computer programming skills.

Prerequisite

- nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcomes (CO)	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Describe the program design and problem-solving aspects used to provide a solution for the given problem and construct flowcharts for modelling the solution.	TPS2	A	70
CO2	Illustrate algorithms for solving engineering problems and simple mathematical problems to examine the suitability of appropriate repetition and/or selection structures for given problems	TPS3	A	65
CO3	Practice program for array processing techniques related to matrix manipulation problems.	TPS3	A	65
CO4	Build programs for function, recursion and string manipulation concepts as applicable.	TPS3	A	65
CO5	Apply algorithms and programs for solving various searching and sorting problems.	TPS3	A	65
CO6	Construct solutions for the storage, retrieval and processing of data using structures and files.	TPS3	A	65

Mapping with Programme Outcomes

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO6	-	-	-	-	-	-	-	-	2	-	20	-	-	-	-	-	2	10	-	-	-	-

*Terminal examination should cover all Course Outcomes in the appropriate TPS Scale level.

Syllabus

Introduction to Computer Problem Solving – Problem solving aspect –Top-down Design – Implementation of Algorithm – Flowcharts. **Fundamentals of Algorithms** - Exchanging values of variables, counting. **Fundamentals of Programming and Factoring Methods** - Data types, Input and Output Statements, Operators and Expressions, Control structures - Selection Control Structures - Repetition Control Structures - Summation of set of number - Reversing the digits of an Integer, Factoring Methods - Finding square root of a number -The smallest divisor of an integer, Generating Prime numbers. **Array Techniques**—Use of 1D and 2D arrays, Finding the maximum number in a set - Finding Kth smallest number, Partitioning an array. Matrix manipulations – Addition, Multiplication. **Functions and Recursion** - Function Declaration, definition and execution, Factorial computation, Fibonacci sequence generation, String Manipulations – comparison between strings, copying of strings, searching for substring. **Sorting and Searching Algorithms** – Bubble sort, Selection sort, Linear Search, Binary search. **Structures and Files**—Structures – Storing and accessing elements, Array of Structures – Files – Read and Write operations on text files.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures
1	Introduction to Computer Problem Solving (6)	
1.1	Problem Solving aspect, Top-Down Design	2
1.2	Implementation of an Algorithm, Flow charts	2
1.3	Fundamentals of Algorithms - Exchanging the values of two variables, Counting	2
2	Fundamentals of Programming and Factoring Methods (10)	
2.1	Data types, Input and Output Statements	2
2.2	Operators and Expressions	2
2.3	Control Structures - Selection Control Structures, Repetition Control Structures	2
2.4	Summation of a set of numbers, Reversing the digits of an Integer.	1
2.5	Factoring Methods - Finding square root of a number - The smallest divisor of an integer	2
2.6	Generating Prime numbers	1
3	Array Techniques (5)	
3.1	Use of 1D and 2D arrays	2
3.2	Finding maximum and the minimum value in a set	1
3.3	Finding K th smallest number, Partitioning an array	1
3.4	Matrix manipulations – Addition and Multiplication	1
4	Functions and recursion (6)	
4.1	Function Declaration, definition and execution	2
4.2	Factorial Computation	1
4.3	Fibonacci sequence generation	1
4.4	String manipulations – Comparison between strings, Copying of strings, Searching for substring	2
5	Sorting and Searching Algorithms (4)	
5.1	Bubble Sort, Selection sort	2
5.2	Linear Search, Binary Search	2
6	Structures and Files (5)	
6.1	Structures- storing and accessing elements	2
6.2	Array of structures	1
6.3	Files – Read and Write operations on text files	2
	Total	36

22CE250	BUILDING MATERIALS AND TECHNOLOGY

Category	L	T	P	Credit
PCC	2	0	2	3

Preamble

This theory cum practical course is designed to give an exposure on the theoretical concepts of various materials and techniques in construction. It also gives an overview on planning aspects of residential building components with ventilation as per NBC provisions. This course also aims to apply the theoretical knowledge to practical problems.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to:

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Apply NBC provisions and plan components of residential buildings for the given plot sizes as per NBC along with ventilation aspects	TPS3	A	70
CO2	Explain the properties and uses of various natural building materials, conduct tests on materials such as stone, aggregates, lime, timber for an given applications	TPS3	A	65
CO3	Explain the properties and uses of various man made building materials, conduct tests on materials such as bricks, steel, cement and select suitable material for an given applications	TPS3	A	65
CO4	Explain the components of building in sub-structure and superstructure. Also identify, describe and demonstrate the techniques used for their construction	TPS3	A	65
CO5	Identify and describe the salient features and uses of various flat and pitched roofs, weathering course, Floor, flooring pointing, plastering, painting including scaffolding, shoring and underpinning	TPS3	A	65
CO6	Select appropriate tools and equipment for testing of materials such as: bricks, cement and steel rods and construction	TPS3	A	70

CO6	-	-	-	2	4	10		-	5	-	
Total	10	30	60	10	20	70		10	30	60	

Course Level Assessment Questions**Course Outcome 1 (CO1)**

1. Plan suitably a residential building of 300sq.m with kitchen, bedroom, living room and bath & water closet to derive max benefit from natural agencies.
2. A hall in a residential building is having dimension of 6m x 5m. Provide suitable opening to cater to the ventilation requirements for the room as per code provisions.

Course Outcome 2 (CO2)

1. As a civil engineer what parameters you will consider for recommending stone as a building material
2. As a civil engineer identify the criteria for a timber as a good natural building material.

Course Outcome 3 (CO3)

1. As a civil engineer what parameters you will consider for recommending brick as a building material
2. Assume you are a site engineer identify measures for protecting cement

Course Outcome 4 (CO4)

1. Draw the cross section through a wall in a building. Identify the various components at different level, mentioning its functions
2. Identify a suitable type of bond in brick masonry for the following cases mentioning its features:
 - i) Partition wall
 - ii) Load bearing wall for 3 storey building
3. Identify a suitable type of stone masonry for the following cases mentioning its features:
 - i) Basement wall
 - ii) Superstructure wall

Course Outcome 5 (CO5)

1. Identify a suitable type of floor for the following cases mentioning its features:
 - i) Flooring in Industrial workshop
 - ii) IT building

- Vertical expansion is required in a multi-storey building. Identify suitable supporting system required for construction activities without affecting the free space surrounding the building
- A wide opening is to be made in a solid load bearing wall. Identify a suitable technology for executing it, without affecting the safety of the structure.

Course Outcome 6 (CO6)

- Identify suitable equipment to be used for the following situations:
 - Concreting with minimum voids
 - to maintain verticality in masonry
- Match suitable equipment with the given applications:

Name of tool/equipment	Application
Spirit level	Mass Concreting
Bulldozer	Proportioning of ingredients in concreting
Needle vibrator	Maintaining horizontality in walls
Mason's square	Maintaining verticality in walls
Batching plant	Compacting concrete in beams
	Compacting concrete in slabs
	Levelling of ground
	Earthwork excavation
	To maintain perpendicularity between walls at corner

Syllabus

Orientation of Buildings: Classification of buildings as per NBC. Site selection and its influencing factors, National Building Code provisions for components of residential buildings: Open spaces, Living room, Bed room, Kitchen, Bathroom and Water closet, National Building Code provisions for ventilation aspects in buildings. NBC provisions for fire safety in buildings.

Materials for Construction: Natural materials - stones, aggregates, timber, lime. Man-made materials: bricks, cement, steel, concrete, plastics, fly ash, GGBS, Silica fume, PCC and RCC, Composite materials – types and applications. **Technologies of Construction:** Masonry-Stone and Brick, Damp Proof Course, Lintels and Arches, Flooring, Roofing, Stairs, Scaffolding, Pointing, Plastering, Painting, Special Construction Techniques: Shoring, Underpinning.

Construction Tools and Machinery: Tools: plumb bob, spirit level, level tube, rammer, spade, shovels, straightedge, mortar pans, sieves, trolley, vibrators, bulldozers, draglines, cableways, belt conveyors. **Machinery:** batching plants, transit mixer and vibratory trucks for ready mixed concrete, pumps, air compressors, hoists and cranes, Choice of construction equipments for different types of works.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1.0	Orientation		
1.1	Orientation and Classification of Buildings as per NBC	2	CO1
1.2	Site selection and its influencing factor	1	
1.3	National Building Codal provisions for components of residential buildings: Open spaces, Living room, Bedroom, Kitchen, Bathroom and Water closet	2	
1.4	Building Ventilation aspects	1	
2.0	Materials for Construction		
2.1	Natural materials - Stones, timber, lime, aggregates– Properties and uses	2	CO2, CO3
2.2	Man made materials- Bricks, cement, concrete, steel, plastics, fly ash, GGBS, silica fume, PCC and RCC, Composite materials -types and applications	2	
3.0	Components of building & Technologies for Construction		
3.1	a) Components of Building	1	CO4
	b) Stone Masonry	1	
3.2	Brick Masonry	2	
3.3	Dampproof course	1	
3.4	Lintel and Arches	1	
3.5	Flooring	1	CO4,CO5
3.6	Roofing	1	
3.7	Stairs	2	
3.8	Scaffolding	1	CO5
3.9	Pointing, Plastering and Painting	1	
3.10	Shoring and Underpinning	1	

4.0	Construction Tools and Machinery		
4.1	Tools: plumb bob, spirit level, level tube, rammer, spade, shovels, straight edge, mortar pans, sieves, trolley	1	CO6
4.2	Machinery: batching plants, transit mixers and vibratory Trucks for ready mixed concrete, hoists and cranes		
Total No. of Lecture Hours		24	

List of Experiments for Practical Hours

S. No	Description	No. of Hours	Course Outcome
1.	Apply NBC provisions and plan components of residential buildings for the given plot size	4	CO1
2.	Demonstrate the Appropriate tools and equipments used for testing materials such as Bricks, steel and cement	2	CO2, CO6
3.	Tests on bricks (Field test, Compression and water absorption test)	2	CO3
4.	Demonstrate different types bonds in brick masonry work– Stretcher bond, header bond and English bond	2	CO3
5.	Demonstratedifferenttypesbonds inbrickmasonrywork– Flemishbondandzigzagbond	2	CO3
6.	Test on steel (Diameter and tensile strength)	2	CO3
7.	Test on cement (Field test, Consistency and initial setting time)	2	CO3
8.	Identify and classify the different types of stone masonry in the campus	2	CO4
9.	a) Identify and classify the different types of staircases in the campus	1	CO4
	b) Determine the geometrical parameters of dog legged stair	1	
10	Identify and classify the different types of roofs provided in the campus discussing its features	2	CO5
11	Identify and classify the different types of floors and finishes provided in the campus discussing its features	2	CO5

22CE270	WORKSHOP

Category	L	T	P	C
ESC	-	-	2	1

Preamble

The workshop is a hands-on training practice for Mechanical engineering students. It deals with fitting, carpentry, sheet metal, welding, and plumbing-related exercises. The course is designed to train the students to identify and manage the tools, materials, and methods required to execute an engineering project. Students will be introduced to a team working environment where they develop the necessary skills for planning, preparing, and executing an engineering project. To enable the student to familiarize various tools, measuring devices, practices, and different methods of manufacturing processes employed in industry for fabricating components. This course is a response to the growing demand for a broad knowledge base for those who undertake a specialized career in science, especially those who take up a research career.

Prerequisite

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Assemble the pipes and joints for the given plumbing pipeline circuit	TPS3	A+	90
CO2	Prepare different types of joints using fitting operations for the given metal plates	TPS3	A+	90
CO3	Fabricate sheet metal components.	TPS3	A+	90
CO4	Fabricate different types of wooden joints.	TPS3	A+	90
CO5	Perform Lap joint / Butt Joint using an arc welding process	TPS3	A+	90

Mapping with Programme Outcomes

CO1	10	2	25	100
CO2	10	2		
CO3	15	2		
CO4	20	2		
CO5	10	2		

- Students will be evaluated in any two trades. Each trade of 1 hour and 30 mins duration

List of Experiments

No.	Experiment	CO
1.	Plumbing Exercise: Assemble of plumbing pipeline circuit for domestic application (Any one Plumbing Exercise) – 4 hours	CO1
2.	Fitting Exercises: Preparation of Square/V/L/Gauge/Taper Fitting (Any one Fitting Exercises) – 4 hours	CO2
3.	Sheet Metal Exercises: Preparation of Dustpan/Tray/ Liter Cone - (Any one sheet metal Exercise) – 6 hours	CO3
4.	Carpentry Exercises: Preparation of wooden parts like Photo frame/Office tray (Any one Carpentry Exercise) – 6 hours	CO4
5.	Arc welding Exercises: Preparation of lap/butt joint using arc welding process (Any one Welding Exercise) – 4 hours	CO5

22CE310	FOURIER SERIES AND PARTIAL DIFFERENTIAL EQUATIONS	Category	L	T	P	C	Terminal Exam Type
		BSC	3	1	-	4	Theory

Preamble

This course introduces the basics of partial differential equations and the techniques to solve such equations which are widely used in modelling and analysis of a wide range of physical phenomena across all branches of engineering. It also develops students' skill in formulation, solving, understanding and interpretation solutions of PDE models. At the end of the course, former ideas are combined to solve boundary value problems for a particular partial differential equation such as wave propagation and heat phenomena.

Prerequisite

22MA110 - Calculus for Engineers

Course Outcomes

On the successful completion of the course, students will be able to

CO	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Compute Fourier series of functions in engineering applications.	TPS3	75	70
CO2	Formulate the partial differential equations to various physical phenomena	TPS2	80	75
CO3	Solve the partial differential equations using appropriate methods.	TPS3	75	70
CO4	Employ the techniques of Fourier series to boundary value problems such as vibration of string and one-dimensional heat flow.	TPS3	75	70
CO5	Adopt Fourier series techniques to solve problems such as two-dimensional heat flow in cartesian and polar coordinates	TPS3	75	70
CO6	Apply the techniques for numerical solution of second order partial differential equations of different categories.	TPS3	75	70

22CE320	MECHANICS OF SOLIDS

Category	L	T	P	Credit
PCC	2	1	0	3

Preamble

This course offers the basic modules of mechanics of solids such as articulated structures, suspension cables and suspension bridges. This course aims at determination of axial and bending stresses, design of circular shafts, slope and deflection of beams, effect of moving loads and construction of influence lines.

Prerequisite

Fundamentals of Engineering Mathematics and physics.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Compute axial and bending stress.	TPS3	B	65
CO2	Select sections for circular shafts.	TPS3	B	65
CO3	Determine slope and deflection of determinate beams.	TPS3	B	65
CO4	Calculate forces in a member of truss.	TPS3	B	65
CO5	Demonstrate the effect of moving loads and to construct influence line diagram for determinate beams.	TPS3	B	65
CO6	Analyse suspension cables, three hinged stiffening girders and three hinged arches.	TPS3	B	65

*** Weightage depends on Bloom's Level, number of contact hours,

22CE330	FLUID MECHANICS

Category	L	T	P	Credit
PCC	3	0	0	3

Preamble

Fluid Mechanics is a subject of engineering science deals with the behaviour of fluids at rest as well as in motion. It is an important subject with unlimited practical applications ranging from biological systems to automobiles, airplanes and spacecraft propulsion. Thus this subject is given considerable importance in Civil, Mechanical and Chemical Engineering at core as well as at professional levels

Prerequisite

Basic Concepts of Physics and Mathematics

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Apply the knowledge of fluid properties in real fluid flow problems.	TPS3	A	70
CO2	Use the knowledge of Pascal's law and Hydrostatic law to find the pressure of the static and flowing fluid.	TPS3	A	70
CO3	Find the velocity and acceleration of fluids in pipes.	TPS3	A	70
CO4	Apply Bernoulli's theorem to solve a variety of fluid flow problems.	TPS3	A	70
CO5	Differentiate the laminar and turbulent flow in pipes. Also to calculate the losses in pipes.	TPS3	A	70
CO6	Apply the concept of boundary layer and its growth in real fluid flow problems.	TPS3	A	70

22CE340	WATER SUPPLY ENGINEERING

Category	L	T	P	Credit
PCC	3	0	0	3

Preamble

This course work aims at imparting the knowledge on various stages of works involved in planning, designing and execution of protected water supply system to a town/city. Starting from demand estimation, identification of sources, studying the quality aspects of water at these sources, evolving a suitable treatment method to bring the quality to the permissible standards and finally, distribution of this treated water to the individual dwelling units are well addressed.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency scale	Expected Proficiency	Expected Attainment Level %
CO1	Estimate the total water demand for a town/city and to Identify suitable sources to meet the demand.	TPS3	A	65
CO2	Fix the physical, chemical, and biological characteristics of different sources of water	TPS3	A	65
CO3	Design an appropriate treatment system for the water available at different surface sources	TPS3	A	65
CO4	Design an appropriate treatment system for the water available at different sub-surface sources	TPS3	A	65
CO5	Design the conduits for the transportation of water from the source to the treatment plant and to the city	TPS3	A	65
CO6	Plan and design a water distribution system for a building/city.	TPS3	A	65

Syllabus

Demand Estimation - Importance and need for planned water supply, water demand – Types, per capita demand, factors affecting per capita demand, variation in demand, Design periods and population forecasting, different methods. **Identification of sources**, - Sources of water, Surface sources-ponds-lakes-streams- rivers, Groundwater sources, occurrence, aquifers and their types, Wells - open wells, Tube wells, springs and their types, Infiltration galleries, Infiltration wells,. Intakes and their types **Quality Assessment** - Quality of water, Physical quality, chemical quality, Biological quality, waterborne diseases, Water quality standards. **Treatment of water** – Screening - Sedimentation – theory, types of settling, Stokes law - Coagulation – theory, chemicals - Jar test, design of sedimentation tank, Filtration – removal mechanisms, filter media, types, slow sand, rapid sand and pressure filters, filter design. Disinfection, Chlorination – action, factors influencing, free chlorination, combined chlorination, ozonation, UV radiation, Treatment of subsurface water-water softening, Desalination, Reverse Osmosis, Iron, manganese and arsenic removal-Advanced water treatment techniques-water treatment practices in rural areas. **Transport of water**, hydraulic design of pressure pipe, Pipe materials, pipe joints, pipe appurtenances, testing of pipe line, Pumps for lifting water and its types. **Water Distribution** - Distribution systems – requirements, layouts and methods, Distribution reservoirs, storage capacity, mass curve method, Leak detection - Analysis of distribution network, Hardy Cross method, Water supply system in buildings, house connection, pipe fittings, piping systems, recycled water, Two pipe system, usage of software

Course Contents and Lecture Schedule

Module No.	Topic	No. of Periods	CO
1	Demand Estimation		
1.1	Importance and need for planned water supplies.	1	CO1
1.2	Water demand - Types,	1	CO1
1.3	Per capita demand, factors affecting per capita demand. Variation in demand, Design periods.	1	CO1
1.4	Population forecasting - Different methods	2	CO1
1.5	Sources of water: Surface sources: ponds, lakes, streams, rivers	1	CO1
1.6	Ground water sources	1	CO1
1.7	Intakes and their types	1	CO1
2	Quality Assessment		
2.1	Quality of water - Physical quality, chemical quality	1	CO2
2.2	Biological quality	1	CO2
2.3	Water borne diseases, Water quality standards		CO2
3	Treatment systems for surface water sources		
3.1	Objectives of treatment of water - Screening	1	CO3
3.2	Sedimentation - theory, types of settling, Stokes law	1	CO3
3.3	Coagulation - theory, chemicals used, flocculation, Jar test.	1	CO3
3.4	Design of sedimentation tank	1	CO3
3.5	Filtration - Filter media - removal mechanisms, Slow sand filter	1	CO3
3.6	Rapid sand and pressure filters	2	CO3
3.7	Filter design	2	CO3
4	Treatment systems for sub-surface water sources		
4.1	Disinfection - methods, Ozonation and UV radiation	1	CO4
4.2	Chlorination - action, factors influencing	1	CO4
4.3	Water softening- Desalination	1	CO4
4.4	Reverse Osmosis -iron, manganese and arsenic removal treatment of water	1	CO4
4.5	Water treatment practices in rural areas.	1	CO4
5	Transport of water		
5.1	Hydraulic design of pressure pipe	2	CO5
5.2	Pipe materials, pipe joint, Pipe appurtenances, testing of pipe line.	1	CO5
5.3	Pumps for lifting water - types.	1	CO5
6	Water Distribution		
6.1	Distribution systems - requirements, layouts, methods.	1	CO6
6.2	Distribution reservoirs - storage capacity, mass curve method- Tutorials	2	CO6
6.3	Leak detection	1	CO6
6.4	Analysis of distribution network - Hardy Cross method - Tutorials	2	CO6
6.5	Water supply system in buildings - house connection, pipe fittings, storage tanks, piping systems.	1	CO6
6.6	Two pipe system, recycled water, usage of software	1	CO6

22CE370	C PROGRAMMING LABORATORY

Category	L	T	P	Credit
ESC	0	0	2	1

Preamble

The laboratory course is designed to facilitate the students to solve simple mathematical, numerical and engineering problems using C programming language. The list of experiments starts with implementation of fundamental concepts, various control structures, array handling methods, string manipulations, use of functions, structures and files in C programming language. Then, the concepts learnt are applied by taking case studies in the appropriate engineering domain. These experiments will build up the concepts learnt in the corresponding theory course.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Demonstrate the working of fundamental algorithms using data types, constants and expressions in C language	TPS3	B+	80
CO2	Illustrate different control structures in C for solving the simple mathematical and engineering problems	TPS3	B+	80
CO3	Make use of array processing techniques to perform matrix manipulations.	TPS3	B+	80
CO4	Solve problems related to string manipulations, sorting and searching using functions or recursion as applicable	TPS3	B+	80
CO5	Write programs in C using files and structures to store, retrieve and process data	TPS3	B+	80
CO6	Experiment the case studies in civil engineering domain and solve using C programs	TPS3	B+	80

List of Experiments/Activities with CO Mapping

Experiments	No of Hours	CO
Implement C programs using fundamental algorithms - Calculating simple Interest - converting the temperature from Celsius to Fahrenheit - Area and perimeter of rectangle	1	CO1
Implement C programs using selection and repetition control structures - Simple Arithmetic Calculator - Grade Computation - Biggest of three numbers - Sum of set of numbers	2	CO2
Implement C programs for array handling - Maximum/ Minimum element in an array - Read n number of values in an array and display it in reverse order - Copy elements of one array to another array	1	CO3
Implement C programs for matrix manipulations Matrix Addition, Subtraction and Multiplication	1	CO3
Implement C programs using functions - Swap of two numbers using call by value and call by reference - Find GCD using function	1	CO4
Develop C programs using recursion - Fibonacci Series - Factorial Computation	1	CO4
Develop C programs for string manipulations Implement string operations such as string concatenation, copy, length	1	CO4
Implement C programs to implement different sorting and sorting methods - Linear Search - Bubble sort	1	CO4
Develop C programs using structures and files - Storage, Retrieval and Processing of student data - Read and Write operations on text files	1	CO5
Implementation of any two case studies related to civil engineering using C programs	2	CO6
Total Hours	12

22CE380	DIGITAL SURVEY LABORATORY

Category	L	T	P	Credit
PCC	0	0	2	1

Preamble

Knowledge of basic survey methods is essential in order to determine the distance and heights of the objects using stadia, tangential as well as trigonometrical principle by using theodolite and Total station

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to:

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Use the surveying equipments like Theodolite and Total Station in measuring horizontal and vertical angles.	TPS3	A	80
CO2	Locate the position of the object using stadia and tangential method of survey.	TPS3	A	80
CO3	Locate the position of the object using trigonometrical principle.	TPS3	A	80
CO4	Measure the distance and elevation of a remote object using Total Station.	TPS3	A	80

Mapping with Programme Outcomes

22CE410	PROBABILITY STATISTICS AND NUMERICAL METHODS

Category	L	T	P	C	Terminal Exam Type
BSC	3	1	-	4	Theory

Preamble

Statistics and Probability are the main tools for an engineer for the processing, comparison, analysis interpretation of data. In this context the concepts on Statistics and Probability are added. Recently the idea of numerical solutions has a reasonable impact on needed topics various branches of engineering. In this regard the ideas on Numerical solution to algebraic and system of equations and ODEs are added. Finally, to signify the process of Numerical differentiation and integration the rudiments of difference calculus are included.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Compute the measures of central tendency and interpret their significance in the relevant area of study	TPS2	80	75
CO2	Compute the measures of correlation and regression and apply them in the needy context	TPS3	75	70
CO3	Apply the concept of probability through standard distributions and apply them in suitable situations of study	TPS3	75	70
CO4	Understand the numerical solution of algebraic and transcendental equations	TPS2	80	75
CO5	Solve the system of linear algebraic equations using appropriate methods	TPS3	75	70
CO6	Apply the process of Numerical Differentiation and Integration through the idea of difference calculus and the process of interpolation.	TPS3	75	70

Course Contents and Lecture Schedule

No.	Topic	No. of Periods
1.	Descriptive Statistics	
1.1	Mean, median, mode	2
1.2	Geometric mean, Harmonic mean	1
	Tutorial	1
1.3	Range, Quartile deviation, Mean deviation and standard deviation Coefficient of variation	2
1.4	Correlation - coefficient of correlation	1

	Tutorial	1
1.5	Lines of Regression	1
1.6	Rank correlation	1
	Tutorial	1
1.7	Principle of least squares- Method of Least squares	1
1.8	Fitting of other curves	1
	Tutorial	1
2.	Probability Distributions	
2.1	Random experiment-Conditional probability -Baye's Theorem	2
2.2	Random variables - Discrete Probability distributions	1
	Tutorial	1
2.3	Continuous Probability distributions	1
2.5	Expectation	1
2.6	Binomial, Poisson and Normal Distribution.	3
	Tutorial	1
3.	Numerical Solution of Equations	
3.1	Bisection method - Regula Falsi method	2
3.2	Newton-Raphson method	1
3.3.	Gauss Elimination and Gauss Jordan methods	2
	Tutorial	1
3.4	Factorization Method	1
3.5	Jacobi Iteration method - Gauss-Seidal iteration method	2
	Tutorial	1
4	Numerical Differentiation and Integration	
4.1	Difference operators-Relation between operators.	1
4.2	Interpolation with equal intervals: Newton forward and backward interpolation formulae	2
4.3	Central Differences - Gauss forward and backward interpolation formulae	2
	Tutorial	1
4.4	Interpolation with unequal intervals: Lagrange's interpolation formula	1
4.5	Numerical Differentiation: Formula for derivatives: Forward and backward difference formula, central difference formula	2
4.6	Tutorial	1
4.7	Numerical integration: Trapezoidal Rule-	1
4.8	Simpson's one-third and three-eight rules	2
	Tutorial	1

22CE420	STRUCTURAL ANALYSIS

Category	L	T	P	Credit
PCC	2	1	0	3

Preamble

This course offers the various methods of analysis for indeterminate beams and portal frames. It aims at determination of end moments and constructing shear force and bending moment diagrams for the beams and frames. Also, ILD for indeterminate beams will be dealt with.

Prerequisite

Fundamentals of Engineering Mechanics and Mechanics of Solids.

Course Outcomes

On the successful completion of the course students will be able to

CO	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Construct ILD for indeterminate beams.	TPS3	B+	65
CO2	Analyse propped cantilever, fixed beam and frames by strain energy method.	TPS3	B+	65
CO3	Analyse propped cantilever, fixed beams and continuous beams using theorem of three moments.	TPS3	B+	65
CO4	Analyse beams and frames by slope deflection method.	TPS3	B+	65
CO5	Analyse beams and frames by moment distribution method.	TPS3	B+	65
CO6	Analyse beams and frames by matrix flexibility and stiffness method.	TPS3	B+	65

22CE430	HYDRAULICS AND HYDRAULIC MACHINERY

Category	L	T	P	Credit
PCC	3	0	0	3

Preamble

This course aims at an experimental way of studying the fluid flow, which deals with measurement, design and behavior of flow in open channels. Further, it also involves Dimensional analysis, model testing and design of hydraulic machines at an optimum cost.

Prerequisite

Basic Concepts of Physics and Mathematics

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Design various types of open channel and most efficient channel sections	TPS3	A	70
CO2	Calculate the depth of the hydraulic jump	TPS3	A	70
CO3	Apply the principles of Dimensional and Model Analysis in hydraulic engineering problems.	TPS3	A	70
CO4	Compute the forces exerted by the jet of water on plates.	TPS3	A	70
CO5	Design and study the performance of various types of hydraulic turbines.	TPS3	A	70
CO6	Design and study the performance of various types of pumps.	TPS3	A	70

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1	Open Channel Flow		
1.1	Introduction to open channel flow, Types of flow in channels	1	CO1
1.2	Chezy's equation, Empirical equation for the value of Chezy's constant	1	
1.3	Problems on rectangular and trapezoidal and circular channel section	2	
1.4	Most economical channel section, Condition for the most economical rectangular channel section.	1	
1.5	Condition for the most economical trapezoidal channel section.	2	
1.6	Condition for the most economical circular channel section.	1	
2	Non-Uniform flow		
2.1	Definition of Froude's number and Reynold's number , Definition of specific energy, specific energy diagram, critical depth, and critical velocity	1	CO2
2.2	Expression for depth of hydraulic jump & Expression for loss of energy due to hydraulic jump, Problems on hydraulic jumps	2	
2.3	Flow measurement in channels by notches and weirs	2	
3	Dimensional Analysis and Model Analysis		
3.1	Introduction to dimensional analysis, fundamental dimensions, derived quantity, dimensional homogeneity and problems.	1	CO3
3.2	Rayleigh's method and problems	1	

Module No.	Topic	No. of Hours	Course Outcome
3.3	Buckingham's Pi theorem and problems	2	
3.4	Similitude and model testing	1	
3.5	Dimensionless numbers and its application	1	
4	Impact of Jets		
4.1	Force exerted by the jet of water on stationery and moving vanes	1	CO4
4.2	Problems on symmetrical stationary and moving curved vanes	1	
	Problems on unsymmetrical moving curved vanes	1	
5	Hydraulic Turbines		
5.1	Introduction to water turbine and its classification, Pelton wheel & problems	2	CO5
5.2	Francis turbine working principle and problems	2	
5.3	Kaplan turbine working principle and problems	2	
5.4	Specific speed and cavitation in turbines	1	
6	Pumps		
6.1	Introduction to centrifugal pump & Description of working principles	1	CO6
6.2	Troubles and remedies in centrifugal pumps	1	
6.3	Performance characteristics, specific speed of centrifugal pumps, and selection of centrifugal pumps	2	
6.4	Introduction to reciprocating pump, single acting and double acting pump and slip	1	
6.5	Indicator diagrams	1	
6.6	Air vessels and acceleration head and power required	1	
	Total Hours	36	

Course Designer(s):

22CE440	WASTEWATER ENGINEERING

Category	L	T	P	Credit
PCC	3	0	0	3

Preamble

This course work aims at imparting the basic knowledge on various stages of works involved in planning, designing and execution of underground drainage system for a town/ city. This involves characteristics study on wastewater, estimation of wastewater and storm drainage generation, collection of wastewater, evolving a suitable treatment system to bring down the pollution level to acceptable limit and disposal of the treated wastewater on to land/ water bodies without endangering the environment.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected attainment level in %
CO1	Estimate the quantity of wastewater and storm run-off generated and design a suitable collection system for the rural/urban	TPS3	A	65
CO2	Identify the sewer appurtenances needed for the smooth functioning of the sewerage and to perform required maintenance operations for the system	TPS3	A	65
CO3	Characterize the wastewater generated from a town/ city and design necessary primary treatment units	TPS2	A	65
CO4	Design the necessary secondary treatment systems for the wastewater generated after its primary treatment.	TPS3	A	65
CO5	Identify the suitable mode of disposal for the treated wastewater without endangering the environment.	TPS3	A	65
CO6	Plan and design a house drainage system and to design a septic tank for isolated buildings.	TPS3	A	65

Syllabus

Collection of Sewage - Systems of sanitation, Sewerage - separate, combined and partially separate system. Estimating the quantity of sewage, dry weather flow,- hydraulic design of sewers, usage of software estimating storm run-off by the rational formula. **Transportation of Wastewater**, usage of software, Sewer materials, laying and testing of sewer, sewer appurtenances, cleaning and ventilation of sewers, pumping of sewage. **Characteristics of sewage** - decomposition – aerobic and anaerobic decomposition, physical and chemical quality of sewage, BOD and their testing, BOD equation, and problems, a population equivalent. Primary treatment of Wastewater- **Secondary treatment of sewage**, aerobic treatment, activated sludge process and its mechanism, design parameters and design, modifications in ASP, Trickling filters, process mechanism, types, design parameters and design, Hybrid system -MBBR (basics only), Natural systems, Ponds and Lagoons. Introduction to SBR and MBR. Anaerobic systems Fundamentals- UASB, anaerobic filters- Sludge characteristics, digestion tanks, design, disposal of digested sludge; Nutrient removal, tertiary treatment. **Impact of disposal of sewage** disposal by dilution, self-purification, oxygen sag curve, Streeter Phelps equation, Impact on lakes, Eutrophication, Impact on sea, Land irrigation, sewage farming, sewage sickness, Recycling of treated sewage. Drainage system-plumbing system-types- Disposal of sewage in isolated buildings, Septic tank, Leach pit.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Periods	CO
1	Collection of sewage		
1.1	Generation of sewage	1	CO1
1.2	Quantification of sewage- estimation	1	CO1
1.3	Estimation of storm runoff	1	CO1
1.4	System of sanitation		CO1
1.5	Estimation of storm runoff	2	CO1
2	Transportation of wastewater		
2.1	Hydraulic design of sewers	2	CO1
2.2	Sewer appurtenances	1	CO2
2.3	Maintenance of sewer	1	CO2
2.4	Pumping of sewage		CO2
2.5	Sewer material, laying and testing of sewer	1	CO2
3	Characterization of sewage		
3.1	Aerobic and anaerobic decomposition of sewage	1	CO3
3.2	Physical quality of sewage		CO3
3.3	Chemical quality of sewage	1	CO3
3.4	BOD, testing procedure and BOD equation	1	CO3
3.5	Problems in BOD and population equivalent		CO3

Module No.	Topic	No. of Periods	CO
3.6	Biological quality of sewage	1	CO3
3.7	Objectives of treatment - Physico - chemical treatment	1	CO3
4	Secondary Treatment of wastewater		
4.1	Aerobic treatment - activated sludge process- process mechanism	1	CO4
4.1.1	Methods of aeration	1	CO4
4.4.2	Design consideration and design	1	CO4
4.1.3	Modification in ASP	1	CO4
4.2	Trickling filters- process mechanism, types	1	CO4
4.2.1	Design consideration - standard rate trickling filter	1	CO4
4.2.2	Design of standard rate trickling filter	1	CO4
4.2.3	High-rate trickling filter- design	1	CO4
4.3	Hybrid system- SBR, MBR, MBBR	1	CO4
4.4	Natural systems - ponds and lagoons	1	CO4
4.5	Nutrient removal-Tertiary treatment		
4.5.1	Anaerobic system-Fundamentals- UASB	1	CO4
4.6	Anaerobic filter, natural system		CO4
4.6.1	Sludge digestion- characteristics of sludge, digestion tanks	1	CO4
4.6.2	Design of digestion tank and disposal of digested sludge		CO4
4.6.2	Sludge digestion tanks and Sludge Characteristics	1	CO4
5	Impact of disposal of sewage		
5.1	Impact of disposal of treated sewage - Impact on river	1	CO5
5.1.1	Self-purification of streams	2	CO5
5.1.2	Oxygen sag curve for streams		CO5
5.1.3	Streeter Phelps equation- problems		CO5
5.2	Impact on lakes- eutrophication	1	CO5
5.3	Impact on sea		CO5
5.4	Land irrigation- sewage farming	1	CO5
5.4.1	Sewage sickness	1	CO5
5.5	Drainage system in isolated buildings- septic tanks	1	CO6
5.6	Plumbing system- types	1	CO6
	Total hours	36

22CE470	STRUCTURAL MECHANICS LABORATORY	Category	L	T	P	Credit
		PCC	0	0	2	1

Preamble

This laboratory course is intended to give hands-on training to compute deformations, deflections, and internal forces or stresses (stress equivalents) in various structural models.

Prerequisites

Mechanics of structures

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Analyze the behaviour of long columns with different end conditions.	TPS3	A+	75
CO2	Ascertain shear force, bending and deflection characteristics of simply supported and cantilever beam.	TPS3	A+	75
CO3	Determine various elastic constants for statically determinate beam	TPS3	A+	75
CO4	Determine the behaviour of portal frame and pin jointed truss.	TPS3	A+	75
CO5	Calculate the internal forces in cable and arch type structures.	TPS3	A+	75
CO6	Ascertain the deflection behaviour of curved members	TPS3	A+	75

Mapping with Programme Outcomes and Programme Specific Outcomes

S- Strong; M-Medium; L-Low

List of Experiments/Activities with CO Mapping

S. No	Description	No. of hours	Course Outcome
1	Behaviour of different types of columns and determination of Euler's buckling load for each case.	2	CO1

2	To determine the central deflection of a simply supported beam loaded by a concentrated load at mid-point and hence determine the modulus of elasticity of the material of the beam.	2	CO2
3	To verify the moment area theorem regarding the slopes and deflections of the beam	2	
4	Behaviour of cantilever beam under symmetrical and unsymmetrical bending.	2	
5	To find the value of flexural rigidity (EI) for a given beam and compare it with theoretical value.	2	CO3
6	Determination of Modulus of rigidity of the given material of circular shaft.	2	
7	To determine the deflection of a pin connected truss analytically & graphically and verify the same experimentally.	2	CO4
8	Behaviour of portal frame under different end conditions	2	
9	To find horizontal thrust for two hinged arches.	2	CO5
10	To find horizontal thrust for three hinged arches.	2	
11	Behaviour of suspension bridge under different loading.	2	
12	Determination of Elastic displacement of curved members.	2	CO6
Total Hours		24

22CE480	COMPUTER AIDED DRAFTING LAB	Category	L	T	P	Credit
		PCC	--	--	2	1

Preamble

This laboratory course work is intended to provide students with opportunities to acquire knowledge and to develop skills in drafting the different views of the components of the building structures using available drafting software and capable of viewing and drawing the plan, elevation and section of the different types of the building. The course shows how to use drafting software to set up drawings and construct lines, circles, arcs, other shapes, geometric constructions, and text. Students will use display and editing techniques as well to obtain information about their drawings and work with drawing files. This course also introduces recommended drafting standards for students to use for properly preparing drawings with drafting software.

Prerequisites

Nil

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Draw 2D drawing using basic drawing and editing commands	TPS3	A+	80
CO2	Manage the files, views, layers, and display commands	TPS3	A+	80
CO3	Create symbols using the concept of blocks, Wblocks & Xref	TPS3	A+	80
CO4	Publish and plot the drawing with annotations & Dimensioning,	TPS3	A+	80
CO5	Setting up of drawing in Layout Using the Concept of paper space & model space and specific scales.	TPS3	A+	80
CO6	Draw and edit 3D models using UCS	TPS3	A	65

22CE490	PROJECT MANAGEMENT	Category	L	T	P	Credit
		HSMC	2	1	0	3

Preamble

This course gives an exposure to the basic concepts involved in a project. Project management principles required to manage it with the need for network techniques and its applications to projects

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to:

COs	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain project, project management, life cycle and influencing factors, Knowledge areas of Project Management using PMBOK principles	TPS2	A	65
CO2	Analyze and Manage time in projects through Gantt charts and PERT techniques,	TPS 3	A	75
CO3	Analyze and Manage time in projects using CPM technique, update and monitor projects	TPS 3	A	75
CO4	Manage resources of project using resource smoothing and levelling techniques	TPS 3	A	65
CO5	Optimize resources of projects using scheduling, fast tracking and re-estimation techniques with CPM Cost Model.	TPS 3	A	65
CO6	Identify the need for awareness on emerging trends in project management. Brief introduction to Earned Value Management concept	TPS 2	A	65

Syllabus

Project and its process: Define project and process, Objectives and functions of Project management, organization structure / styles, roles of project management group, project integration, project life cycle- influencing factors. Knowledge management on Project Management from PMBOK- Case study. **Time Management:** Work break down structure. Project planning tools- Project Network- Fulkerson's rules – Activity-On-Arrow and Activity- On -Node networks. Analyze project time- using Gantt Chart, Program Evaluation & Review Technique – case study. Analysis of project with Critical path method - 80-20 rule (Pareto's rule)- Square network diagram. Precedence Diagramming Method- brief concept. Project updating and monitoring- Case study **Resource Management:** Types of resource in projects- Balancing of resource- Resource Smoothing technique- Resource leveling technique- - Case study. **Resource optimization:** Types of cost – Variation of Cost with time. Schedule Compression Techniques- Crash time and crash cost. Optimize project cost -CPM Cost model. **Emerging trends in project management:** Introduction to Theory of Constraints, Agile Project management, Earned Value Management - Case study

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	COs
1.0 Project and its process			
1.1	Define project and process, boundaries of project	2	
1.2	Objectives and functions of Project management, characteristics of projects		
1.3	Roles of project management group, project management office and its role		
1.4	Project knowledge area, project integration- process group		

	interaction		
1.5	Project flow, project life cycle- influencing factors, Case study		
1.6	Project Knowledge areas - Integration - project charter, Scope	2	CO1
1.7	Project Knowledge areas - Time, Cost, Quality- Triple Constraints, Procurement	1	
1.8	Project Knowledge areas - HR, Risk, Communication, Stakeholder Management	1	
	Case study		
2.0 Time Management			
2.1	Project Scope Management, Work break down structure - Activity/ Task- Events- Case study- Rolling wave planning	2	
2.2	Gantt Charts- concept and problems, Limitations of Gantt Chart, Milestone chart, Program Progress chart		
2.3	Project Network- Fulkerson's rules - A-O-A and A-O-N networks-Tutorial	2	CO2
2.4	Estimate time- PERT (Probabilistic Approach)- Event oriented network analysis- Optimistic, Pessimistic & Most likely time, Degree of variability in average time, Probabilistic estimate, % utilization of resources	2	
	Tutorial	1	
3.0 Project Time Management			
3.1	Analyze project time- Critical path method (deterministic approach- activity oriented network analysis- Square network diagram-Tutorial	2	
3.2	80-20 rule, type of time estimates - Case study		
3.3	Project updating and monitoring- Case study	2	
3.4	Tutorial	1	CO3
4.0 Resource Management			
4.1	Types of resource- Time, Men, Material, Machinery, Money, Space. Balancing of resource- need and purpose- Case study	2	
4.2	Resource Smoothing technique- Time constraint-Tutorial	2	CO4
4.3	Resource levelling technique- Resource constraint	2	
	Tutorial	2	
5.0 Resource optimization			
5.1	Types of cost - Direct, Indirect and Total Cost. Variation of Cost with time. Schedule Compression Techniques- Crashing, Fast Tracking & Re-estimation Crash time and crash cost- Tutorials	2	
5.2	Optimize project cost for time and resource- CPM Cost model- Case study. Precedence Diagramming Method- brief idea	3	CO5
	Tutorials	1	
6.0 Emerging Trends in Project Management			
6.1	Emerging trends in project management: (Brief concept only) Agile Project Management	1	
6.2	Theory of Constraints	1	CO6
6.3	Earned Value Management	2	
Total Periods		36

22CE510	SOIL MECHANICS

Category	L	T	P	Credit
PCC	3	0	0	3

Preamble

All structures are built on soils. To design safe and sound structures, engineers should have fundamental knowledge on the properties of soil, behavior of soil when it is subjected to loads from the built structures. This course deals with the application of laws of Mechanics and Hydraulics to solve engineering problems related with soils like flow of water through soil, Shear strength, Compressibility & Compaction characteristics of soil and Stress distribution in soil

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Identify various types of soil, classify them and compute their index properties.	TPS3	B+	65
CO2	Understand the flow of water through soil medium and calculate the permeability of cohesive and cohesionless soils.	TPS3	B+	65
CO3	Illustrate the significance of soil compaction	TPS3	B+	65
CO4	Calculate effective stress within soils and compute stresses in soil due to external loads.	TPS3	B+	65
CO5	Compute the shear strength of soils based on the parameters obtained from shear tests.	TPS3	B+	65
CO6	Interpret the concept of consolidation and estimate the settlement of soil due to consolidation.	TPS3	B+	65

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1.	Origin and Properties of soils		
1.1	Formation of soil - Commonly used soil designations	1	CO1
1.2	Phase relationships - Index properties	1	
1.3	Laboratory tests	1	
1.4	Particle size distribution analysis	2	
1.5	Determination of consistency limits and their significance to the field behaviour of soil	2	
1.6	BIS soil classification system	1	
2.	Permeability		
2.1	Darcy's law and its validity - Determination of permeability in laboratory	2	CO2
2.2	Factors affecting permeability - Seepage analysis - Laplace's equation	2	
2.3	Introduction to Flow Nets	1	
3.	Soil Compaction		
3.1	Concept of compaction - Standard proctor and Modified proctor compaction Tests	2	CO3
3.2	Factors affecting compaction	1	
3.3	Field compaction methods and machineries	2	
4.	Stress distribution in soil		
4.1	Concept of total and effective stress in saturated soils deposits - Quick sand condition - Liquefaction	2	CO4
4.2	Stresses due to external loads - Boussinesq's theory (Point load, UDL and Line Load)	2	
4.3	Concept of Pressure bulb - Approximate methods - Use of Newmark's influence chart - Westergaard's theory	2	
5.	Shear Strength		
5.1	Shear strength of cohesive and cohesionless soils - Mohr-Coulomb failure criterion - Classification of shear test based on drainage conditions	2	CO5
5.2	Direct shear test - Unconfined compression test	2	
5.3	Triaxial compression test - Vane shear test	2	
6.	Compressibility		
6.1	Concept of consolidation - Terzaghi's theory of one-dimensional consolidation	2	CO6
6.2	Components of settlement - Computation of rate of settlement	2	
6.3	Determination of C_v by $\sqrt{t}$ method and log time method - Calculation of consolidation settlement	2	
	Total Hours	36

22CE520	DESIGN OF STEEL ELEMENTS	Category	L	T	P	Credit
		PCC	3	0	0	3

Preamble

The primary concern of an engineer is design. Structural design consists of conceptualization, idealization, analysis, design, construction and maintenance. Conceptualization is required to arrive at the final shape and size of the structure. Idealization involves reducing the conceived structure into primary elements. By analysis, internal forces like bending moments, shear, torsion, compression and tension in each and every element is determined. Design assigns every element a particular material and size. Construction involves putting all the elements together to perform like the originally conceived structure. Maintenance is needed to keep the performance of the structure without deterioration.

In this course, the exposure to IS:800 code provisions, Plastic analysis and design of bolted and welded connections, tie members, compression members, beam and column bases made of steel are dealt with. Further, the elements are designed for internal forces like tension, compression, bending moment and shear.

Prerequisite

22CE320-Mechanics of Solids

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency (Grade)	Expected Attainment Level %
CO1	Demonstrate the force transferring mechanism and apply the principles in designing bearing type & HSFG type bolted connections	TPS3	B	65
CO2	Illustrate the force-transferring mechanism and apply the principle in designing the welded connections	TPS3	B	65
CO3	Apply the code provisions in estimating the capacity, and dimensioning the steel tension members.	TPS3	B	65
CO4	Compute the capacity and arrive at a compression member cross-section along with the suitable column base.	TPS3	B	70
CO5	Execute the plastic analysis of indeterminate beams and portal frames to predict collapse load factor / plastic Moment capacity.	TPS3	B	70
CO6	Apply the code provisions for the strength and stability assessment of flexure members with or without lateral support	TPS3	B	65

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1	Introduction of Structural steel		
1.1	Structural steel types - Mechanical Properties of structural steel- Indian structural steel products.	1	CO1
1.2	Design Philosophy of steel structures: Introduction - Working stress method - Limit state method	1	
1.3	Classification of cross sections- IS800:2007 related provisions.	1	
1.4	Bolted connection: Connection types & Introduction to riveted connections.	1	
1.5	Force transfer mechanism of bearing type & HSFG bolts-failure mechanism.	1	
1.6	Design of bolted connection - direct tension - compression.	1	
1.7	Design of bolted connection - moment in plane of the bolt	1	
1.8	Design of bolted connection - moment perpendicular to the bolt	2	
1.9	Design of Slip critical connections	2	
2	Welded connection		
2.1	Type of welds, joints - the strength of welds.	1	CO2
2.2	Design of welded connection - the moment in the plane of the weld	2	
2.3	Design of welded connection - moment perpendicular to the weld	2	
3.1	Tension members: Behaviour - Design of plate	1	CO3
3.2	Design of angle tension members.	1	
3.3	Design of built-up tension Members	1	
3.4	Connections in tension members - Use of lug angles - Design of tension splice.	2	
4	Compression members: Type of Column sections.	1	CO4
4.1	Design of rolled steel column	2	
4.2	Design of built up column - laced and battened columns.	2	
4.3	Design of Angle struts.	1	
4.4	Column base: Design of Slab base.	1	

4.5	Design of gusseted base.	1	
5	Plastic Analysis		CO5
5.1	Theory & assumptions yield criteria, plastic modulus.	1	
5.2	Shape factor - plastic analysis of continuous beams.	1	
5.3	Plastic collapse loads of Single Storey rectangular portal frame & various mechanisms.	2	
6	Flexure members: Behaviour - Design - simple and compound beams	1	CO6
6.1	Design of Laterally restrained beams -Shear Strength-Web Buckling, Crippling and Deflection of Beams.	1	
6.2	Design of Laterally unrestrained beams - Factors affecting lateral stability	1

22CE530	CONCRETE TECHNOLOGY

Category	L	T	P	Credit
ESC	4	0	0	4

Preamble

Concrete Technology focuses more on detailed understanding of concrete making materials and production process. Recent developments in concrete materials are also given adequate consideration. Going through the course, student would develop adequate understanding on concrete production process and properties and uses of concrete as a modern material of construction. The course will also enable the student to make appropriate decision regarding ingredient selection and use of concrete.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the properties and tests of various constituents present in concrete	TPS3	B	65
CO2	Demonstrate various manufacturing process of concrete and properties and workability tests of fresh concrete	TPS3	B	65
CO3	Design concrete mix as per IS and ACI standards	TPS3	B	65
CO4	Enumerate the mechanical behaviour and properties of hardened concrete	TPS3	B	65
CO5	Demonstrate the long-term properties of concrete and identify the solutions for field problems	TPS3	B	65
CO6	Select the suitable type of special concrete for real time situations	TPS3	B	65

Syllabus

Concrete making Materials: Cement: Raw materials; composition - Hydration, chemistry of cement; Types, Tests and specifications- Consistency, setting time, soundness and fineness test. **Aggregates:** Source- natural and artificial. Physical properties- gradation, fineness modulus, specific gravity, bulk density, bulking of sand, water absorption, moisture content, presence of deleterious content. Tests on coarse aggregates- impact, crushing, abrasion and attrition, alkali aggregate reaction. **Water:** Qualities of water for concreting- tolerable concentrations of impurities, sea water and its effects. **Concrete Production & Fresh properties:** Batching of ingredients; mixing, transporting, and placing - Compacting, finishing, and curing of concrete - Workability, bleeding and segregation of concrete - Factors influencing it - Tests on workability of concrete. **Admixtures:** Types of Admixtures- super plasticizers, plasticizers, retarders, accelerators, air entrained admixtures and pozzolanic admixtures **Concrete mix proportion:** Concept of Mix proportion - Quality acceptance criteria as per Indian standard method. Design of concrete mixes as per IS-10262, ACI method (procedure only). **Engineering properties of concrete:** Compressive strength and parameters affecting it - Tensile strength - direct and indirect; Modulus of elasticity and Poisson's ratio, flexural strength of concrete- Non-destructive test, partially destructive test. **Dimensional stability and Durability of concrete:** Creep - parameters affecting - Shrinkage of concrete - types and its significance; Introduction to durability; relation between durability and permeability - Chemical attacks on concrete- sulphate attack, chloride, acid attacks, sea water attacks, carbonation attacks - Corrosion of steel rebars, corrosion preventive measures. **Special concretes:** Properties and applications of: fibre reinforced concrete, high strength concrete, high performance concrete, reactive powder concrete, lightweight concrete and high-density concrete, self-compacting concrete, Polymer concrete, geo polymer concrete, Roller compacted concrete and Shotcrete.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1.0	Concrete making Materials		
1.1	Cement: raw materials and composition	1	CO1
1.2	Hydration chemistry of cement	2	
1.3	Types & grades of cement	1	
1.4	Tests and specifications - consistency, setting time, soundness test, fineness test, chemical analysis	2	
1.5	Aggregate sources - natural and artificial	1	
1.6	Fine aggregate- gradation, bulking of sand, presence of deleterious content, water absorption and moisture content- River sand & M-sand.	2	
1.7	Coarse aggregates - size and shape, gradation, specific gravity, bulk density sieve analysis, water absorption.	2	
1.8	Tests on coarse aggregates - impact, crushing, abrasion attrition and alkali aggregate reaction	2	
1.9	Water and its quality for concreting	1	
2.0	Concrete Production & Fresh properties		
2.1	Batching of ingredients, mixing, transporting, and placing	2	CO2
2.2	Compacting, finishing, and curing of concrete	2	
2.3	Fresh concrete properties: Workability, bleeding and segregation of concrete - Factors influencing it	2	
2.4	Tests on workability of concrete	1	
2.5	Chemical Admixtures: Super plasticizers, plasticizers, retarders, accelerators, air entrained admixtures and	2	
2.6	Pozzolanic admixtures	2	
3.0	Concrete mix proportion		
3.1	Concept of Mix proportion - Quality acceptance criteria as per IS 456:2000	1	CO3
3.2	Design as per IS-10262:2019	2	
3.3	Design problems	2	
3.4	ACI method (procedures only)	1	
4.0	Engineering properties of concrete		
4.1	Compressive strength and parameters affecting it	1	CO4
4.2	Tensile strength - direct and indirect	1	

Module No.	Topic	No. of Hours	Course Outcome
4.3	Modulus of elasticity and Poisson's ratio	1	
4.4	Non-destructive test, partially destructive test	2	
5.0	Dimensional stability and Durability of concrete		
5.1	Creep and Shrinkage of concrete	1	CO5
5.2	Chemical attacks of concrete	2	
5.3	Corrosion of steel rebars	1	
5.4	Corrosion preventive measures, alternate reinforcing materials - epoxy coated bars & fibre reinforced plastics	1	
6.0	Special concretes		
6.1	Properties and applications of: fibre reinforced concrete and high strength concrete,	2	CO6
6.2	Properties and applications of high-performance concrete and reactive powder concrete	1	
6.3	Properties and applications of lightweight concrete and high-density concrete	1	
6.4	Properties and applications of self-compacting concrete and geo-polymer concrete	1	
6.5	Properties and applications of Polymer concrete and its types.	1	
6.6	Properties and applications of Roller compacted concrete and shotcrete	1

22CE570	MATERIALS TESTING LABORATORY	Category	L	T	P	Credit
		PCC	0	0	2	1

Preamble

Students of Civil engineering would get exposure in the properties of engineering materials and to identify the behaviour of the given material.

Prerequisite

Fundamentals of Mathematics, strength of materials and Concrete technology.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Determine the behaviour of structural elements, such as bars, beams and springs subjected to tension, compression, shear, bending and torsion.	TPS3	A+	75
CO2	Determine the physical properties of constituent material of concrete.	TPS3	A+	75
CO3	Determination the properties of fresh concrete.	TPS3	A+	75
CO4	Determine the properties of hardened concrete.	TPS3	A+	75
CO5	Design concrete mixes and apply statistical quality control techniques	TPS3	A+	75
CO6	Explain durability behaviour of concrete	TPS3	A+	75

22CE610	FOUNDATION ENGINEERING

Category	L	T	P	Credit
PCC	3	0	0	3

Preamble

This course offers the theories and methods for accessing the subsurface condition at the construction site, determining the bearing capacity of shallow foundations, load carrying capacity of pile foundations, computing settlement of foundations, earth pressure acting on retaining walls and stability analysis of retaining walls.

Prerequisite

Soil Mechanics

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Plan detailed subsurface exploration program for determining the geotechnical parameters required for the design of foundations	TPS3	A	65
CO2	Compute bearing capacity of shallow foundations and estimate settlement of footings	TPS3	A	65
CO3	Suggest appropriate shallow foundation and Design their dimensions for equal settlement	TPS3	A	65
CO4	Determine the load carrying capacity of pile foundations and pile groups	TPS3	A	65
CO5	Analyse stability of earthen slopes	TPS2	A	65
CO6	Calculate the lateral earth pressure on retaining walls and check their stability.	TPS3	A	65

Course Contents and Lecture Schedule

Module No.	Topic	No. Of Hours	Course Outcome
1.	Subsurface Exploration and Site investigation		
1.1	Objectives of Site Investigation - Stages - Planning	1	CO1
1.2	Methods of Site Investigation - Depth and Spacing of bore holes	2	
1.3	Penetration Tests (SPT and SCPT)	2	
1.4	Disturbed and Undisturbed samples - Sampling techniques - Split Spoon sampler - Thin walled sampler - Stationary Piston sampler	1	
1.5	Rock Sampling - RQD - Use of Bore log	1	
2.	Bearing Capacity and Settlement of Foundation		
2.1	Types of Bearing Capacity - Terzaghi's theory and BIS Formula	2	CO2
2.2	Factors affecting bearing capacity - Bearing Capacity from insitu tests (SPT and SCPT)	2	
2.3	Bearing capacity of Raft Foundation -Types of settlement - Allowable settlement	1	
2.4	Determination of settlement of foundations in granular and clay deposit -Codal Provisions - Contact Pressure	2	
3.	Shallow Foundations		
3.1	Functions - Requisites of foundation -Types of shallow foundations - Selection of Foundation based on soil condition	2	CO3
3.2	Conventional procedure for proportioning of foundations for equal settlement	2	
3.3	Floating foundation - Foundation Drainage	1	
4.	Deep Foundations		
4.1	Consideration leading to selection of pile foundation - Functions and Types of pile foundation - Construction of Piles	2	CO4
4.2	Estimating load carrying capacity of piles by Static formula	2	
4.3	Dynamic Formulae - Pile Load Test	2	
4.4	Negative skin friction in piles - Pile Group - Efficiency and Load Carrying capacity of Pile Group	2	
5.	Stability of Slopes		
5.1	Types of slope failures - Different factors of safety -	2	CO5
5.2	Taylor's stability number - Stability analysis by method of slices and " $\phi_u=0$ " analysis	2	
6.	Lateral earth Pressure and Retaining Walls		
6.1	Types of Lateral Earth pressure - Rankine's Earth Pressure Theory for cohesive and non-cohesive	1	CO6
6.3	Coulomb's earth pressure theory - Culmann's method	2	
6.4	Types of retaining walls - Stability analysis of Gravity and Cantilever retaining walls	2

22CE620	DESIGN OF REINFORCED CONCRETE ELEMENTS

Category	L	T	P	Credit
PC	3	0	0	3

Preamble

The design of modern reinforced concrete structures may appear to be highly complex. However, most of these structures are the assembly of several basic structural elements such as beams, columns, slabs, walls and foundations. Accordingly, the designer has to learn the design of these basic reinforced concrete elements. This course offers the design of reinforced concrete elements such as beams, slabs, columns and footings using Limit State Method. This course follows the recommendations of IS 456:2000. It aims at determination of safe as well as economical sections and their reinforcements under various types of load combinations. At the end of this course, students will be able to identify and apply the design codes relevant to the design of reinforced concrete members and also they will be familiar with professional and ethical issues and the importance of lifelong learning in structural engineering.

Prerequisites

22CE530 Concrete Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the design concepts of structural reinforced concrete elements under various forces and interpret IS codal provisions and design the elements under flexure by working stress design method	TPS3	B+	70
CO2	Design the structural reinforced concrete elements under flexure by limit state design method and detail the reinforcement	TPS3	B+	70
CO3	Design the structural reinforced concrete elements under shear, torsion, anchorage and development length by limit state design method and detail the reinforcement	TPS3	B+	70
CO4	Design the structural reinforced concrete elements under compression by limit state design method and detail the reinforcement	TPS3	B+	70
CO5	Check the serviceability requirements of reinforced concrete elements under deflection and cracking	TPS3	B+	70
CO6	Design the foundation by limit state design method and detail the reinforcement	TPS3	B+	70

Syllabus

Design Methods: concept of working stress method, ultimate load method and limit state method. Advantages of limit state method over other methods. Limit state philosophy as detailed in IS code - characteristic strength and design strength of materials, characteristic loads and design loads, partial safety factors for loads and material strength, cover for durability and fire resistance. Design of beams and slabs by working stress method; Development of spreadsheets; Reinforcement detailing. **Limit state of collapse for flexure:** assumptions, stress-strain curves for concrete and steel, stress block, maximum strain in concrete, limiting values of neutral axis for different grades of steel, balanced and under reinforced sections; Analysis and design of singly and doubly reinforced rectangular and flanges sections - simply supported and continuous beams; Design of one way and two way slabs – simply supported, continuous and restrained using coefficients in IS code; Development of spreadsheets; Reinforcement detailing. **Limit state of collapse for shear, torsion, bond and anchorage:** Design of beams for shear and torsion; Design of beams for combined bending, shear and torsion; Design for development length and end anchorages; Reinforcement detailing. **Limit state of collapse for compression:** Braced and unbraced columns; Design of columns for axial load – square, rectangular and circular cross sections with lateral and spiral ties; Design of columns for uniaxial and biaxial eccentricities using interaction charts; Reinforcement detailing. **Limit state of serviceability:** Serviceability requirements for RC elements; Deflection calculations using IS code coefficients, short term and long-term deflection, crack width calculations. **Design of footing:** Shallow foundation: isolated footing - square and rectangular; combined footing – rectangular and trapezoidal; Development of spreadsheets; Reinforcement detailing.

22CE630	HIGHWAY AND RAILWAY ENGINEERING

Category	L	T	P	Credit
PCC	3	0	0	3

Preamble

The course aims to make the students learn the principles of geometrical design of highways and their components. Further, students will get acquainted with the treatment for failures and remedial measures during maintenance of pavements. This also imparts the student's knowledge of planning, geometrical design, construction and maintenance of railway tracks. The students acquire proficiency in the application of modern techniques such as GIS, GPS and remote sensing.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the basic concepts of highway planning	TPS2	A	70
CO2	Design the geometrical components for Indian roads.	TPS3	A	70
CO3	Gain knowledge on testing procedures of highway material and construction of different types of roads.	TPS2	A	70
CO4	Understand the basics of railway planning and apply them in design of various railway geometrics.	TPS3	A	70
CO5	Understand the functions of various components of railways, points and crossings.	TPS2	A	70
CO6	Understand the concepts of track maintenance and signaling in railways	TPS2	A	70

22CE640	ACCOUNTING AND FINANCE

Category	L	T	P	Credit
HSMC	2	1	0	3

Preamble

Engineering profession involves lots of decision making. The decisions may range from operation to non-operation. For taking decisions of these kinds, an engineer needs among other data about the organization routine operations and non-routine operations. Accounting is a science which provides all the data by recording, classifying, summarizing and interpreting the various transactions taking place in an organization and there by helps an engineer in taking vital decisions in an effective manner. Finance is an allied but a separate field relying on accounting and enables engineers in taking useful financial and cost related decisions by providing well defined concepts, tools and techniques.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to:

Cos	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Prepare financial statements of accounting and study them with common size statements and comparative statements.	TPS3	B+	65
CO2	Perform cost sheet, depreciation and its applications in business.	TPS 3	A	75
CO3	Compute various types of budgets in an organization	TPS 3	A	75
CO4	Practice break-even analysis and activity-based costing systems for a business applications.	TPS 3	B+	65
CO5	Compute working capital investment decisions.	TPS 3	B+	65
CO6	Apply the appropriate sources of finance and mobilize the right quantum of finance and use them in most profitable investment avenues.	TPS 2	B+	65

Syllabus

Accounting Introduction definition, functions of accounting, accounting principles. Preparation of financial statements and study them with common size and comparative statements. **Cost Accounting** - Meaning and importance - Elements of cost - classification of cost -Cost Centre, Preparation of cost sheet and its applications. Depreciation— meaning and causes of depreciation, Methods to find out the depreciation. **Budget and Budgetary control**- Introduction- Meaning - objectives of budgetary control —Budget-Types of budgets and their preparation. **Marginal costing**-Introduction, Break even analysis—Managerial of break even analysis. Activity based Costing. **Capital budgeting**-Meaning and features, capital budgeting decisions, Methods of evaluating capital budgeting decisions by traditional and modern methods. Working capital management - concept, classification, Estimation of working capital requirements. **Finance**: Functions, Objectives of financial management and Source of finance and financial institutions, Venture capital. Analysis Case Studies: Cost management in the construction industry. (Only for assignment)

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	COs
1.0 Project and its process			
1.1	Introduction, Definition, Functions of accounting	1	CO1
1.2	Accounting principles	1	
1.3	Preparation of Financial statements	3	
1.4	Common size statement analysis	1	
1.5	Comparative statement analysis	1	

2.0 Cost Accounting			
2.1	Meaning, importance and Elements of cost	1	CO2
2.2	classification of cost and meaning of Cost centre,	1	
2.3	Preparation of Cost sheet and its applications	3	
2.4	Depreciation – meaning and causes of depreciation	1	
2.5	Methods to find out the depreciation	2	
3.0 Budget and Budgetary control			
3.1	Introduction- Meaning -objectives of budgetary control	1	CO3
3.2	Budget- Types of budgets and their preparation	4	
4.0 Marginal costing			
4.1	Introduction, Breakeven analysis	2	CO4
4.2	Managerial uses of breakeven analysis.	1	
4.3	Activity Based Costing	2	
5.0 Capital budgeting			
5.1	Meaning and features, capital budgeting decisions	1	CO5
5.2	Methods of evaluating capital budgeting decisions by traditional and modern methods	4	
5.3	Working capital management - concept, classification,	1	
5.4	Estimation of working capital requirements.	1	
6.0 Finance			
6.1	Functions and Objectives of Financial Management	1	CO6
6.2	Source of Finance and financial Institution	2	
6.3	Venture Capital	1	
Total Periods		36

22EG660	PROFESSIONAL COMMUNICATION

Category	L	T	P	Credit
HSMC	0	1	2	2

Preamble

The prime focus of this course is to enhance the employability and career skills of students with an emphasis on grooming them as value-driven professionals. The practice of essential language skills improves their ability to communicate persuasively and ensures their industry-readiness to face real-life challenges.

Prerequisite

Basics of Technical English

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Demonstrate adequate soft skills relevant for workplace	TPS3	70%	70%
CO2	Listen and respond to native and non-native accented delivery	TPS3	65%	65%
CO3	Interpret general/technical topics in group discussion	TPS3	70%	70%
CO4	Present effectively both in general and technical contexts and interviews	TPS3	70%	70%
CO5	Exhibit verbal aptitude skills through reading and writing	TPS3	70%	70%
CO6	Write error-free business correspondence	TPS3	70%	70%

Internal Assessment

Students' performance will be continuously assessed in various classroom activities that include Listening, Speaking, Reading and Writing components for 60 marks as detailed below:

Listening Test	- 10
Speaking Test (Group Discussion, Mock interview and Technical Presentation)	- 30
Reading and Writing Test	- 20
Total	- 60

End Semester Assessment (LAB):

Listening Test	- 20
Group Discussion	- 20
Personal Interview / BEC - Vantage speaking Task 2	- 20
General Aptitude Test	- 40
Total	-100

22CE670	FLUID MECHANICS AND MACHINERY LAB

Category	L	T	P	Credit
PCC	0	0	2	1

Preamble

This laboratory is used in conjunction with Fluid Mechanics course in reinforcing the fundamentals of fluid mechanics and machinery by hands on experiment.

Prerequisite

22CE330, 22CE430

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Measure the rate of flow in pipe section as well as in open channel sections.	TPS3	A+	80
CO2	Apply the Bernoulli's theorem in real fluid flow problems.	TPS3	A+	80
CO3	Determine experimentally the losses in closed conduits	TPS3	A+	80
CO4	Determine experimentally the performance of hydraulic machines such as turbines and pumps.	TPS3	A+	80

Mapping with Programme Outcomes and Programme Specific Outcomes

S- Strong; M-Medium; L-Low

Assessment Pattern

Students are Examined for 40% in internal and 60% in terminal Examination.

Duration:3 Hours

List of Experiments

S.No	Description	No of Hours	Course Outcome
1.	Determination of coefficient of discharge of small orifice	2	CO1
2.	Flow measurement in pipe using orificemeter	2	
3.	Flow measurement in pipe using venturimeter	2	
4.	Flow measurement in open channel using notches	2	
5.	Verification of Bernoulli's theorem	2	CO2
6.	Determination of frictional loss in pipes	2	CO3
7.	Study of impact of jet on vanes	2	CO4

8.	Performance test on turbines (Pelton wheel, Francis and Kaplan turbine)	4	
9.	Performance test on pumps (Centrifugal, Submersible and Reciprocating pump)	6	
Total Hours		24

22CE680	ANALYSIS AND DESIGN LABORATORY

Category	L	T	P	Credit
PCC	-	-	2	1

Preamble

This Laboratory is intended to provide students with opportunities to acquire knowledge and to develop skills in Analysis and Design software's. The course shows how to use Analysis and Design software to analyse and design 2D and 3D systems. This course also introduces recommended design provisions such as IS456, IS800 and drafting standards for students to use for properly preparing design reports and detail drawings using Analysis and Design software.

Prerequisite

22CE320 - Mechanics of Solids, 22CE420- Structural analysis, 22CE520 - Design of steel elements

Course Outcomes

On the successful completion of the course students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency (Grade)	Expected Attainment Level %
CO1	Model 2D and 3D structures to perform analysis using software.	TPS3	B+	70
CO2	Analyze of statically indeterminate beams for the given loads and Generate an appropriate report.	TPS3	B+	70
CO3	Analyze multistory & multi bay rigid frames for the given loads and Generate an appropriate report.	TPS3	B+	70
CO4	Analyze and design a G+2 RCC frame structure under Dead Load, Live Load and Wind Load and Generate an appropriate report for the given structure.	TPS3	B+	65
CO5	Analyze and design of pitched roof truss for its Dead Load, Live Load and Wind Load and Generate an appropriate report for the given structure.	TPS3	B+	65
CO6	Design of Foundation and Generate an appropriate report and drawings for the given structure.	TPS3	B+	65

22CE710	CONSTRUCTION MANAGEMENT

Category	L	T	P	Credit
PCC	2	0	0	2

Preamble

This course imparts knowledge on Construction Management principles needed for execution of projects effectively and efficiently

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Enumerate the objectives and principles of construction management	TPS2	B+	70
CO2	Discuss the components involved in planning of resources for construction projects	TPS3	B+	70
CO3	Enumerate tendering and contractual procedure and systems of execution of construction works	TPS3	B+	70
CO4	Explain the process involved in measurement of construction works and preparation of accounts	TPS3	B+	70
CO5	Specify the process involved in maintenance and management of stores in construction projects	TPS2	B+	70
CO6	Classify wastes in construction sites, apply lean principles and tools to minimize waste and maximize value	TPS3	B+	70

Syllabus

Construction Management – General Principles – need, objectives and functions, Classification and stages involved in construction projects - Construction team - **Preliminary planning of a scheme – Construction planning. Tendering and contractual procedures** - definition of tender and contract. Deposits – Earnest Money Deposit and Security Deposit – legal implications – Penalties and Arbitration- **Execution of works:** Methods - Departmental labour- Muster Roll system and Casual Labour system. EPC and other forms of contracts. **Measurement of Works**-M-book, Types of measurements – original, pre and check measurement. Maintenance of Accounts –Types of bills and payment – completion reports and completion certificates. **Stores:** Classification and Codification systems - inspection and maintenance – Stock verification procedures. **Concept of Lean:** Classify wastes in construction sites, apply lean principles and tools to minimize waste and maximize value.

22CE720	IRRIGATION AND WATER RESOURCES ENGINEERING

Category	L	T	P	Credit
PCC	3	0	0	3

Preamble

This subject deals with study of water resources potential and various irrigation methods practiced in our country and also to understand an irrigation system and its components.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Outline the importance and status of water resources potential of our country and water policy.	TPS2	A	75
CO2	Illustrate the different types and methods of irrigation practices.	TPS3	A	75
CO3	Compute the storage capacity of reservoir and the forces acting on dam.	TPS3	A	75
CO4	Describe the functions of each components of Diversion headwork.	TPS3	A	75
CO5	Identify the location of Cross Drainage Works and design the canal.	TPS3	A	75
CO6	Describe the components of tank irrigation and the concept of irrigation management transfer.	TPS2	A	75

Module No.	Topic	No. of Hours	Course Outcome
1.	Importance of Water Resources		CO1
1.1	Status of water resources in India and Tamilnadu.	1	
1.2	Requirement of water for various uses-Needs for water conservation, water harvesting techniques.	1	
1.3	Salient points of National Water Policy and linking of rivers	1	
1.4	Impact of climate change on water resources	1	
2.	Irrigation		CO2
2.1	Need, advantages and ill effects of irrigation.	1	
2.2	Types and methods of irrigation, lift and rain fed irrigation, modern irrigation practices.	2	
2.3	Soil Water Plant relationship.	1	
2.4	Irrigation efficiencies, Irrigation water quality.	1	
2.5	Duty and Delta, methods of improving duty.	1	
3.	Reservoir Planning and Dams		CO3
3.1	Classification of reservoirs, Surveys conducted, Site selection for reservoir	1	

3.2	Storage zones, determination of Storage capacity of reservoir	1	
3.3	Reservoir sedimentation, methods of controlling the sedimentation,	1	
3.4	Classifications of dams, selection of dams.	1	
3.5	Forces acting on gravity dam.	1	
3.6	Failures and remedies of gravity dam.	1	
3.7	Elementary and practical profile of gravity dam, Drainage galleries in dams.	1	
3.8	Types of spillways.	1	
4	Diversion Headwork		CO4
4.1	Components of diversion headwork and its functions	2	
4.2	Types, failures and remedies of weir	2	
4.3	Design of impervious floor of weir by Bligh's theory and Lanes weighted creep theory.	2	
4.4	River training works.	2	
5	Canals and Cross drainage works		CO5
5.1	Classification and alignment of canal	1	
5.2	Design of canal by Kennedy's theory.	2	
5.3	Design of canal by Lacey's theory	1	
5.4	Need, location and types of canal falls.	1	
5.5	Water logging, causes and effects, Canal lining and Canal maintenance.	1	
5.6	Functions of Aqueduct, Syphon aqueduct, Level crossing, inlet and outlet, Canal outlets.	1	
6.	Irrigation Water Management		CO6
6.1	Tank irrigation-Components of tank irrigation.	1	
6.2	Functions of water user association.	1	
6.3	Automation and sensors in irrigation systems-Software in water resources.	1	
Total hours		36

22CE760	ESTIMATION AND COSTING LABORATORY	Category	L	T	P	Credit
		PCC	0	0	2	1

Preamble:

This lab course focuses on students acquiring knowledge on arriving at quantities of items of works for buildings and road projects. It also gives an exposure to rate analysis for different types of works knowing its specifications

Prerequisite

Nil

Course Outcomes

On the successful completion of the course students will be able to

CO	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the detailed specifications of various activities in construction works	TPS 3	A	80
CO2	Estimate quantities of items of works for residential buildings of load bearing type - Individual wall method	TPS 3	A	80
CO3	Estimate quantities of items of works for residential buildings of load bearing type - Centre line method	TPS 3	A	80
CO4	Estimate quantities of items of works for residential buildings of framed type	TPS 3	A	80
CO5	Estimate quantities of earthwork in cutting and embankment for road work	TPS 3	A	80
CO6	Conduct rate analysis for various activities involved in construction works	TPS 3	A	80

22CE770	ENVIRONMENTAL ENGINEERING LABORATORY	Category	L	T	P	Credit
		PCC	0	0	2	1

Preamble

This laboratory course work is intended to impart hands-on training in evaluating the water quality parameters, wastewater characteristics and ambient air quality status measurements. This will form the basic input data for arriving at a solution/treatment for upkeep of the environment and promoting public health.

Prerequisite

Water supply Engineering, Wastewater Engineering

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment level
CO1	Determine the chemical characteristics of Water from different sources.	TPS3	A+	90
CO2	Determine the chemical characteristics of Wastewater generated from the community.	TPS3	A+	90
CO3	Calculate the necessary dosage of coagulant and disinfectant for the effective removal of turbidity and pathogens from water/wastewater.	TPS3	A+	90
CO4	Measure the ambient air quality parameters such as Particulate Matter, NO _x and SO _x .	TPS3	A+	90
CO5	Physically Characterize the municipal solid waste.	TPS3	A+	90
CO6	Assess the noise level in an area.	TPS3	A+	90

List of Experiments/Activities with CO Mapping

S.No	Description	No of Hours	Course Outcome
1.	Determination of Fluorides and Nitrates in drinking water – Spectro photometric analysis.	2	CO1
2.	Determination of Sulphate in water sample - Turbiditymetric analysis.	2	CO1
3.	Determination of Dissolved oxygen in drinking water.	2	CO1
4	Determination of sodium and potassium in water sample using Flame Photometer	2	CO1

5	Determination of Total solids, suspended solids, Dissolved solids, Organic solids, Inorganic solids in water and wastewater samples.	2	CO2
6	Determination of BOD and COD of wastewater	2	CO2
7	Determination of Oil and greasy matters in wastewater samples.	2	CO2
8	Optimum coagulant dosage for removal of turbidity in water.	2	CO3
9	Estimation of chlorine dosage for disinfection of water.	2	CO3
10	Measurement of Ambient air quality parameters - Particulate Matter, SO ₂ , NO _x	2	CO4
11	Physical characterization of municipal solid waste	2	CO5
12	Measurement of a sound pressure level in a working area using a sound level meter	2	CO6
Total Hours		24	

Demonstration Experiments:

1. Heavy metal measurement using AAS.

22CE780	SOIL AND HIGHWAY ENGINEERING LABORATORY	Category	L	T	P	Credit
		PCC	0	0	2	1

Preamble

This laboratory course is intended to give hands-on training to determine various index and engineering properties of soil, compaction characteristics, predict the properties of aggregates and sub grade material. With these properties, students will be able to identify, classify and appreciate the use of soil and aggregates as suitable construction materials, design appropriate foundations and pavements.

Prerequisites

Soil Mechanics

Course Outcomes

On the successful completion of the course students will be able to

CO	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Conduct tests to determine index properties of soil such as Moisture Content, Specific Gravity and Atterberg's Limits	TPS3	A+	75
CO2	Conduct tests to determine Field Density and Particle Size Distribution of soil	TPS3	A+	75
CO3	Determine the Coefficient of Permeability of soil	TPS3	A+	75
CO4	Estimate the Shear Strength parameters of Cohesionless and Cohesive soils	TPS3	A+	75
CO5	Predict the Compaction & consolidation characteristics of soil and evaluate the Strength of Sub Grade material	TPS3	A+	75
CO6	Perform tests for accessing the suitability of bitumen and aggregates in Highway and Railway works	TPS3	A+	75

Mapping with Programme Outcomes and Programme Specific Outcomes

List of Experiments/Activities with CO Mapping

S. No	Description	No. of hours	Course Outcome
1	a. Determination of Specific Gravity of soil using Pycnometer. b. Determination of Water Absorption and Specific Gravity of Aggregates (size > 40mm). c. Determination of Penetration value of Bitumen.	2	CO1, CO6
2	(a) Determination of Moisture Content of soil by Oven Drying method (b) Determination of Shrinkage Factors of soil. (c) Determination of Softening Point of Bitumen.	2	CO1, CO6
3	Determination of Liquid and Plastic Limits of soil.	2	CO1
4	Grain size Distribution Analysis for soil.	2	CO2
5	Determination of Field Density of soil by sand Replacement Method.	2	CO2
6	Determination of Coefficient of Permeability of soil by Constant Head Permeability Test.	2	CO3
7	Determination of Coefficient of Permeability of soil by Variable Head Permeability Test.	4	CO3
8	Determination of Shear Strength parameters of soil by Direct Shear Test.	2	CO4
9	(a) Determination of Unconfined Compressive Strength of clay. (b) Determination of Consolidation Properties of soil.	2	CO4, CO5
10	Determination of Dry Density - Moisture Content relation using Light Compaction (Standard Proctor Compaction Test).	2	CO5
11	Determination of California Bearing Ratio value of sub grade soil.	2	CO5
12	(a) Determination of Impact Value of aggregates. (b) Determination of Flakiness and Elongation Indices of aggregates.	2	CO6
	Total Hours	24	

Demonstration Experiments:

1. Grain Size Distribution - Hydrometer Analysis
2. Determination of Los Angeles Abrasion value of aggregates.

22CEPA0	FINITE ELEMENT ANALYSIS

Category	L	T	P	Credit
PSE	2	1	0	3

Preamble

This course provides an introduction to the finite element analysis, from engineering rather than a purely mathematical point of view.

Prerequisite

Fundamentals of Mathematics, knowledge of forces, resolution of forces and equilibrium concepts.

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Execute the potential energy concepts, equations of equilibrium weak and variational formulation	TPS3	A	70
CO2	Resolve the stresses and reaction forces in one dimensions	TPS3	A	70
CO3	Resolve the stresses and forces in trusses	TPS3	A	70
CO4	Resolve two dimensional problems using constant strain triangle Elements	TPS3	A	70
CO5	Execute is parametric formulation for two dimensional problems	TPS2	A	75
CO6	Resolve the Gaussian quadrature of one- and two-dimensional integrals	TPS3	A	70

22CEPB0	DYNAMICS OF STRUCTURES AND EARTHQUAKE ENGINEERING	Category	L	T	P	Credit
		PSE	3	0	0	3

Preamble

This course deals with the dynamic analysis of single and multi-degree freedom systems. It covers the dynamic response of a single-degree-of-freedom system with damping subjected to harmonic excitation and its solving techniques and the response of linear multi-degree-of-freedom systems regarding natural frequencies and mode shapes. This course also offers to introduce the EQ phenomenon, including the causes, occurrence, seismic hazard analysis and its effect on the built structures and explains the aspects of the earthquake-resistant design of RC Structures and shear walls.

Prerequisite

Structural Analysis

Course Outcomes

On the successful completion of the course students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Establish the equation of motion and determine the response of a single Degree of freedom system under free vibration with or without damping logarithmic decrement.	TPS3	B	70
CO2	Perform Eigenvalue analysis of multi Degree of Freedom system with DoFs upto three and earthquake excitation	TPS3	B	70
CO3	understand the seismology, causes of an earthquake and effects of ground motion	TPS2	B	75
CO4	Understand how Seismic Hazard analysis helps to obtain Ground motion parameters and evaluate liquefaction potential	TPS2	B	75
CO5	Exercise the procedure for seismic analysis of RC buildings as per IS1893:2016 code provisions and apply the principles of ductile detailing in reinforced concrete structures as per IS 4326 and IS 13920	TPS3	B	70
CO6	Demonstrate the behaviour and Design of Shear wall	TPS3	B	70

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1.	Introduction to vibration and damping		
1.1	Single degree of freedom system, mass-spring-damper system	1	CO1
	Free Vibration		
1.2	Formation of the equation of motion and response of undamped SDOF system	1	CO1
1.3	Formation of equation of motion of SDOF and its response damped system	1	CO1
1.4	Delay in motion. Determination of damping using logarithmic decrement method.	1	CO1
1.5	Response of single degree of freedom undamped and damped system to harmonic excitation	1	CO1
1.6	Response of single degree of freedom undamped and damped system to periodic excitation	1	CO1
2	Multi degree of freedom system:		
2.1	Formulation of equation of motion for two and three degree of freedom systems with or without damping	1	CO2
2.2	Formulation of equation of motion for two and three degree of freedom systems with damping	2	CO2
2.3	Perform Eigenvalue analysis of two and three degree freedom system	2	CO2
2.3	Finding mode shapes and natural frequencies for free vibrations	2	CO2
2.4	Dynamic analysis and response of linear system.	1	CO2
3.	Seismology		
3.1	Seismic waves - Earthquake magnitude, intensity of earthquake	1	CO3
3.2	Potential deficiencies of RC building and masonry building	3	CO3
3.3	Short column effect -Soft Storey and weak storey	1	CO3
3.4	Remedial measures for earthquake resistant buildings	2	CO3
4.	Seismic Hazard Analysis		
4.1	Deterministic Seismic Hazard Analysis (DSHA)	2	CO4
4.2	Moment magnitude ,Attenuation Relationship	2	CO4
4.3	Seismic Hazard Curves	1	CO4
4.4	Evaluation of liquefaction potential as per IS 1893:2016 (Part-1)	3	
5.	Design methodology		
5.1	Planning considerations / Architectural concepts as per IS:4326 – 1993	1	CO5
5.2	Equivalent Static analysis - Response spectrum method as per IS 1893:2016 (Part-1)	2	CO5
5.3	Lateral force evaluation in masonry buildings	1	CO5
6.	Shear wall		
6.1	Necessity of shear wall and Introduction	1	CO6
6.2	Types of shear wall	1	CO6
6.3	Design of shear wall as per IS:1893-2016(Part-1) and details as per IS:13920 – 2008.	2	CO6

22CEPC0	PRESTRESSED CONCRETE

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

Prestressed concrete is extensively used in bridges, multistorey buildings and many other important parts of today's modern infrastructure. The inherent weakness of concrete in tension is offset by introducing a pre-compression in a prestressed member, which improves its service load behaviour such as reduced deflections and cracking. An advanced understanding of its behaviour is essential before safe and economical designs can be produced. This course will provide a detailed coverage of the behaviour of prestressed concrete, analysis and design for strength and serviceability of prestressed concrete members, such as beams and slabs including continuous members, and anchorage design and losses in prestress under IS codal provisions.

Prerequisite

22CE620 Design of Reinforced Concrete Elements

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Describe the systems and methods of prestressing and its analysis	TPS3	B	70
CO2	Determine the losses of prestress and deflection of prestressed concrete beams	TPS3	B	70
CO3	Analyse and design the prestressed concrete beams and slabs under various forces	TPS3	B	70
CO4	Analyse the prestressed concrete continuous beams	TPS3	B	70
CO5	Analyse and design the circular prestressed concrete members	TPS3	B	70
CO6	Analyse the composite prestressed concrete members	TPS3	B	70

Course Contents and Lecture Schedule

Module No.	Topics	No. of Lectures	Course Outcomes
1.	Systems of prestressing and its analysis		
1.1	Basic concepts of prestressing, need for high strength steel and concrete, advantages, applications and partial prestressing	1	CO1
1.2	Pre-tensioning system - Hoyer's method	1	CO1
1.3	Post-tensioning systems – Freyssinet, Gifford-Udall, Magnel-Blaton, Lee-McCall systems	2	CO1
1.4	Analysis of prestress -resultant stress at a section – concentric tendon, eccentric tendon, bent tendon, parabolic tendon, pressure line or thrust line, concept of load balancing, cracking moment.	2	CO1
2.	Losses of prestress and Deflection of PSC members		
2.1	Loss of prestress due to elastic deformation of concrete and shrinkage of concrete	1	CO2
2.2	Loss of prestress due to creep of concrete and relaxation of stress in steel	1	CO2
2.3	Loss of prestress due to friction and anchorage	1	CO2
2.4	Factors influencing deflection and its importance	1	CO2
2.5	Short term deflection - tendons of various profile - self weight and imposed loads; long term deflections	2	CO2
3.	Flexural and shear strength of PSC members		
3.1	IS codal provisions - Flexural strength	1	CO3
3.2	Shear resistance - web shear crack, flexure-shear cracks	1	CO3
3.3	Design of sections for flexure	1	CO3
3.4	Design of section for shear	1	CO3
3.5	Design of slabs	1	CO3
3.6	Design of Anchorage zone reinforcement - IS and Magnel methods	2	CO3
4.	Continuous PSC members		
4.1	Advantages, primary moment, secondary moment, resultant moment, pressure or thrust line, line of prestress	1	CO4
4.2	Concordant cable profile, concept of linear transformation	1	CO4
4.3	Analysis of two span continuous beams - Procedure	2	CO4
4.4	Analysis of two span continuous beams	2	CO4

5.	Circular prestressing		
5.1	Analysis & design of prestressed concrete pipes	2	CO5
5.2	Analysis & design of prestressed concrete pole	2	CO5
5.3	Analysis & design of water tanks	2	CO5
6.	Composite Construction		
6.1	Types of composite members	1	CO6
6.2	Analysis of composite members	2	CO6
6.3	Deflection of composite members	2	CO6

22CEPD0	BRIDGE ENGINEERING

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

Bridge is a structure built to span physical obstacles without closing the way underneath such as a body of water, valley, or road, for the purpose of providing passage over the obstacle. There are many different designs that each serve a particular purpose and apply to different situations. Designs of bridges vary depending on the function of the bridge, the nature of the terrain where the bridge is constructed and anchored, the material used to make it, and the funds available to build it. This course offers the design of bridges such as RCC bridges, design principles of steel and prestressed concrete bridges, design principles of substructure and design of different types of bearings as per IRC loadings standards, Indian Railway standards bridge rules and MOST codes. It aims at determination of safe as well as economical section using different kinds of material used in construction and maintenance.

Prerequisite

Design of reinforced concrete elements

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Understand the different type of bridges and its alignments and site selection and hydraulics particulars	TPS2	B	70
CO2	Design of culverts and deck slab bridges	TPS3	B	65
CO3	Design of T beam deck slab bridges for IRC loadings	TPS3	B	65
CO4	Design box girders	TPS3	B	65
CO5	Design prestressed concrete bridges	TPS3	B	65
CO6	Design of bridge bearings and piers	TPS3	B	65

22CEPE0	FRACTURE MECHANICS

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

The conventional design of a structure does not take in to account flaws or cracks in the materials, which largely affect the residual strength of a structure. The aim of this course is to predict the crack front growth and instability under elastic and elasto plastic conditions and to compute the stress intensity factors and strain energy release rate. This course is designed to show how these concepts can be integrated and applied to practical engineering problems using modern computational mechanics techniques.

Prerequisite

Mechanics of Materials

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Understand the various theories of failures of structural materials with pre existing cracks	TPS2	B	65
CO2	Apply the principles of Linear Elastic Fracture Mechanics	TPS3	B	65
CO3	Understand Elastic Plastic Fracture Mechanics	TPS2	B	65
CO4	Understand the Fatigue Crack Growth principle	TPS2	B	65
CO5	Understand the principles of Crack Arrest mechanism	TPS2	B	65
CO6	Apply the Numerical methods to predict the crack growth	TPS3	B	65

Syllabus

Introduction-Review of Engineering Failure Analysis-Brittle fracture-Ductile fracture Modes of fracture failure, The Griffith energy Balance Approach-Crack tip Plasticity-Fracture toughness
Linear elastic fracture Mechanics-Elastic crack tip stress field Stress and displacement fields in isotropic elastic materials-Westergaard's approach (opening mode)-Plane Strain Fracture toughness (K_{IC}) testing-Feddersen approach, Determination of R curve, Energy released rate for DCB specimen-An elastic deformation at crack tip-K_{1c} Test techniques, Various test specimens-Critical energy release rate
Elastic Plastic Fracture Mechanics- Limitation of K approach -Approximate shape and size of the plastic zone-Effective crack length-Effect of plate thickness-Elastic plastic fracture concept-Crack tip opening displacement-Dugdale approach-Path independence, Critical J integral-Evaluation of CTOD- Relationship between CTOD, K₁ and G₁ for small scale yielding
Fatigue Crack Growth- Fatigue crack growth to sharpen the tip, SN curve-methods to determine J_{1c}Mechanism of Fatigue, Fatigue crack propagation-Paris law-Crack closure mechanism-Residual stresses at crack tip-Retardation effect fatigue crack growth test, stress intensity factor, factors affecting stress intensity factor-Variable amplitude service loading, Interaction effects
Crack Arrest & Numerical methods Principles of crack arrest, crack arrest in practice-R Curves, Crack resistance curve, Eutectic process Numerical Methods and Approaches in Fracture Mechanics, Direct methods to determine fracture parameters Indirect methods to determine fracture parameters

Course Contents and Lecture Schedule			
Module No.	Topic	No. of Hours	Course Outcome
1.0	Introduction		
1.1	Review of Engineering Failure Analysis	1	CO1
1.2	Inglish Stress concentration factors	1	CO1
1.3	Brittle fracture-Ductile fracture	2	CO1
1.4	Modes of fracture failure	1	CO1
1.5	The Griffith energy Balance Approach	1	CO1
1.6	Crack tip Plasticity, Fracture toughness	1	CO1
2.0	Linear Elastic Fracture Mechanics		
2.1	Elastic crack tip stress field	1	CO2
2.2	Stress and displacement fields in isotropic elastic materials	1	CO2
2.3	Westergaard's approach (opening mode)	1	CO2
2.4	Plane Strain Fracture toughness (K _{IC}) testing	1	CO2
2.5	Feddersen approach, Determination of R curve.	1	CO2
2.6	Energy released rate for DCB specimen	1	CO2
2.7	Anelastic deformation at crack tip	1	CO2
2.8	K _{IC} Test techniques, Various test specimens	1	CO2
2.9	Critical energy release rate	1	CO2
3.0	Elastic Plastic Fracture Mechanics		
3.1	limitation of K approach	1	CO3
3.2	Approximate shape and size of the plastic zone	1	CO3
3.3	Effective crack length	1	CO3
3.4	Effect of plate thickness	1	CO3
3.5	Elastic plastic fracture concept	1	CO3
3.6	Crack tip opening displacement	1	CO3
3.7	Dugdale approach	1	CO3
3.8	Path independence , Critical J integral	1	CO3
3.9	Evaluation of CTOD	1	CO3
3.10	Relationship between CTOD, K _I and G _I for small scale yielding	1	CO3
4.0	Mixed-mode fracture analysis		
4.1	First order crack kinking theory	2	CO4
4.2	second order crack kinking theory	1	CO4
4.3	interaction diagram	1	CO4
5.0	Crack Arrest & Numerical methods		
5.1	Principles of crack arrest, crack arrest in practice	1	CO5
5.2	K-R Curves	1	CO5
5.3	Crack resistance curve	1	CO5
5.4	Numerical Methods and Approaches in Fracture Mechanics	1	CO6
5.5	Direct methods to determine fracture parameters	1	CO6
5.6	Indirect methods to determine fracture parameters	1	CO6

22CEPF0	INSTRUMENTATION IN CIVIL ENGINEERING	Category	L	T	P	Credit
		PSE	3	0	0	3

Preamble

This course deals with the various instruments that are used in civil engineering and to expose the students about the significance of measurements and applications. At the end of the course the students will be able to acquire knowledge on various types of measuring instruments used in civil Engineering, understand the principle of operation of measuring instruments, explain the operation of instruments related to static and dynamic measurements, understand the principle of operation of structural measuring instruments.

Prerequisite

Fundamentals of physics

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Understand the basic circuits for measuring instruments	TPS2	B	70
CO2	Apply the instrument techniques which is suited for structural related problem in civil engineering	TPS3	B	65
CO3	Apply seismic instruments for measuring the motion of vibration in structures	TPS3	B	65
CO4	Apply for the environmental related problems by using the various measuring instruments	TPS3	B	65
CO5	Understand the principle for usage of flow meters in flow measurements	TPS2	B	70
CO6	Apply various NDT technique to solve practical problems and its principle of operation	TPS3	B	65

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1	Basic forces for indicating instruments		
1.1	Introduction - Permanent moving coil instrument	1	CO1
1.2	Shunts and Multipliers , Moving iron instruments	1	CO1
1.3	Construction and operating principles of attraction and repulsion types	1	CO1

1.4	Wheat stone bridge Kelvin's double bridge	1	CO1
1.5	Maxwell's bridge, Hay's bridge, Wein bridge	1	CO1
2	Structural Instrumentation		
2.1	Classification of transducers - Capacitive, inductive, photo electric transducer	1	CO2
2.2	LVDT ,velocity transducer	1	CO2
2.3	Load cell, Hydraulic load cell, Pneumatic load cell, Torque meter and Load cells using strain gauges	1	CO2
2.4	Elastic force transducers, Elcometer	1	CO2
2.5	Cathode ray tube, Principle of operation	1	CO2
2.6	X-Y recorder, Strip chart recorder, Galvanometric type strip chart recorder	1	CO2
3	Motion Measurements		
3.1	Relative motion measuring devices, Vibration measurements	1	CO3
3.2	Principle of seismic instruments	1	CO3
3.3	Displacement measurements, Acceleration measurement	1	CO3
3.4	Velocity measurement Time and frequency measurement	1	CO3
3.5	Angular motion measurement, Eddy current drag cup tachometer	1	CO3
3.6	Optical methods Pneumatic gauges, Surface roughness measurements	1	CO3
3.7	Stylus method, Photo electric type tachometer	1	CO3
4	Environmental pollution		
4.1	Orsat apparatus, Gas chromatograph	1	CO4
4.2	Measurement of automobile emission, stack emission	1	CO4
4.3	Viscosity measurement, Capillary tube viscometer	1	CO4
4.4	Liquid level measurement, Rotameter type viscometer	1	CO4
4.5	Efflux viscometer, Slight glass method	1	CO4
4.6	Capacitance type liquid gauge	1	CO4
4.7	Ultrasonic liquid level gauge	1	CO4
5	Flow measurements		
5.1	Primary methods	1	CO5
5.2	Ultrasonic flow meter, Electromagnetic flow meter	1	CO5
5.3	Turbine flow meter	1	CO5
5.4	Lobed impeller meter, Rotary vane flow meter	1	CO5
6	NDT Methods		
6.0	Rebound hammer method, Ultra sonic pulse velocity technique	1	CO6
6.1	X-ray method, Gamma ray method	1	CO6
6.2	Plane polariscope	1	CO6
6.3	Circular polariscope	1	CO6
6.4	Corrosion measurements - linear polarization resistance	1	CO6
6.5	Open circuit potential measurements	1	CO6
6.6	Electrical impedance spectroscopy	1	CO6

22CEPG0	DISASTER MITIGATION AND MANAGEMENT

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

This course deals with the earthquake disaster and their effects against built structures, and Hazard Assessment procedure in India. This course also deals with the methods of mitigating various hazards such that their risk and impact on communities is reduced.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to:

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the various types of disaster and disaster management cycle	TPS2	B	70
CO2	Apply the basics of vibration for Earthquake hazard	TPS3	B	70
CO3	Identify the potential deficiencies exist in RC building and masonry buildings	TPS2	B	70
CO4	Apply the principle of liquefaction to identify the potential for liquefied soil and introduce DSHA	TPS3	B	70
CO5	Understand the vulnerability reduction technique adopted by NDRF, State and local bodies	TPS2	B	70
CO6	Understand the capacity enhancement in the form of life saving skills and community and contingency plan	TPS2	B	70

22CEPH0	REPAIR AND REHABILITATION OF STRUCTURES

Category	L	T	P	Credit
PE	3	0	0	3

Preamble

To impart knowledge on understanding the properties of concrete, causes of its failure, effects and measures to repair and rehabilitate it.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course students will be able to:

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the factors affecting the durability of concrete structures	TPS2	B	80
CO2	Identify the causes and effects of distress in concrete structures	TPS2	B	80
CO3	Diagnose the condition of concrete structures using visual, Non-Destructive and Destructive approaches with case studies.	TPS3	B	80
CO4	Enumerate the concept of quality assurance in structures, basic mechanisms by which quality assurance schemes are developed and operated.	TPS3	B	80
CO5	Suggest suitable materials of repair related to the distress with case studies	TPS3	B	80
CO6	Suggest suitable techniques of repair/rehabilitation to distress structures with case studies	TPS3	B	80

Syllabus

Durability of Concrete Structures - Durability of concrete in sea water- action of sewage – thermal properties of concrete – fire resistance – resistance to freezing and thawing – resistance to abrasion, erosion and cavitation. **Distress in concrete structures- causes and effects** - effects due to climate, temperature, chemicals, wear and erosion, design and construction errors, Effects of distress in concrete structures, Cracks, delamination, Pop outs, Scaling. Effects due to disasters. **Quality of Concrete structures-** Condition Assessment- Inspection, structural appraisal, economic appraisal- Diagnosis of distress – Procedure, Methods of assessing the quality of concrete-NDT and DT. Quality assurance – need-components- conceptual bases of quality assurance schemes, Basic methods of development and operation of QAS. **Materials for Repair** – Special cements for accelerated strength gain, expansive cement, Dry pack, preplaced aggregate concrete, epoxy bonded concrete, shotcrete, Gunite, silica fume concrete, polymer concrete system, self-healing concrete, foam concrete, Fibre reinforced Polymers. **Techniques of Repair/Rehabilitation** – Rust eliminators and polymer coating for rebars during repair, Crack treatment, Plate bonding, RCC jacketing, Fibre wrap technique, Foundation rehabilitation methods, Case studies on distress concrete structures and type of treatment done.

Course Contents and Lecture Schedule

Module No.	Topics	No. of Hours	Course Outcome
1.	Durability of Concrete Structures		
1.1	Durability of concrete in sea water- action of sewage - influencing factors	1	CO1
1.2	Thermal properties of concrete - fire resistance - factors influencing	1	
1.3	Resistance to freezing and thawing- influencing factors	1	
1.4	Resistance to abrasion, erosion and cavitation - influencing factors	1	
2.	Distress in concrete structures- causes and effects		
2.1	Effects due to climate, temperature, chemicals - causes and effects	1	CO2
2.2	Design and construction errors -causes and effects	2	
2.3	Effects of distress in concrete structures- Cracks, delamination, Pop outs, Scaling.	2	
2.4	Effects due to disasters- Earthquake, flood, Tsunami, Cyclones.	2	

B.Tech. Degree (Civil Engineering)

3.0	Quality of Concrete Structures		
3.1	Condition Assessment		
3.1.1	Inspection, types of maintenance, structural appraisal, economic appraisal, Diagnosis of distress - Procedure	2	CO3
3.1.2	Methods of assessing the quality of concrete - Rapid visual Inspection survey, NDT and DT tests	2	
3.2	Quality assurance		
3.2.1	Need and Objectives- people benefited by QAS	1	CO4
3.2.2	Organization for QA, Components, Conceptual bases of quality assurance schemes	2	
3.2.3	Basic methods of development and operation of QAS	2	
4.	Materials for Repair		
4.1	Special cements for accelerated strength gain, expansive cement – properties, methods of manufacture and applications	2	CO5
4.2	Dry pack and Epoxy bonded Dry pack, Preplaced aggregate concrete, Epoxy bonded concrete.	2	
4.3	Shotcrete, Guniting, Silica fume concrete, Polymer concrete system,	2	
4.4	Self healing concrete, foam concrete, Fibre reinforced Polymers - properties, methods of manufacture and applications	2	
5.	Techniques of Repair/Rehabilitation		
5.1	Rust eliminators and polymer coating for rebars during repair, protective seal coat	2	CO6
5.2	Crack treatment- epoxy injection, mortar repair for cracks	1	
5.3	Plate bonding, RCC jacketing, propping and supporting.	2	
5.4	Fibre wrap technique, Foundation rehabilitation methods.	2	
5.5	Case studies on distress concrete structures and type of treatment done. Forensic investigations - case studies	1	
	Total Periods	36

22CEPJ0	ADVANCED REINFORCED CONCRETE DESIGN	Category	L	T	P	Credit
		PSE	3	0	0	3

Preamble

The extensive use of reinforced concrete for a variety of structural members has necessitated a proper understanding of the design in structural concrete members by the structural engineers. This course offers analysis and design of reinforced concrete structures like deep beams, corbels, curved beams, shear wall, bunkers and silos, virendeel girders, poles, pipes, formworks and concrete trusses as per IS specifications. It also aims at determination of safe as well as economical sections and their reinforcement under various types of loading. At the end of the course, student has a comprehensive design knowledge related to structures and systems that are likely to be encountered in professional practice.

Prerequisite

22CE620 Design of Reinforced Concrete Elements

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Design special elements such as deep beams, corbels and curved beams and detail the reinforcement	TPS3	B	70
CO2	Design special elements such as shear wall, bunkers and silos and detail the reinforcement	TPS3	B	70
CO3	Design special elements such as Virendeel girders and poles and detail the reinforcement	TPS3	B	70
CO4	Design reinforced concrete pipes under various types of loading and detail the reinforcement	TPS3	B	70
CO5	Design formworks for column, beam and floor slab and detail the reinforcement	TPS3	B	70
CO6	Analyse and design the concrete trusses and detail the reinforcement	TPS3	B	70

22CEPK0	COMPUTATIONAL METHODS IN STRUCTURAL ANALYSIS

Category	L	T	P	Credit
PSE	3	-	-	3

Preamble

It is common practice to use approximate solutions of differential equations as the basis for structural analysis. This is usually done using numerical approximation techniques. The most commonly used numerical approximation in structural analysis is the Finite Element Method. This course endeavours to fulfil two principal objectives. First, it acquaints matrix methods of structural analysis and their underlying concepts and principles. After a thorough presentation of mathematical tools and theory required for linear elastic analysis of structural systems, the course focuses flexibility and stiffness methods of analysis for computer usage. The direct stiffness method is the backbone of most computer programs is also discussed. Besides, the physical behavior of structures is analysed throughout with the help of axial thrust, shear force, bending moment and deflected shape diagrams.

Prerequisite

22CE320-Mechanics of Solids, 22CE420-Structural Analysis

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Compute the internal moment and by establishing BMD for beams and frames by flexibility method	TPS3	B	65
CO2	Solve for member forces of trusses and grids by flexibility method	TPS3	B	65
CO3	Calculate the internal moment and the resultant BMD of beams, frames using stiffness method	TPS3	B	65
CO4	Resolve the member forces of trusses and grids by stiffness method	TPS3	B	65
CO5	Solve for the internal forces and construct the BMD for Beams and plane frames by direct stiffness method	TPS3	B	65
CO6	Prepare the member forces report for the trusses and grids by direct stiffness method	TPS3	B	65

*** Weightage depends on Bloom's Level, number of contact hours,

22CEPL0	STRUCTURAL MASONRY

Preamble

This course covers the material and engineering aspects of brick units and mortars etc. This mainly focuses on the design of unreinforced and reinforced brick masonry structures as per the Indian Standard IS:1905. This also deals with two types of load such as uniformly distributed loads and concentrated loads. At last, the course discussed the general guidelines for Earthquake resistant brick masonry buildings.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency (Grade)	Expected Attainment level (%)
CO1	Comprehend the material and engineering properties of masonry units, mortar, grout and reinforcement and the relevant codes and standards	TPS2	B+	65
CO2	Design the brick masonry solid and cavity walls with or without pilasters under uniformly distributed or concentrated loads or concentrated load with an eccentric also the design columns/piers	TPS3	B+	65
CO3	Solve a brick masonry solid wall with an opening considering or not considering the pilaster under uniformly distributed or concentrated loads.	TPS3	B+	65
CO4	Study the strength of brick masonry shear walls and compound walls with or without pilasters under lateral loads	TPS3	B+	65
CO5	Design a reinforced brick masonry wall, lintels and slabs	TPS3	B+	60
CO6	Expound on the behaviour of masonry against seismic effect and also comprehend the best practices and Indian standard provisions on the construction aspects of brick masonry	TPS2	B+	60

22CEPM0	MUNICIPAL SOLID WASTE MANAGEMENT

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

Solid waste management has been one of the significant issues to be addressed by the urban local body which is responsible for providing basic service to the people. Due to the rapid urbanisation it is difficult to manage the huge quantity of waste generated from the community. So it is necessary and utmost priority to provide a viable solution to tackle the challenge. This course provides an in-depth understanding of solid waste characteristics and management. The students acquire proficiency in processing and safe disposal of municipal solid waste generated by a community.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the various functional elements involved in solid waste management system	TPS2	A	65
CO2	Classify, Quantify and characterise the solid wastes generated from a community.	TPS3	A	65
CO3	Analyze the collection system and collection route.	TPS3	A	65
CO4	Select suitable waste processing technologies and disposal methods	TPS3	A	65
CO5	Analyse the options to recover resources from waste generated	TPS3	A	65
CO6	Propose a safe disposal method for municipal solid waste.	TPS3	A	65

4. Paul T Williams, "Waste Treatment and Disposal", John Wiley and Sons, England, 2005.
5. Manual on municipal solid waste management, 2016.
6. NPTEL course on Integrated Solid Waste Management for smart cities.
7. NPTEL course on Plastic Waste Management.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1.Introduction			
1.1	Sources and types of municipal solid waste	1	CO1
1.2	Effects of improper Solid Waste Management	1	CO1
1.3	Elements of Solid Waste Management	2	CO1
1.4	Legal framework for Solid Waste Management in India	1	CO1

1.5	Government initiatives to tackle municipal solid waste	1	CO1
1.6	Strategic Planning-Decentralization and Micro planning	1	CO1
1.7	Principles of circularity & Integrated solid waste management	1	CO1
2.Quantification &Characterization			
2.1	Waste generation rates and factors affecting generation	1	CO2
2.2	Method of sampling and Composition	1	CO2
2.3	Characterization of waste	2	CO2
2.4	Handling and segregation of waste at source	1	CO2
3.Collection and Transfer			
3.1	Methods of collection of waste	1	CO3
3.2	Collection vehicles, manpower and collection routes & their optimization	1	CO3
3.3	Analysis of collection systems	1	CO3
3.4	Need for transfer and transport of MSW	1	CO3
3.5	Transfer station- Selection of location, operation and maintenance	1	CO3
4.Waste processing			
4.1	Objectives of MSW processing	1	CO4
4.2	Mechanical Processing	1	CO4
4.3	Thermal processing-Gasification and RDF	2	CO4
4.4	Biological conversion technologies	1	CO5
4.5	Principles of Energy conversion processes	1	CO5
5.Resource Recovery			
5.1	Resource recovery for sustainable development- Circular economy	1	CO5
5.2	Recycling technologies for paper,glass, metal and plastic	1	CO5
5.3	Bio chemical conversion -Commercial Anaerobic technologies	1	CO5
5.4	Biological processing for material recycling-compost and vermiculture	1	CO5
5.5	Resource recovery from solid waste- Case studies on Indian conditions and Best Practices	2	CO5
6.Disposal			
6.1	Open Dumping of solid waste on land -ill effects	1	CO6
6.2	Sanitary Landfills- site selection	1	CO6
6.3	Design and Operation- Landfill liner	1	CO6
6.4	Management of leachate and landfill gas, landfill closure	1	CO6
6.5	Legacy waste management	1	CO6
6.6	Landfill bioreactor & Dumpsite rehabilitation	1	CO6

22CEPN0	AIR AND NOISE POLLUTION MANAGEMENT

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

This course work offers the basic knowledge on various sources of air pollutants and their possible effects on local, regional and global environment. It provides various techniques for sampling and methods for analysing the pollutants. Also, it deals with the principles and design for control of particulate, gaseous air pollutants and its emerging trends to fulfil the legal aspects of air pollution. In addition, this course imparts knowledge about the fundamental theory of sound, noise pollution sources with its effects and control techniques.

Course Outcomes

On the successful completion of the course students will be able to

CO's	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected attainment level in %
CO1	Identify the sources and effects of air pollution with pollutants sampling techniques and measurements	TPS2	A	70
CO2	Show the significance of meteorological factors in dispersion of pollutants and forecast the pollutant concentration at some distance downwind.	TPS3	A	70
CO3	Apply suitable preventive and control measures for abatement of particulate pollutant.	TPS3	A	70
CO4	Apply suitable preventive and control measures for abatement of gaseous air.	TPS3	A	70
CO5	Identify suitable locations for citing of industries with appropriate air pollution management strategy.	TPS2	A	70
CO6	Identify the sources of noise and its effect on human beings, animals, plants and materials and produce appropriate noise control measures	TPS3	A	70

Syllabus

Introduction to Air pollution- Particulates and Gaseous pollutants - sources, classification and types of air pollutants, Effects and Impacts of Air pollution on environment; Sampling and Analysis techniques. **Meteorological factors** – Dispersion, factors affecting dispersion, Plume rise & behaviour and Modelling techniques; **Reduction and control methods** – source reduction and by equipment control; Automotive pollutions control; **Air pollution management** - Air quality standards, emission standards, indices, industrial plant locations, city planning, air pollution legislation and regulations – air pollution survey; **Noise pollution-** Properties & Characteristics of sound waves; Noise sources, effects; Hearing - mechanism, impairment, speech interference, sleep interference; Noise rating system; Standards for ambient and workspace noise levels, Noise control techniques at source, transmission path & at receiver end.

22CEPP0	WASTE MANAGEMENT

CATEGORY	L	T	P	CREDIT
PSE	3	0	0	3

Preamble

This course provides an in-depth knowledge of various types of waste, their characteristics, technology and management for the safe disposal of waste generated by a community. This course will also highlight the economic feasibility, legal framework and viability of environmentally sustainable technologies for waste management.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course students will be able to

CONumber	Course Outcome Statement	TCE Proficiency scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the past, present status and environmental challenges in waste management	TPS2	A	65
CO2	Apply appropriate processing technologies for different types of waste	TPS3	A	65
CO3	Explore suitable operational model and safe disposal practices for different types of waste	TPS3	A	65
CO4	Analyse financial aspects of waste management.	TPS3	A	65
CO5	Suggest appropriate waste management approach for the waste related issues.	TPS3	A	65
CO6	Adopt the best practices in waste management To analyse of case studies for understanding success and failures	TPS3	A	65

22CEPQ0	ENVIRONMENTAL IMPACT ASSESSMENT

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

Any developmental project will have impacts on the physical, social and biological environment. Some impacts are beneficial and some are adverse. EIA is important because it identifies the likely environmental, economical and social burden of the project at the initial phase of the project and informs the decision-makers about the significant impacts and risks associated with the project to promote sustainable development by ensuring the balance between environment and development.

Prerequisite

NIL.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the EIA process and categorize the EIA required for proposed projects	TPS2	A	70%
CO2	Apply the various methodologies involved in environmental Impact Assessment.	TPS3	A	70%
CO3	Predict and assess the impact of proposed projects on the Environment	TPS3	A	70%
CO4	assess the socio economic impacts on developmental projects	TPS3	A	70%
CO5	Propose proper mitigation measures to avoid environmental impact	TPS3	A	70%
CO6	Summarize the EIA report with suitable environmental management plan	TPS3	A	70%

22CEPR0	BASICS OF REMOTE SENSING

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

The objective of this course is to provide knowledge on remote sensing of objects on the earth surface using EMR waves with its object response spectral characteristics. This course also highlight the types of platforms like satellites used for remote sensing with image processing techniques and multi level data integration through GPS for real world applications.

Prerequisite

Fundamental of Physics, Mathematics, Geography, Geology and Surveying

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected attainment level in %
CO1	Understand the fundamentals of radiation & EMR and its characteristics.	TPS2	A	70
CO2	Understand various types of platforms and sensors used for remote sensing.	TPS2	A	70
CO3	Understand the process of image processing and interpretation techniques.	TPS2	A	70
CO4	Apply knowledge of satellites on various Civil Engineering applications	TPS3	A	70
CO5	Illustrate multi level data integration methods for mapping	TPS3	A	70
CO6	Apply knowledge of GPS for real time scenarios	TPS3	A	70

Syllabus

Introduction and Basic Concepts of Remote Sensing-Sources - EMR spectrum - Radiation Principles **Remote Sensing systems**- Scattering – Reflection – Absorption - Atmospheric windows and its significance – Interaction of energy with atmosphere – Interaction of energy with terrain. Spectral Reflectance - Spectral Signature curve. **Remote Sensing Data Scanning Systems**-Satellites platforms and orbits -Data Capture. Photographic Cameras - Digital Cameras -Scanners **Sensor Resolutions of Satellites**- IRS series - IKONOS, CARTOSAT - RESOURCESAT, Quickbird, OrbView, GeoEye, WorldView. **Global Positioning System**- Introduction- Concept - Segment - Positioning - Methods - Accuracy- GPS integration.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1.	Introduction and basic concepts of Remote Sensing		
1.1	Definitions and Energy sources	1	CO1
1.2	EMR spectrum -wavelength and frequency, regions and its properties	1	CO1
2.	Radiation laws - Plank's, Stefan, Kirchhoff's law and Boltzman law, radiant and kinetic temperature	1	CO1
2.1	Black body radiation	1	CO1
2.2	Remote Sensing systems		
2.3	Scattering - Rayleigh, Mie and Non-selective scattering	1	CO1
2.4	Reflection and absorption – types of reflecting surfaces and variations in absorption level by various objects and its controlling factors	1	CO1
2.5	Atmospheric windows and its significance	1	CO1
3.	Interaction of energy with atmosphere - Scattering, absorption, transmission, atmospheric windows	1	CO1
3.1	Interaction of energy with terrain - water, ice, vegetation, soils, minerals and rocks.	1	CO1
3.2	Spectral reflectance and concept of signature	1	CO3
	Spectral signature and curve	1	CO3
3.3	Data Processing	1	CO3
4.	Remote Sensing Data Scanning Systems		
4.1	Platforms - Ground, Airborne and Space borne	1	CO2

4.2	Orbital Characteristics - Coverage, Passes, Pointing Accuracy, Geostationary, sun synchronous, shuttle orbit. Semisynchronous orbit (Molniya orbit) and Quasi - zenith satellite orbit	1	CO2
4.3	Whiskbroom scanners, Pushbroom scanners, Side looking scanners, Multi and Hyperspectral scanners.	1	CO2
4.4	Types and Characteristics of Sensors - Imaging and non - imaging sensors, Active and passive sensors	1	CO2
5.	Sensor Resolutions of Satellites		
5.1	Spectral, Spatial, Radiometric & Temporal resolutions	2	CO2
5.2	IRS series - IRS - 1A and IRS - 1B sensors resolutions	1	CO2
	IRS series - IRS - 1C and IRS - 1D sensors resolutions	1	CO2
5.3	OCEANSAT - CARTOSAT - RESOURCESAT sensors resolutions	1	CO3
5.4	Sensors resolutions of IKONOS, Quickbird, OrbView, GeoEye, WorldView	1	CO3
5.5	Other important earth and space imaging satellite sensors resolutions	1	CO3
	Global Positioning System		
5.6	Introduction to GPS, Reference Systems and Coordinate systems: Geodetic coordinate systems, Datum transformations, Height systems, Time systems	2	CO6
5.7	Satellite Navigations constellations and Geopositioning	2	CO6
6.	Global Positioning Systems		
6.1	Basic Concepts - NAVSTAR, GLONASS, Indian Regional navigational Satellite System (IRNSS)	1	CO6
6.2	Control Segment, Space Segments, User Segment	2	CO6
6.3	GPS Positioning Types-Absolute Positioning, Differential positioning.	2	CO6
6.4	GPS Surveying Methods and Accuracy - Static & Rapid Static, Kinematic-Real Time Kinematic Survey -DGPS-GPS Data Processing and Accuracy	2	CO6
6.5	GPS integration- GPSLRF, GPSINS, GPS pseudolite, cellular integration.	2	CO5

22CEPS0	GROUND WATER MANAGEMENT

CATEGORY	L	T	P	CREDIT
PSE	3	0	0	3

Preamble

The objective of this course is to introduce the principles, methods and practices of well hydraulics and concept of ground water management. It also emphasise the need for protecting ground water resources from contamination and Planning of groundwater development under various conditions and constraints.

Prerequisite

Nil.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the origin and occurrence of ground water	TPS3	80	B
CO2	Plan and develop ground water resources	TPS3	80	B
CO3	Understand the properties and types of aquifers	TPS3	80	B
CO4	Estimate the yield from aquifers through pumping test	TPS3	80	B
CO5	Apply the artificial Recharge techniques	TPS3	80	B
CO6	Formulate Strategies to control the ground water pollution	TPS3	80	B

Syllabus

Ground water Occurrence: Origin of ground water, hydrologic cycle, rock properties effecting ground water, vertical distribution of ground water, zone of aeration and zone of saturation. **Planning of Ground water Development:** Water balance, assessment of recharge, utilizable recharge, Indian practices, constraints on ground water development, feasibility check, optimal ground water developments, planning of ground water development in canal command areas, planning of ground water development in coastal aquifers. **Aquifers:** Geologic formation, types, porosity, Specific yield and Specific retention. **Analysis of Pumping Test :** Steady ground water flow towards a well in confined and unconfined aquifers, Dupit's and Theim's equations, Cooper and Jacob Method. **Artificial Recharge of Ground Water:** Concept of artificial recharge, Recharge methods, Relative merits, Application of GIS and Remote sensing in Artificial Recharge of Ground Water. **Control of Ground Water Pollution Hazards:** Evaluation of pollution hazard and water supply pollution hazards. Strategies for control of ground water pollution. Mounting Ground Water Quality Protection Programs.

Learning Resources

1. Ground water Hydrology by David Keith Todd, John Wiley & son, New York, Third revised edition (2005)
2. Groundwater by H.M. Raghunath, Wiley Eastern Ltd. (1 December 2007)
3. Groundwater system planning & management- R. Willies & W.W.G. Yeh, Printice Hall (1987).
4. Apply Hydrogeology by C.W. Fetta, CBS Publishers & Distributors (2019).

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1.0	Ground water Occurrence		
1.1	Origin of ground water	1	CO1
1.2	Hydrologic cycle	1	CO1
1.3	Rock properties effecting ground water	1	CO1
1.4	Vertical distribution of ground water, zone of aeration and zone of saturation	1	CO1
2.0	Planning of Ground water Development		
2.1	Water balance	1	CO 2
2.2	assessment of recharge	1	CO 2
2.3	utilizable recharge	1	CO 2
2.4	Indian practices, constraints on ground water development	1	CO 2

22CEPT0	ENGINEERING HYDROLOGY

Category	L	T	P	Credit
PSE	2	1	0	3

Preamble

It is the science that deals with the waters of the earth, their occurrence, circulation, distribution, and their reaction with environment including their relation to living things.

Prerequisite

Fundamentals of Engineering Mathematics and Basic Science.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Demonstrate the importance of hydrological cycle and make the measurement of rainfall data.	TPS3	A	70
CO2	Compute the losses viz evaporation, evapotranspiration and infiltration for a catchment area.	TPS3	A	70
CO3	Calculate the quantity of runoff generated from a catchment.	TPS3	A	70
CO4	Illustrate the hydrographs to measure the stream flow.	TPS3	A	70
CO5	Compute flood flows and use suitable control measures.	TPS3	A	70
CO6	Suggest methods of conserving surface and groundwater.	TPS2	A	70

22CEPU0	GROUND IMPROVEMENT TECHNIQUES

Category	L	T	P	Credit
PC	3	0	0	3

Preamble

This course deals with the different methods adopted for improving the properties of remoulded and in-situ soils by techniques such as in- situ densification, consolidation and dewatering. This course enables the graduates to understand how reinforced earth walls can obviate the problems associated with conventional retaining walls. Also, the graduates are exposed to the concepts of grouting, soil stabilization and the use of geotextiles to improve the engineering performance of soils.

Prerequisite

Soil Mechanics and Foundation Engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the role of ground improvement and select appropriate ground improvement technique for the given subsoil condition.	TPS2	A	65
CO2	Suggest appropriate dewatering technique for lowering the ground water table	TPS3	A	65
CO3	Recommend suitable techniques for densifying cohesionless soil deposits	TPS3	A	65
CO4	Suggest appropriate techniques for improving cohesive soil deposits	TPS3	A	65
CO5	Perform simple design of reinforced earth walls and illustrate the role of geo-textile in ground improvement	TPS3	A	65
CO6	Explain the concept of grouting and soil stabilization for improving the engineering performance of soils.	TPS2	A	65

22CEPV0	TRAFFIC ENGINEERING ANDSAFETY

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

Students will acquire comprehensive knowledge of traffic surveys and studies such as volume count, Speed and delay, origin and destination, parking, pedestrian and accident surveys. They will achieve knowledge on design of intersections. Students will become familiar with various traffic control and traffic management measures.

Prerequisite

Fundamentals of Highway Engineering

Course Outcomes

On the successful completion of the course students will be able to

CO	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain road user and vehicular characteristics	TPS3	B	65
CO2	Apply the knowledge of traffic surveys in traffic management	TPS3	B	65
CO3	Design geometrics of intersections	TPS3	B	65
CO4	Apply the methods of traffic control aids in road network	TPS3	B	65
CO5	Explain the rules and regulations of road safety	TPS2	B	65
CO6	Adapt a suitable road safety management technique for congested traffic pattern	TPS3	B	65

*** Weightage depends on Bloom's Level, number of contact hours,

Syllabus

Introduction. Significance and scope, Characteristics of Driver, the pedestrian, the vehicle and road, skid resistance and braking efficiency. Components of traffic engineering – road, traffic and land use characteristics. **Traffic Surveys and Analysis** -volume, capacity speed and delay studies, origin and destination, parking studies, pedestrian and Accident studies. **Geometric Design of intersection-** conflict points at intersections, principles and elements of intersection design, rotary design, Interchanges-Warrant for interchanges, design principles of interchange- level of service. **Traffic Control-** Traffic signs, road markings, design of traffic signal and signal coordination. Traffic Control aids - street furnitures, street lighting **Road safety-** Definition, Objectives, Road safety demographics, Traffic regulations – basic principles, National Road Safety Policy, Motor Vehicle Act-1988, Intersection safety, driving in night times, long journey, road safety at road works. **Traffic management systems** - methods and techniques for traffic management-role of ITS in traffic management

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	Course Outcome
1.0	Introduction		
1.1	Significance and scope, Characteristics of Driver,	1	CO1
1.2	Pedestrian, the vehicle and road	1	
1.3	Skid resistance and braking efficiency	1	
2.0	Traffic Surveys and Analysis		
2.1	Surveys for Traffic Engineering, Speed studies	2	CO2
2.2	Volume and capacity Studies	1	
2.3	Travel time and Delay Studies	1	
2.4	Parking and pedestrian Studies	1	
2.5	Accident Studies (concepts and problems)	2	
3.0	Geometric Design of intersection		
3.1	Conflict points at intersections	1	CO3
3.2	Principles and elements of intersection design	1	
3.3	Classification of intersection - concepts of flow in at grade and grade separated intersections	1	
3.4	Rotary design	2	
3.5	Warrant for interchanges, design principles of interchange – capacity analysis level of service (concepts)	2	
4.0	Traffic Control		
4.1	Traffic signs, road markings - significance, classification and purpose	2	CO4
4.2	Design of traffic signal and signal coordination.	2	
4.3	Traffic control aids - Types of street furnitures	1	
4.4	Street lighting - Purpose, importance	2	
5.0	Road safety		
5.1	Definition, Objectives, Road safety demographics	1	CO5
5.2	Traffic regulations - basic principles, National Road Safety Policy, Motor Vehicle Act - 1988	1	
5.3	Intersection safety, driving in night times, long journey,	2	

	road safety at road works		
6.0	Transportation System Management		
6.1	Methods of Travel demand & traffic management	3	CO6
6.2	Role of ITS in traffic management	2

22CEPW0	AIRWAYSANDWATERWAYS

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

The student develops skills on airport planning and design with the prime focus on runway and taxiway geometrics. Students become conversant with the definition, purpose, location and materials of coastal structures such as piers, breakwaters, wharves, jetties, quays and fenders. The students acquire knowledge on site reconnaissance for location and planning of harbours.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course students will be able to

CO	Course Outcome Statement	TCE Proficiency Scale	Attainment level	Proficiency level
CO1	Understand the basics of airport planning and its importance in national development	TPS2	A	70
CO2	Design various components of airports	TPS3	A	70
CO3	Geometric Design and Corrections for Gradients	TPS2	A	70
CO4	Air-traffic control aids on airport	TPS2	A	70
CO5	Gain knowledge on harbour and docks and its functions	TPS2	A	70
CO6	Select the suitable types of navigational aids	TPS2	A	70

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	Course Outcome
1.0	Airport planning		
1.1	Role of Air Transport, Components of Airports	1	CO1
1.2	Airport Planning - Air traffic potential, Site Selection	2	
2.0	Design of Airport components		
2.1	Runway Design- Orientation, Cross wind Component, Wind rose Diagram	3	CO2
3.0	Geometric Design and Corrections for Gradients		
3.1	Taxiway Design - Geometric Design Elements, Minimum Separation Distances, Design Speed	2	CO3
3.2	Airport Drainage - Airport Zoning - Clear Zone, Approach Zone, Buffer Zone, Turning Zone, Clearance over Highways and Railways	2	
3.3	Airport Layouts - Apron, Terminal Building, Hangars, Motor Vehicle Parking Area and Circulation Pattern,	1	
3.4	Airport Buildings – Primary functions, Planning Concept, Principles of Passenger Flow, Passenger Facilities	1	
3.5	Taxiway Design - Geometric Design Elements, Minimum Separation Distances, Design Speed	2	
4.0	Visual aids and Air Traffic Control		
4.1	Visual Aids - Runway and Taxiway marking, Wind Direction Indicators, Runway and Taxiway Lightings.	2	CO4
4.2	Air Traffic Control - Basic Action, Air Traffic Control Network- Control within terminal area, Control over airways, Airway Communication	2	

4.3	Air Traffic control Aids - Enroute aids and landing aids, Helipads, Hangars, Service Equipments	2	
5.0	Harbour and Docks		
5.1	Definition of Terms - Harbours, Ports, Docks, Tides and Waves, Littoral Drift, Sounding, Area, Depth	2	CO5
5.2	Satellite Ports - Requirements and Classification of Harbours – Site Selection	2	
5.3	Selection Investigation – Speed of water, Range of Tides, Waves and Tidal Currents, Littoral Transport with Erosion and Deposition	2	
5.4	Shore Considerations- Proximity to Towns/Cities, Utilities, Coastal Structures - Breakwaters, Wharves	2	
5.5	Dry and Wet Docks, Planning and Layouts - Entrance	3	
6.0	Navigational aids and Dredging		
6.1	Necessity and types of signals including floating signals - buoys and beacons- mooring and mooring accessories	3	CO6
6.2	Types of dredging and its applications.	2	
	Total Hours	36 Hrs

22CEPX0	GEOTECHNIQUES FOR INFRASTRUCTURE

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

Major Infrastructures like bridges, tunnels, Transmission line Towers etc require the use of special Foundations. Often foundations for these works are constructed in poor soils which require remediation work like the use of geo textiles. This course deals with the methods of construction of raft foundation, piles, caissons, diaphragm walls, Foundation for Transmission Towers, Chimneys etc. Also, techniques for the construction of Foundations in Expansive soils, Compressible soils and Drainage and Dewatering methods for the construction of Foundations are addressed.

Prerequisite

Soil Mechanics and Foundation Engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Suggest appropriate construction methods for Rafts and Diaphragm walls.	TPS3	A	65
CO2	Suggest suitable construction methods for Foundation for Transmission line Towers and Pile Foundations.	TPS3	A	65
CO3	Recommend the safety measures to be adopted during piling, sinking of Caissons and explain the concept of reinforced earth walls	TPS3	A	65
CO4	Suggest suitable Foundation Techniques for Expansive soils and Compressible soils.	TPS3	A	65
CO5	Justify the application of geotextiles in construction works	TPS3	A	65
CO6	Suggest suitable construction methods for drilled pier and explain the concept of piled raft.	TPS3	A	65

Syllabus

CONSTRUCTION OF SHALLOW FOUNDATIONS: Excavations for Foundations in soft soils – Recommendations – Types of Raft - Construction of Raft Foundations – Foundations for Transmission line towers and poles - Construction of Diaphragm walls -.

CONSTRUCTION OF DEEP FOUNDATIONS: Selection of appropriate type of Pile - Piling rig - Pile driving hammers - Construction aspects of bored and driven Piles - Micro Piles – Pile groups – Berthing structures and Jetties – Codal provisions.

CONSTRUCTION SAFETY: Safety measures during piling – sinking of Caissons -

EARTH REINFORCEMENT: Earth reinforcement - Principles and basic mechanism of reinforced earth-Construction of reinforced earth retaining walls. **FOUNDATIONS ON WEAK SOILS:** Soil improvement and Foundation Techniques for compressible and expansive soils. **GEOTEXTILES:** Synthetic and natural fiber - based Geotextiles and their applications - Filtration, drainage, separation, erosion control. **DRILLED PIER AND PILED RAFT:** Types of drilled shafts - construction procedure-load bearing capacity in sand and clay-Types of piled raft - Design of piled raft for settlement reduction and load transmission.

22CERA0	ASEISMIC DESIGN OF STRUCTURES

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

This course offers design of structures subjected seismic forces. This also includes Design concepts of seismic Hard analysis

Prerequisite

Static and Dynamics

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Apply the SHA to evaluate seismic hazard parameters	TPS3	B	65
CO2	Apply theory of vibration to the built structures for Random vibration	TPS3	B	65
CO3	Evaluate Liquefaction potential and suggest the methods to overcome liquefaction	TPS3	B	65
CO4	Apply the Indian codal provisions to analyse the RC structures and masonry buildings	TPS3	B	65
CO5	Apply the Indian codal provisions to design a shear wall	TPS3	B	65
CO6	Apply the vibrating principles to Design the foundation for EQ forces	TPS3	B	65

22CERB0	EXPERIMENTAL TECHNIQUE AND INSTRUMENTATIONS

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

This course offers various experimental techniques and measurements needed for analyse and design of structures. The course covers the basic aspects of experimental stress analysis that includes exhaustive treatment of the most versatile techniques like photo elasticity and strain gauges.

Prerequisite

Engineering Physics, Strength of materials

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	understand the various strain gauges and the principle of operation	TPS2	B	65
CO2	apply the principle to operation of the strain gauges into various practical problems	TPS3	B	65
CO3	apply the photo elasticity theory to stress analysis.	TPS3	B	65
CO4	apply geotechnical instrumentation	TPS3	B	65
CO5	understand various NDT technique and its principle of operation	TPS2	B	65
CO6	apply the various instrumentation involved in the measurement of structural parameters	TPS3	B	65

22CERC0	COMPUTER AIDED DESIGN

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

The syllabus of subject "Computer Aided Design" of structures includes the main concepts of informatics, computer hardware and software, principles for design and types of operational systems (Windows), work with interpreter, compilers and linkage editors. The main aspects of programming with MS Visual C++ considered are: variables and types of data, arithmetical, logical and relational operations, main operators, functions, objects, classes, input-output operators, etc. This course provides the essentials of performing computer-aided design, from engineering rather than a purely mathematical point of view.

Prerequisite

Design of Reinforced Concrete Elements (22CE610), and Design of Steel Elements

Course Outcomes

On the successful completion of the course students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Formulate algorithm for solving equations and construct algorithm for truss problems using matrix method	TPS3	B	70
CO2	Construct algorithm for design of reinforced concrete members	TPS3	B	70
CO3	Construct algorithm for design of steel members	TPS3	B	70
CO4	Construct algorithm for analysis of prestressed concrete members	TPS3	B	70
CO5	Formulate spread sheet for design of structural elements and quantity estimation	TPS3	B	70
CO6	Develop stages of computer aided analysis and design including optimisation	TPS3	B	70

22CERD0	ANTI-TERRORISM DESIGN ONSTRUCTURES

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

Disaster mitigation and its preparedness is the need of current scenarios. Blast induced loads on structures are results of accidents in the industries and also from evil minds. These disasters, if happened, may result devastating effect on infrastructure including operational facilities, buildings, bridges etc. This will not only cause monetary loss but importantly the loss of lives. The course is proposed with an aim of educating students for mitigation of blast effects on structures.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the fundamentals of blast engineering and related blast dynamics.	TPS2	B	70
CO2	Understand the theoretical and practical aspects of the recent advancements made in blast resistant and anti-terrorism design of structures in existing facilities.	TPS2	B	70
CO3	Review the high strain rate behavior of material.	TPS3	B	70
CO4	Illustrate the characteristics of underground blast and its influence on geological factors.	TPS3	B	70
CO5	Plan and Design blast resistant strategies in structural and non-structural components using empirical approach and available commercial packages of finite element.	TPS3	B	70
CO6	Apply the Indian/international guidelines in design of blast resistant structure for intended level of threat scenario from chosen material.	TPS3	B	70

22CERE0	DESIGN OF REINFORCED CONCRETE STRUCTURES

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

Design of reinforced concrete structures started in the beginning of last century following purely empirical approach. Thereafter came the so-called rigorous elastic theory where the levels of stresses in concrete and steel are limited so that stress-deformations are taken to be linear. However, the limit state method, though semi-empirical approach, has been found to be the best for the design of reinforced concrete structures. This course offers analysis and design of reinforced concrete structures. The course will focus on explaining the background of current design specifications for reinforced concrete structures. It aims at determination of safe as well as economical sections and their reinforcement under various types of load combinations. At the end of the course, student has a comprehensive design knowledge related to structures and systems that are likely to be encountered in professional practice.

Prerequisite

22CE620 Design of Reinforced Concrete Elements

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Analyse and design the slabs based on Yield line theory and other flat and grid floor slab systems and detail the reinforcement	TPS3	B	70
CO2	Analyse and design the building frames by approximate methods and detail the reinforcement	TPS3	B	70
CO3	Design the foundation and detail the reinforcement	TPS3	B	70
CO4	Design the staircases and detail the reinforcement	TPS3	B	70
CO5	Design the retaining walls and detail the reinforcement	TPS3	B	70
CO6	Design the water tanks and detail the reinforcement	TPS3	B	70

22CERF0	DESIGN OF STEEL STRUCTURES

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

This course offers the design of steel structures as per the limit state method. This course follows the recommendation of IS: 800 – 2007. It aims at determination of safe as well as economical steel components such as plate girders, gantry girders, and beam-columns. This course also expose the student to IS: 875 provisions for various load calculations. The design of roof truss using rolled and tubesection using IS: 800-2007 is covered in this course. Framed connections such as beam to beam, beam to column connection are also dealt in this course.

Prerequisite

22CE320-Mechanics of Solids, 22CE520-Design of Steel Elements

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Design a Plate girder for its moment & shear and check the adequacy of the end panel using the IS800-2007 Provisions.	TPS3	A	70
CO2	Design of Longitudinal and transverse Stiffeners for the Plate girder.	TPS3	A	65
CO3	Analyze and design a gantry girder for its maximum load effects and fatigue effects.	TPS3	A	70
CO4	Evaluate the capacity of the column subjected to combined axial compression and bending moment.	TPS3	A	65
CO5	Calculate all the possible loads on the roof truss and its load combinations	TPS3	A	70
CO6	Design the purlins & roof truss members using rolled steel sections.	TPS3	A	65

Syllabus

Plate girder- Introduction to Plate girder, Difference between beam and plate girder, Design of welded plate girder, Proportioning of web and flange plates, Design of mid- section, Curtailment of flange plates, shear behaviour of transversely unstiffened and stiffened web, web subjected to co-existent bending and shear, transverse web stiffener, Bearing stiffener, end bearing stiffener and load bearing stiffener, Longitudinal web stiffener, Flange plate to a web connection, Splices - Flange and web. **Gantry girder**: Introduction, load considerations, max load effects, Fatigue effects, Determination of maximum bending moment and shear force due to vertical component of crane wheel load, the horizontal component of crane wheel load, longitudinal effect of wheel load, Design of gantry girder, Connection in gantry girder. **Beam-Column**: Introduction, behaviour of beam-column, second order moment in beam-column, Elastic torsional buckling of beam columns, Nominal strength in beam column in uniaxial bending, Biaxial bending. **Industrial structures**: Pitched roof truss configuration such as Fink & Fink fan, Howe, Pratt, etc. Introduction to loads on truss using IS875 – Part-1 ,2 ,3, Possible Load combinations, Estimation of design dead load, live load, wind load on Roof and walls. Review of analysis of truss. **Design of Truss using Rolled steel sections**: Purlin design using rolled sections, design of truss member against tension and compression, design of Support. -

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	Course Outcome
1.0	Plate girder		
1.1	Introduction to Plate girder – Difference between beam and plate girder & IS 800-2007.	1	CO1 & CO2
1.2	Design of welded plate girder		
1.2.1	Proportioning of web and flange plates - Design of mid-section	2	
1.3	Curtailment of flange plates	1	
1.4	shear behaviour of transversely unstiffened and stiffened web	2	
1.4.1	web subjected to co-existent bending and shear	2	
1.4.2	transverse web stiffener - Bearing stiffener	2	
1.4.3	End-bearing stiffener and load-bearing stiffener	1	

1.5	Longitudinal web stiffener	1	
1.5.1	Flange plate to web connection	1	
1.5.2	Splices - Flange and web	1	
2.0	Gantry girder		CO3
2.1	Introduction and load considerations	1	
2.2	Maximum load effects and Fatigue effects		
2.3	Determination of maximum bending moment and shear force due to vertical component of crane wheel load	1	
2.4	Determination of maximum bending moment and shear force due to horizontal component of crane wheel load and longitudinal effect of wheel load	1	
2.5	Design of gantry girder	1	
2.6	Connection in gantry girder	1	
3.0	Beam-Column		CO4
3.1	Introduction to the behavior of Beam-column and IS 800:2007	1	
3.2	Second-order moment in beam-column	2	
3.3	Elastic torsional buckling of beam-columns		
3.4	Nominal strength in beam-column in uniaxial bending	1	
3.5	Nominal strength in beam-column in biaxial bending	2	
4.0	Industrial structures:		CO5
4.1	Pitched roof truss configuration, Fink & Fink fan truss.	1	
4.2	Introduction to loads on truss using IS875 – Part-1 ,2 ,3, Possible Load combinations,	2	
4.3	Estimation of design dead load, live load, and wind load on Roof and walls. Review of analysis of truss.	2	
5.0	Design of Truss using Rolled steel sections		CO6
5.1	Purlin design using angle and channel sections,	2	
5.2	Design of members of Truss using Rolled steel sections	2	
5.3	Design of supports	2

22CERG0	DESIGN OF STEEL CONCRETE COMPOSITE STRUCTURES

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

This course deals with the Limit State Method of Design of Steel-Concrete Composite Structures. The discussion on the concept of Limit State Design based on the new IS: 11384 2022, has been included in this course. The design and detailing of a composite beam, column, slab etc. were dealt with in detail.

Prerequisite

22CE520-Design of Steel Elements, 22CE620 Design of Reinforced Concrete elements

Course Outcomes

On the successful completion of the course, students will be able to

CO	Course Outcomes	TCE Proficiency Scale	Expected Proficiency (Grade)	Expected Attainment level (%)
CO1	Understand the mechanism of composite action between steel and concrete and explain the types and behaviour of shear connectors.	TPS2	B	65
CO2	Construct the stress blocks of a composite beam at ultimate with or without profiled decking steel sheet for various neutral axis positions. Also, estimate the sectional properties of composite beams	TPS2	B	65
CO3	Design a composite beam with or without a profile decking steel sheet either simply supported or continuous end conditions using IS:11384-2022	TPS3	B	60
CO4	Design a composite slab with the provision of a profile decking steel sheet using IS:11384-2022	TPS3	B	65
CO5	Design Encased as well as In-filled composite columns using IS:11384-2022	TPS3	B	65
CO6	Design a Beam-column under uni-axial bending and bi-axial bending	TPS3	B	60

Syllabus

Introduction to Steel-Concrete Composite Structures - Theory of Composite Structures – Modular ratio – Transformed section – Composite action – No interaction – Full interaction – Slip calculation – Types and load transferring mechanism of Shear connectors – Sectional property like moment of inertia – **IS:11384-2022 Code provisions for steel concrete composites design** – Limit states for Strength and Limit States for Serviceability – Local buckling and section classification – Partial Safety Factors for loads and materials– Load combinations – Stress block – Ultimate moment capacity with or without profiled decking steel sheet.

Composite Beams – Introduction to Composite beams – Ultimate moment behaviour – Types, merits and behaviour of profiled decking – Design consideration for simply supported and continuous composite beam with or without profiled steel sheeting – Problems – **Composite floors** – Introduction of composite floors – shear transferring mechanism in profile deck system – Bending resistance of composite slab – Design consideration of composite floor

– Design of Composite floor– **Composite columns** – Introduction to composite columns and its applications – Resistance of encased composite column cross section and infilled composite column cross section under compression – Design consideration of both encased and infilled composite column under – axial compression, **Composite Beam-Column** – Interaction M-N Curve – Estimation of plastic moment capacity of beam-column – plastic capacity of encased and infilled composite column under uniaxial bending and biaxial bending – Problems.

22CERH0	COLD FORMED STEEL STRUCTURAL DESIGN

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

Cold-formed steel has been widely used in building construction, from residential houses to industrial buildings. This course discusses the manufacturing process of cold-formed steel, the fundamental theories of cold-formed steel design, the advantages of cold-formed steel over other construction materials, cold-formed steel applications in today's construction market, and the connection methods.

Prerequisite

22CE520-Design of Steel Elements

Course Outcomes

On the successful completion of the course, students will be able to

COS	Course Outcomes	TCE Proficiency Scale	Expected Proficiency (GRADE)	Expected Attainment level (%)
CO1	Understand the manufacturing process of cold-formed steel, the effect of cold work and other material properties	TPS2	B+	65
CO2	Demonstrate the local buckling, Post buckling of plate element under compression and behaviour of compression elements	TPS2	B+	65
CO3	Find out the adequacy of Cold-Formed steel flexural members that may be stiffened or unstiffened but with lateral support as per the provision of IS:801. Also, Check the adequacy of the CFS beam webs under web crippling as per IS:801.	TPS3	B+	65
CO4	Ascertain the adequacy of lateral buckling of CFS I beams and channels as per IS:801	TPS3	B+	60
CO5	Design the CFS member under axial compression	TPS3	B+	65
CO6	Find out the adequacy of CFS members subjected to bending and axial compression	TPS3	B+	60

22CERJ0	RESOURCE AND ENERGY RECOVERY FROM WASTES

CATEGORY	L	T	P	CREDIT
PEES	3	0	0	3

Preamble

This course work is focused on recovery of resources and energy from solid waste which includes sludge generated from wastewater. The process of material recovery and energy recovery in the form of Thermal, Biofuels and green manure product from the solid waste is covered in detail. The course work also covers several case studies to recycle the usable materials recovered from solid waste with its socio-economic and legal considerations.

Prerequisite

NIL.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the various recovery processes and volume reduction processes on generated waste.	TPS2	A	65
CO2	Assess the biological process for transformation of solid waste to useful by-products	TPS3	A	65
CO3	Assess the Bio-chemical process for transformation of solid waste to useful by-products	TPS3	A	65
CO4	Assess the Thermo-chemical process for transformation of solid waste to useful by-products	TPS3	A	65
CO5	Analyse the recycling and recovery concepts of various solid wastes and E-waste	TPS3	A	65
CO6	Select appropriate technology to recover resources and energy from the waste generated by the community	TPS3	A	65

22CERK0	INDUSTRIAL WASTE WATER MANAGEMENT

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

As a fast growing country, India is flooded with very good numbers of small, medium and large sized industries. The liquid effluent generated from such industries would pose a great danger to the environment, if they are not managed properly. Hence, industrial wastewater management will be of great importance in maintaining the quality of the environment for sustainable living. This course work deals with characterization of industrial effluents, its impact on the environment, possible preventive measures against generation of wastes and treatment and reuse option for the generated wastewater.

Prerequisite

Knowledge on characterization of wastewater, physico-chemical treatment and biological treatment.

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Fix the characteristics of the wastewater generated from any industry and identify factors influencing their generation	TPS2	A	65
CO2	Identify the means and methods to reduce the quantity of generation of wastewater by implementing Pollution Prevention programme	TPS3	A	65
CO3	Develop appropriate treatment systems for the wastewater generated from the industries	TPS3	A	65
CO4	Identify the possible recycling and reuse opportunities for the generated wastewater and residuals by employing suitable treatment units	TPS3	A	65
CO5	Investigate the feasibility and benefits of individual, common and joint treatment of industrial wastewater	TPS3	A	65
CO6	Suggest suitable treatment schemes for wastewater generated from specific industries based on their characteristics	TPS3	A	65

Syllabus

Introduction to industrial wastewater: Industrial scenario in India – industrial activity and environment, uses of water by industry, sources and types of industrial wastewater. Regulatory requirements for treatment of industrial waste water, industrial waste survey, industrial waste water generation rates, characterization and variables, population equivalent. **Industrial Pollution Prevention:** Prevention Vs Control of industrial pollution – benefits and barriers. Source reduction techniques – waste audit, evaluation of pollution prevention options, environmental statement as a tool for pollution prevention, waste minimization circles. **Industrial Wastewater Treatment:** Equalization, Neutralization, oil separation, flotation, precipitation, Aerobic and anaerobic biological treatment – sequencing batch reactors, high rate reactors(Recall).Advanced Chemical oxidation – Electro chemical oxidation, wet air oxidation, ozonation, photocatalysis. Other Treatment Processes- Heavy metal removal, Refractory organics separation by adsorption- ion exchange, membrane technologies, nutrient removal. **Wastewater Reuse and Residual management:** Evaporation- Evaporators types and classification. Zero effluent discharge systems - Quality requirements for wastewater reuse, industrial reuse, disposal on water and land. Residuals from industrial wastewater treatment units- quantification and characteristics of sludge - thickening, digestion, conditioning, dewatering and disposal of sludge. Management of RO rejects. Individual and common effluent treatment plants – combined treatment of industrial waste water and domestic/municipal wastewater. **Case Studies:** Industrial manufacturing process description, waste water characteristics, source reduction options and waste treatment flow sheet for textiles, tanneries, pulp and paper, metal finishing, sugar and distilleries.

22CERL0	SUSTAINABLE MANAGEMENT OF URBAN ECOLOGY

CATEGORY	L	T	P	CREDIT
PEES	3	0	0	3

Preamble

This course provides an overview of various theoretical perspectives, debates and research practices in urban ecology, urban ecosystems, and urban sustainability. This course work covers the concept of sustainable management especially in the urban environment. The future of urban ecosystems and managing the climate change through the concept of future proofing is also addressed.

Prerequisite

Ecology & Environmental Science and Wastewater Engineering

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the concept of sustainable development in urban perspective.	TPS2	A	65
CO2	Describe the concept of urban ecology and its framework	TPS2	A	65
CO3	Link the relationships between Smart cities and urban ecology	TPS3	A	65
CO4	Identify the issues and challenges of Sustainable Water Management In Urban Areas	TPS3	A	65
CO5	Connect sustainability concepts and technology to real-world urban challenges in wastewater management	TPS3	A	65
CO6	Develop the future urban ecosystems keeping the climate change as a constraint.	TPS3	A	65

22CERM0	ENVIRONMENTAL POLICIES AND LEGISLATIONS

CATEGORY	L	T	P	CREDIT
PEES	3	0	0	3

Preamble

This course work provides an in-depth understanding of the vast field of Environmental law and policy and the study would be familiar with the overall legal regime of the country as well as international obligations. To impart knowledge on the policies, legislations, institutional framework and enforcement mechanism for environmental management in India.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency scale	Expected Proficiency	Expected Attainment level (%)
CO1	Explain the Indian Legal System and the fundamentals of Indian Constitution.	TPS2	A	70
CO2	Discuss the legal regime established under the Constitution in India on environment and its protection.	TPS3	A	70
CO3	Apply the provision for legal control of industrial pollution by legislations	TPS3	A	70
CO4	Critically analyze environmental laws within various contexts and to evaluate laws against procedural and substantive criteria.	TPS3	A	70
CO5	Discuss the origin, evolution and expansion of international environmental law.	TPS3	A	70
CO6	Illustrate the Concepts evolved through judicial decisions with suitable case laws in Indian Courts.	TPS3	A	70

Course Contents and Lecture Schedule

Module No.	TOPIC	No. of Lectures	COURSE OUTCOME
1.0 Fundamentals of Law and Legal system			
1.1	Introduction to law- Indian legal system	1	CO1
1.2	Fundamentals of Indian constitution	1	CO1
1.3	Statutes, Rules and Notification	1	CO1
1.4	Fundamental rights- Writ petitions	1	CO1
1.5	Public Interest Litigations-RTI Act	1	CO1
1.6	Significance of Environmental Law and International Environmental Law.	1	CO1
2.0 Indian Constitution and Environmental Protection			
2.1	Indian Constitution and Environmental Protection	1	CO2
2.2	Constitutional provisions concerning Environment Article 14, 15, (2)(b) 19(e), 21, 31, 32, 38, 39, 42, 47, 48-A, 49, 51, 51-A	1	CO2
2.3	Common Law & Criminal Law -Nuisance &	1	CO2
2.4	Concepts of Liabilities -Strict liability and Absolute liability,	1	CO2
2.5	Right To Environment – A Basic Human Right: A Constitutional Law Perspective	1	CO2
2.6	National Environmental Policy 2006	1	CO2
3.0 Remedies for Environmental Pollution			
3.1	Provisions of IPC relating to environmental problems (public nuisance u/s 268 and others (Sections 269, 270, 277, 284, 285, 286, 425 to 440)	1	CO3
3.2	Common Law Remedies/Remedies under Law of Tort-Section 133 of Cr.P.C	1	CO3
3.3	Penal Remedies-Indian Penal Code and Code of Criminal Procedure	1	CO3
3.4	Remedies under Constitutional Law - Writs	1	CO3
3.5	Public Liability Insurance Act, 1991	1	CO3
3.6	The National Green Tribunal Act 2010	1	CO3
4.0 Major Indian legislations			
4.1	Water Act (1974)- Power & Functions of Regulatory	1	CO4
4.2	Air Act (1981)- Power & Functions- Noise Pollution	1	CO4
4.3	Environmental Protection Act (1986) Genesis of the act-Delegation of Powers	1	CO4
4.4	Waste Management Laws	1	CO4
4.5	Environment Impact Assessment and Coastal Regulation Zone Notifications	1	CO4
4.6	Natural Resources protection legislations	1	CO4
5.0 Environmental legislations international scenario			
5.1	Development of International Environmental Law- General Issues of the international law related to environmental protection	1	CO5
5.2	Stockholm Declaration-Rio Declaration on Environment and Development-	1	CO5

5.3	Montreal Protocol on Substances that deplete Ozone Layer	1	CO5
5.4	Basel Convention on the Control of Transboundary Movement of Hazardous Wastes and their disposal	1	CO5
5.5	Convention of Biological Diversity	1	CO5
5.6	U.N Frame Work Convention on Climate Change- Kyoto Protocol	1	CO5
6.0 Environment and Development case laws			
6.1	Meaning and concept of development - Its impact on environment; conflict between environment development	1	CO6
6.2	Concept of Sustainable Development., Polluter Pay Principle, Precautionary Principle, Public Trust Doctrine	1	CO6
6.3	Landmark Judgments- Olum gas leakage case, Rural Litigation and Entitlement Kendra, Dehradun,(1985)	1	CO6
6.4	Vellore Citizen Welfare Forum v. Union of India,(1996)5SCC647)	1	CO6
6.5	S. Jagannath v. UOI (1997) SCC867 Ganga Pollution case(1988)	1	CO6
6.6	Vellore Citizens welfare forum case M.C.Mehta Vs. Kamalnath (1997) I SCC388	1	CO6

22CERN0	ENVIRONMENTAL REMOTE SENSING

CATEGORY	L	T	P	CREDIT
PEES	3	0	0	3

Preamble

Remote sensing techniques are very much useful for environmental data acquisition and analysis. Geographical Information System is another important scientific tool in making decisions in environmental management issues based on the input data. This course work deals with the principles and techniques and the data processing in remote sensing, concepts of GIS, database management, GIS softwares and the applications of RS and GIS.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the fundamental principles of EMR.	TPS2	A	85
CO2	Understand remote sensing data transmission and collection systems.	TPS2	A	85
CO3	Apply basic image analysis techniques for environmental issues.	TPS3	B	75
CO4	Analysis of GIS data through the concepts of GIS data input and management.	TPS3	B	75
CO5	Application of Remote Sensing and GIS techniques to real-world environmental issues	TPS3	C	65
CO6	Interpret and extract pertinent information from survey of literature	TPS3	C	65

Syllabus

Principles of Remote Sensing: The electromagnetic spectrum - Atmospheric effects- Energy interaction and spectral responses of earth surface features. **Remote Sensors and Systems:** Sensors - Resolution types - Multispectral remote sensing systems - Thermal infrared remote sensing **Digital Image Processing and Analysis:** Image data format and types. Image interpretation techniques - Image pre-processing and rectification- Image enhancement - Image classification – Spatial filtering- Band combination. **Geographical Information System:** GIS concepts- Spatial and non spatial data, Vector and raster data structures- Data analysis. **Remote Sensing and GIS applications:** Monitoring changes in global vegetation cover-. Surface and ground water resources - Remote sensing of urban environments - Monitoring Earth's atmosphere, **Survey of Literature** - Literature Survey of RS-GIS.

Course content and lecture schedule

S. No	Topic	No. of Lectures	CO
1. Principles of Remote Sensing			
1.1	The electromagnetic spectrum - source, properties, radiation laws.	1	CO1
1.2	Atmospheric effects -scattering, absorption and reflection. Atmospheric windows-spectral reflectance- spectral signatures.	1	CO1
1.3	Energy interaction and spectral responses of earth surface features – land, water, vegetation and soils.	1	CO1
2. Remote Sensors and Systems			
2.1	Sensors- types and its resolutions	1	CO2
2.2	Thermal infrared sensors, Radar and microwave radiometers.	1	CO2
2.3	Multispectral Remote Sensing systems - data collection, multi spectral imaging using detectors, scanning mirrors, line arrays, scanners.	2	CO2
2.4	Thermal Remote sensing - properties, laws, data collection and examples.	1	CO2
3. Digital Image Processing and Analysis			
3.1	Image data format, types of data and its significance.	1	CO3
3.2	Image pre-processing- radiometric corrections- line drop, de stripping, scattering correction, geometric distortions and earth rotation and correction.	2	CO3
3.3	Image rectification – Generation of images to map by various important models.	2	CO3
3.4	Image enhancement and interpretation - linear contrast stretch, histogram equalization, logarithmic and exponential contrast enhancement.	2	CO4
3.5	Image classification - Image CO selection - supervised and Unsupervised techniques.	2	CO4
3.6	Spatial filtering - noise removal, edge enhancement, edge extraction and normalization.	2	CO4
3.7	Band combination – linear, ratioing, Principal component analysis.	2	CO4
4. Geographical Information System			
4.1	GIS concepts, map projection and coordinate system.	1	CO5
4.2	Spatial and non-spatial data, Vector and raster data structures	1	CO5
4.3	Vector data analysis - buffering and overlaying	2	CO5
4.4	Rasterd at a analysis - local, neighborhood, zonal operations and distance measure operations.	2	CO5

5. Remote Sensing and GIS applications			
5.1	Monitoring changes in global vegetation cover: EM spectrum of vegetation. Vegetation indices. Biophysical properties and processes of vegetation. Classification systems. Global vegetation and land cover mapping programmes.	2	CO6
5.2	Surface and ground water resources: Remote sensing of inland water quality and sediment load. Mapping watersheds and groundwater recharge and discharges at the regional scale.	2	CO6
5.3	Remote sensing of urban environments: Urbanization, land use and land cover, critical environmental assessment and disaster emergency response.	2	CO6
5.4	Monitoring Earth's atmosphere: The status of Earth's atmosphere – ozone, carbon dioxide and atmospheric dust.	1	CO6
6.0	Literature Survey of RS-GIS	2	CO6
Total Periods		36

22CERP0	SURFACE AND GROUND WATER QUALITY MODELLING

CATEGORY	L	T	P	CREDIT
PEES	3	0	0	3

Preamble

Modeling is a very useful tool in studying and forecasting the environmental quality parameters. The mathematical models would be of great support in taking managerial decisions towards the mitigation and remedial measure against the environmental degradation. This course work addresses the modeling techniques for surface and ground water quality.

Prerequisite

Completion of Undergraduate level courses on Environmental engineering.

Course Outcomes

On the successful completion of the course, students will be able to

COS	Course outcomes	TCE Proficiency scale	Expected Proficiency (grade)	Expected Attainment level (%)
CO1	Understand the fundamental components of modeling and its applications of various water resources challenges	TPS2	B	80
CO2	Describe water and ground quality processes such as reaction kinetics, diffusion and eutrophication	TPS3	B	80
CO3	Apply the results of water and Exam ine surface water quality models such as QUAL 2K, and USGS models such as MODFLOW	TPS3	B	80
CO4	Use the basics of modeling to stratified lakes and reservoirs	TPS2	B	80
CO5	Principles of groundwater quality modeling	TPS2	B	80
CO6	Illustrate problem solving skills including model calibration, validation, and verification	TPS3	C	70

Syllabus

Modeling Concepts: Introduction: Water Quality-Fundamental Quantities-Mathematical models, Historical Development of Water-Quality Models.- Basic modeling concepts - Reaction Kinetics-Reaction fundamentals-Analysis of Rate Data-Stoichiometry-Temperature Effects.- Completely Mixed Systems (Lakes)- Mass Balance , Applied Loadings, Step Input, Impulse Input.- Plug Flow Systems (Rivers): Types, Hydro geometry- Low-flow Analysis. Dispersion and Mixing - Flow, Depth and velocity-Routing and Water Quality.-Estuaries: Estuary transport-Net Estuarine Flow-Estuary Dispersion coefficient-Vertical Stratification. **Mass Transfer at Air-Water –soil Interface:** Dissolved Oxygen Modeling - Reaeration - Carbonaceous BOD, Nitrogenous BOD, Photosynthesis/Algal Respiration, Benthic Demands.- Sediments: Sediment transport overview- Suspended Solids-the Bottom Sediments-Simple Solids Budgets-Bottom Sediments as a Distributed Systems - Resuspension.- The Water Quality Modeling Process- Model Sensitivity.- Presentations of Case Study information and USEPA Water Quality Model QUAL2K. **Properties, Principles and Geology of Groundwater:** Hydraulic head and fluid potential, Hydraulic Conductivity and Permeability, heterogeneity and Anisotropy of hydraulic Conductivity - porosity, void ratio, unsaturated flow and water table.- Aquifers and Aquitards - Steady state flow and Transient flow-Transmissivity and Storativity, Equation of ground water flow-Limitation of Darcian Approach-Hydrodynamic dispersion.- Groundwater Geology: Lithology, Stratigraphy and Structure, Fluvial Deposits, Aeolian Deposits, Glacial Deposits, Sedimentary Rocks. **Solute Transport Modeling:** Transport processes: Non-reactive constituents in homogenous and heterogeneous media -Governing equations.- Hydrochemical behavior of contaminants-Nitrogen, trace metals organic substances.- Measurement of parameters: Determination of Velocity, Dispersivity and chemical partitioning -sources of contamination Presentation of case study - USGS Models.

Course Contents and Lecture Schedule

S.No	Topics	No. of Lectures	CO
1. Modeling Concepts			
1.1	Introduction, Water Quality - Fundamental Quantities - Mathematical models, Historical Development of Water-Quality Models.	2	CO1
1.1.1	Basic modeling concepts - Reaction Kinetics - Reaction fundamentals - Analysis of Rate Data - Stoichiometry -Temperature Effects	2	CO1
1.2	Completely Mixed Systems (Lakes) - Mass Balance, Applied Loadings, Step Input, Impulse Input	2	CO1

1.3	Plug Flow Systems (Rivers): Types, Hydro geometry- Low-flow Analysis	2	CO2
1.3.1	Dispersion and Mixing - Flow, Depth and velocity - Routing and Water Quality.	2	CO2
1.4	Estuaries: Estuary Transport - Net Estuarine Flow - Estuary Dispersion Coefficient - Vertical Stratification	2	CO2
2. Mass Transfer at Air-Water –soil Interface			
2.1	Dissolved Oxygen Modeling - Reaeration - Carbonaceous BOD, Nitrogenous BOD Demands	2	CO3
2.2	Photosynthesis / Algal Respiration, Benthic Modeling	2	CO3
2.3	Sediments: Sediment transport overview - Suspended Solids -the Bottom Sediments - Simple Solids Budgets - Bottom Sediments as a Distributed Systems - Resuspension.	1	CO3
2.4	MIKE Hydro river-MIKE SHE-FEFLOW applications-case studies	1	CO4
2.5	The Water Quality Modeling Process- Model Sensitivity.	2	CO4
2.6	Presentations of Case Study information and USE PA Water Quality Model QUAL2K	4	CO4
3. Properties, Principles and Geology of Groundwater			
3.1	Hydraulic head and fluid potential, Hydraulic Conductivity and Permeability, heterogeneity and Anisotropy of hydraulic Conductivity- porosity, void ratio, unsaturated flow and water table	2	CO4
3.2	Aquifers and Aquitards-Steady state flow and Transient flow-Transmissivity and Storativity, Equation of ground water flow-Limitation of Darcian Approach-Hydrodynamic dispersion	1	CO4
3.3	Groundwater Geology: Lithology, Stratigraphy and Structure,	1	CO5
	Fluvial Deposits, Aeolian Deposits, Glacial Deposits, Sedimentary	1	CO5
4. Solute Transport Modeling			
4.1	Transport processes: Non - reactive constituents in homogenous and heterogeneous media-Governing equations.	2	CO5
	Hydro chemical behavior of contaminants - Nitrogen, trace metals organic substances	1	CO6
4.2	Measurement of parameters: Determination of Velocity, Dispersivity and chemical partitioning - sources of contamination	2	CO6
4.3	Presentation of case study-USGS Models	2	CO6

22CERQ0	COMPUTATIONAL INTELLIGENCE FOR HYDROSYSTEMS

CATEGORY	L	T	P	CREDIT
PEES	3	0	0	3

Preamble

To develop skills of the students in the software application for simulation in Water resources management. To enable the students to understand application of the latest Information Technology tools available in water resources engineering .

Course Outcomes

On the successful completion of the course, students will be able to:

CO	Course Outcome	TCE Proficiency scale	Expected Attainment level (%)	Expected Proficiency (Grade)
CO1	To introduce the computational knowledge in the field of water resources systems.	TPS2	90	A
CO2	To comprehend Optimization concepts for water resource system planning and management	TPS2	85	B
CO3	To apply Decision support system in water resource system planning and management	TPS3	85	A
CO4	Understand better data management and analysis concept	TPS2	85	B
CO5	Understand role of IT in water resource management and use the latest intelligent technology and algorithms.	TPS2	85	A
CO6	To apply the simulation models in water resource management	TPS3	85	B

22CERR0	CONSTRUCTION EQUIPMENT MANAGEMENT

Category	L	T	P	Credit
PEES	2	1	0	3

Preamble

Selection of appropriate equipment based on the requirements of project is crucial for completion of project at optimal cost and time. The mistakes during selection of equipment for any construction can be avoided by scheduling and optimizing the construction equipment system productivity and making proper equipment financing decisions. This can be accomplished by understanding cost and life of equipment and its maintenance

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to:

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Select an appropriate equipment for a specific purpose	TPS3	B	70
CO2	Estimate various cost components of equipment for different specifications	TPS3	B	70
CO3	Adapt suitable financing methods by considering equipment replacement strategies	TPS3	B	70
CO4	Select the optimum productive equipment among available specifications	TPS3	B	70
CO5	Apply the concept of scheduling for horizontal and vertical construction projects	TPS3	B	70
CO6	Explain the methodology of equipment maintenance program.	TPS2	B	70

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1	Introduction		
1.1	Role of Heavy Equipment in Construction-Earthmoving Equipment Selection - Bulldozers, Front-end Loaders, Scrapers, Trucks	1	CO1
1.2	Excavating Equipment Selection-Excavators, Backhoes, Front shovels	1	
1.3	Lifting Equipment Selection- Cranes and Forklifts	1	
1.4	Other Equipment-Piles and Pile Driving Equipment, Production of Crushed-stone Aggregate, Concreting Equipment, Asphalt Mix Production and Placement Equipment.	1	
2	Ownership and Operating cost of equipment		
2.1	Ownership cost-depreciation cost	1	CO2
	Tutorials	2	
2.2	Cost of operating construction equipment	1	
	Tutorials	2	
2.3	Other methods- Corps of engineers, AGC, Peurifoy	1	
3	Equipment Life and Replacement Procedures		
3.1	Equipment life-Physical life, Profit life and Economic life	1	

3.2	Replacement Analysis-Theoretical methods, Practical methods, and sensitivity analysis	1	CO3
3.3	Replacement equipments election	1	
4	Equipment Financing Decisions		
4.1	Fundamental concepts of equipment economics	1	CO4
4.2	Financing Methods- Buy, rent and lease	1	
	Tutorials	2	
5	Optimizing Construction Equipment Productivity		
5.1	Peurifoy's & Phelps Method	1	
	Tutorials	2	
5.2	Load growth curve	1	
	Tutorials	2	
5.3	Stochastic Methods	1	
6	Scheduling Equipment Intensive projects		
6.1	Horizontal Construction Projects- Linear scheduling method, Precedence diagramming method	3	CO5
	Tutorials	2	
6.2	Vertical Construction Projects- lifting for high rise work, Erection-dismantling, concrete placing cranes	2	
7	Construction Equipment Maintenance		
7.1	Need for a maintenance program	2	CO6
7.2	Designing a Maintenance Program	2	
	Total Hours		36

22CERS0	QUANTITATIVE METHODS IN MANAGEMENT

Category	L	T	P	Credit
PEES	2	1	0	3

Preamble

Decision making in today's social and business environment has become a complex task. The uncertainty of the future and the nature of competition and social interaction greatly increase the difficulty of managerial decision making. This course work on quantitative methods is an aid to decision making which offers the decision-maker a method of evaluating every possible alternative by using various techniques to know the potential outcomes.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to:

COs	Course Outcome Statements	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Formulate problems mathematically using the concept of Linear Programming (LP)	TPS 3	B	65
CO2	Solve problems by graphical, Simplex method, Artificial Variable Technique-Big M method	TPS 3	A	75
CO3	Solution of LP problems by Artificial variable technique-Two phase technique, Duality concept; identify the special cases in obtained solution	TPS 3	A	75
CO4	Solve transportation, assignment and traveling salesman problems	TPS 3	A	75
CO5	Apply Dynamic Programming to solve shortest route problems, capital budgeting problems and LPP	TPS 3	B	65
CO6	Apply game and decision theories to problems and understand the principle of Monte-Carlo simulation	TPS 3	B	65

Syllabus

Mathematical Modeling in OR: Decision Making in Operations Research. The art and science of Operations Research - Elements of a decision model - art of modeling - Types of models -effect of data available on modeling - computations in OR - Phases of OR study. **Systems Design:** Problem formulation - conversion of statement problems into LPP standard format. **Linear Programming Problem:** Definition and properties of Linear Programming Problem, Standard form -Graphical solution of two variable problems, special cases. Simplex method - computational procedure & problems. Artificial variables - Big Mand two phase Techniques, Special cases in Simplex method. **Linear Programming Applications:** Duality concept, primal & dual properties. Transportation problems - Vogel's Approximation method, Determination of optimum solution. Assignment Problem - Hungarian method of solution, Traveling salesman problem. Applications to Civil Engineering problems. **Dynamic Programming:** Multistage decision process, Bellman's principle of optimality — Computational procedure — Illustrating Tabular method of solution — Computational procedure - Shortest route problem, Capital budgeting problem — Solution of Linear Programming Problem by Dynamic Programming. **Other Techniques:** Game theory-procedure and problems, Decision theory - procedure and problems. Simulation – Monte Carlo simulation -brief concept

22CERT0	CONTRACTS AND ARBITRATION

Category	L	T	P	Credit
PEES	2	1	0	3

Preamble

This course will create awareness on contracts for construction Industry; Impart knowledge on tender preparation, tendering process, Labour regulations, laws on arbitration, arbitration procedure and laws on dispute resolution in India

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to:

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Choose the types, essentials and clauses of construction Contracts with their legal aspects and provisions	TPS3	B	70
CO2	Prepare the tender and contract document based on the technical, contractual and commercial perspectives of the construction industry	TPS3	B	70
CO3	Solve the issues related to tendering and contracting process in the construction industry	TPS3	B	70
CO4	Demonstrate the need and importance of labour regulations in the construction industry based on the given situation	TPS3	B	70
CO5	Suggest suitable type of Alternate dispute resolution for the given situational problem in the Construction Industry	TPS3	B	70
CO6	Illustrate the rules, proceedings and background of Arbitration in the Construction Industry	TPS3	B	70

22CERU0	LEAN CONSTRUCTION

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

Lean Construction is an essential shift from conventional construction management. Lean approach seeks to improve project delivery by minimizing waste and maximizing value to the customer. This course has been intended to impart the key concepts, tools, and practices to improve the construction processes.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to:

COs	Course Outcome Statements	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Compare the concepts of Lean Production and Lean construction systems	TPS 2	A	75
CO2	Classify wastes in construction and apply lean techniques for waste reduction.	TPS 3	A	75
CO3	Apply Integrated Project Delivery principles in construction projects	TPS 3	A	75
CO4	Apply Collaborative planning techniques in construction projects	TPS 3	A	75
CO5	Apply various lean tools for planning, measuring the performances to ensure continuous improvement in construction projects	TPS 3	B	65
CO6	Summarize the importance of workplace organization, need for using Games for implementing lean concepts	TPS 3	B	65

Course Contents and Lecture Schedule :

Module No.	Topics	No. of Hours	Course Outcome
1.	Lean–Evolution		
1.1	Introduction – Lean Production - background and lean thinking.	2	CO1
1.2	Toyota Production System. Lean production philosophy	1	
1.3	Introduction to Lean Construction.	2	

	Difference between Lean Production and Lean Construction.		
2.	Introduction to Lean construction		
2.1	Lean Construction -Overview and Definition, Value Proposition	2	CO2
2.2	Waste in Construction, Terminologies in lean Construction	3	
3.0	Concept of IPD and lean		
3.1	Concepts of Integrated Project Delivery	2	CO3
3.2	Value stream mapping for construction processes, case studies	3	
3.3	Minimizing waste - value - add edvs. non-value added activities	2	
3.4	Integrated Project Delivery, Case study discussions	2	
4.0	Lean Tools		
4.1	Collaborative Planning – Master Planning, Make Ready Schedule. Production Planning Tools for Collaborative Planning	3	CO4
4.2	Measuring Performances - Plan Percent Complete - PPC	2	
5.0	Other Lean Tools:	CO5	
5.1	Workflow, Visual Management, 5S,	2	
5.2	Just - In - Time, Cycle time analysis	2	
5.3	Constraint Analysis and solution through A3 sheets, Continuous improvement	2	CO5
5.4	Case study discussions	2	
6.0	Lean culture in organization		
6.1	Building Lean Culture in an Organization,	2	CO6
6.2	Human resources and managing change in organization, Team building and training	2	
	Total Periods	36

22CERV0	MATERIAL PROCUREMENT AND MANAGEMENT	Category	L	T	P	Credit
		PEES	2	1	0	3

Preamble

This course focuses on the core principles of project procurement management, material planning and evaluation methods of materials consumed in various infrastructure domains. Students are exposed to effective techniques for successfully allocating risks and delivering projects which help in acquiring future projects.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the scope, functions, and importance of material procurement management in the construction industry	TPS2	B	70
CO2	Classify the materials of construction, compare the different sources of procurement, and conduct vendor analysis	TPS3	B	70
CO3	Select and apply inventory control technique needed for the effective management of Inventory in the	TPS3	B	70
CO4	Solve the problems on Economic ordering quantity considering order point control, safety stock, stock outs and discounts	TPS3	B	70
CO5	Apply site layout procedure and site organizational methods for the management of stores in the Construction	TPS3	B	70
CO6	Apply statistical methods of sampling technique to compute the quality of material. Apply material management systems in planning, procurement, inventory and cost	TPS3	B	70

Syllabus

Introduction: Importance of material management and its role in construction industry, scope, objectives and functions - Integrated approach to material management - Role of materials manager. **Classification and Codification of materials of construction:** ABC, FSN, VED, SOS analysis - Procedure and its use, Standardization in materials and their management, Procurement - Identification of sources of procurement, vendor analysis. Materials Requirement Planning (MRP), Purchase procedure, legal aspects. **Inventory Management:** Store Purchase Manual - Contractors Obligation - Inventory Control techniques - EOQ, Advantages and limitation of use of EOQ, Periodic ordering, order point control, safety stock, stock outs, Application of ABC analysis in inventory control, Just in Time (JIT) Management, Indices used for assessment of effectiveness of inventory management. **Stores Management:** Receipt and inspection, care and safety in handling, loss on storage, wastage, Bulk purchasing, site layout and site organization, scheduling of men, materials and equipment. **Quality Control** - Conventional methods of quality control of Construction materials. Statistical methods of quality control, sampling techniques in quality control process
- Quality management and economics. **Project procurement processes.** Materials Management Systems (MMS) and its scope in materials planning, procurement, inventory control, cost control etc.

22CERW0	MANAGEMENT OF HUMAN RESOURCE, SAFETY AND QUALITY

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

This course will create awareness on the management of human resources, safety and quality for an organization; Impart knowledge on the functions, importance and various codes and standards available for managing human resources, safety and quality.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the functions, process and importance of Human resource Management in the Construction Industry	TPS2	B	70
CO2	Relate the grievances faced in a construction industry with the various codes and laws available in the human resource management and suggest suitable measures to solve them	TPS3	B	70
CO3	Interpret responsibilities of parties in organizations and apply appropriate practices to ensure safety in organizations	TPS2	B	70
CO4	Solve the safety related crisis in construction using the Ergonomics and OSHA Codes and Standards	TPS3	B	70
CO5	Explain the Elements, Characteristics, and the importance of ISO 9000 codes and standards of Quality in Construction Industry	TPS2	B	70
CO6	Compute the Quality of a product using statistical methods of quality control sampling technique	TPS3	B	70

Syllabus

Human Resources Management - Concept - Growth - Role and functions. Manpower Planning for Construction Companies - Line and Staff functions - Recruitment, selection, placement, induction and training - over staffing; Time office and establishment functions; wage and salary administration - Discipline - Separation Process. Labor Legislation- labor laws related to construction industry – Code of Ethics and Conduct - Interstate migration - Industrial relations - Collective bargaining - Worker's participation in management. Grievances handling - discipline - role of law enforcing agencies and judiciary - women in construction industry. Safety Management - importance of safety- causes of accidents - responsibility for safety - Role of various parties in safety management - safety benefits - approaches to improve safety in construction for different works. Safety Implementation - Application of Ergonomics in the construction industry - prevention of fires at construction site - Safety audit, OSHA Codes and Standards for Construction Safety. Quality Management in Construction - Importance of quality - Elements of quality - quality characteristics - quality by design - quality conformance. ISO Codes and standards- ISO 9001-2000 Family of Standards- Benefits of ISO 9000- Quality Control and Assurance - identification and traceability for quality control. Documentation - Organization for quality control, Quality Control by statistical methods- Statistical Quality Control with sampling by attributes- Statistical Quality Control with sampling by variables - Importance of specifications- Incentives and penalties in specifications - Workmanship as a mark of quality. Quality assurance techniques - Inspection, testing, sampling, Cost of quality. Introduction to TQM, Lean Six Sigma and Sustainability.

22CERX0	TRAFFICENGINEERINGAND MANAGEMENT

Category	L	T	P	Credit
PC	3	0	0	3

Preamble

Reliable and efficient traffic engineering management is crucial in our daily lives. This course imparts the student's, importance of transportation, various traffic engineering studies and traffic flow characteristics. The students will also acquire proficiency in the design of traffic facilities and also in efficient traffic management techniques. Further, students will be exposed to road safety aspects and studies

Prerequisite

Fundamentals of Highway and Railway Engineering

Course Outcomes

On the successful completion of the course students will be able to

COS	Course Outcome Statement	TCE Proficiency Scale	Attainment level	Proficiency level
CO1	Explain traffic flow and its characteristics	TPS3	B	65
CO2	Identify various traffic engineering studies	TPS3	B	65
CO3	Principles of road signs, markings, street furniture.	TPS2	B	65
CO4	Design of traffic signal	TPS3	B	65
CO5	Design of rotary intersection, principles of grade separators	TPS3	B	65
CO6	Explore techniques for traffic management	TPS2	B	65

Syllabus

Introduction: Significance and scope, Characteristics of vehicles and road users, Skid resistance and Braking Efficiency (problems). Components of Traffic Engineering- Road, traffic and land use characteristics **Traffic Surveys and analysis:** Traffic surveys- speed, journey time and delay surveys- vehicles, volume survey including non-motorized transport- Methods and interpretation- origin and destination surveys. Parking survey, pedestrian studies Accident analysis (Concepts and problems) Traffic Flow- Introduction to traffic flow theory, Level of service-concept, application and significance. **Traffic Control:** Traffic signs, Road markings, Design of traffic signals and signal co-ordination (Problems), Traffic control aids and street furniture, street lighting, Computer application in signal design. **Geometric design of Intersection:** Conflicts at Intersection, Classification of at grade intersection-Channelized Intersection. Principles of Intersection design. Elements of Intersection design, rotary design, Grade separation and Interchanges. **Traffic management:** Transportation system management (TSM) – Travel Demand Management (TDM)-Traffic management measures – Traffic calming measures -Introduction to Intelligent Transportation system (ITS).

22CERY0	PAVEMENT ANALYSIS AND DESIGN

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

The course aims to make the students learn the principles of Idea about various material used in pavement construction and their properties. Further students understand load distribution characteristics of flexible and rigid pavements and concept of development of stresses and strains within the pavement system. This also imparts Knowledge about pavement design methods of pavements and their components.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course students will be able to

CO	Course Outcome Statement	TCE Proficiency Scale	Attainment level	Proficiency level
CO1	Understand about the pavement layers and factors considered for the design of pavements	TPS2	B	65
CO2	The concept of pavement evaluation and analysis	TPS2	B	65
CO3	The concept of development of stresses and strains within the flexible pavements	TPS3	B	65
CO4	Knowledge about flexible pavement design methods	TPS3	B	65
CO5	The concept of development of stresses and strains within the rigid pavements	TPS3	B	65
CO6	Knowledge about rigid pavement design methods	TPS3	B	65

Syllabus

Introduction to Pavements: Types of pavements, Flexible and rigid pavements, Functions of individual layers, Factors considered in Pavement Design: Traffic factors, Material properties, Climatic effects Traffic Analysis: ADT, AADT, Truck Factor, Growth Factor, Lane Distribution and Vehicle Damage Factor. Bituminous Mix design – Marshall and SUPERPAVE method- Pavement quality Concrete **Pavement Evaluation and Maintenance:** Pavement Evaluation- Benkelman beam and Falling weight deflect meter - Overlay design, Pavement condition survey, Flexible and rigid pavement-failure, causes and treatment. **Stresses and strains in flexible pavements:** Stress inducing factors in flexible pavements, Vehicle Pavement interaction, Stresses and deflections in homogeneous soil mass, Load equivalency factor, Burmister's layer theory: Solutions for one, two and three layered pavement systems. **Methods of flexible pavement design:** Principles of Mechanistic- Empirical Pavement Design (MEPD), Methods of flexible pavement design: IRC Method. **Stresses in Rigid Pavements:** Westergaard's theory and assumptions, Types of stresses: Wheel load stresses, Temperature stresses, Critical combination of stresses. **Design of cement concrete pavements** Rigid pavement design methods: IRC method. Types of joints in cement concrete pavements – functions and requirements Joint spacing – Design of dowel bars and tie bars (IRC method). Introduction to softwares for design of pavements

11. Latest revisions of IRC codes: IRC: 37-2012 and IRC: 58 - 2013.
12. Manual for construction and supervision of Bituminous works, MoRTH 2001

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	Course Outcome
1.0	Introduction to Pavements		
1.1	Types of pavements- Flexible and rigid pavements	1	CO1
1.2	Functions of individual pavement layers	1	
1.3	Factors considered in Pavement Design: Traffic factors, Material properties, Climatic effects Traffic Analysis: ADT, AADT, Truck Factor, Growth Factor, Lane Distribution and Vehicle Damage Factor	2	
1.4	Bituminous Mix design - Marshall and SUPERPAVE method-Pavement quality concrete.	2	
2.0	Pavement Evaluation and Maintenance		
2.1	Pavement Evaluation-Benkleman beam and Falling weight deflect meter, Overlay design	2	CO2
2.2	Pavement condition survey	2	
2.3	Flexible and rigid pavement-failure, causes and treatment	2	
3.0	Stresses and strains in flexible pavements		
3.1	Stress inducing factors in flexible pavements, Vehicle Pavement interaction	2	CO3
3.2	Stresses and deflections in homogeneous soil mass, Load equivalency factor	2	
3.3	Burmister's layer theory: Solutions for one, two and three layered pavement systems	2	
4.0	Methods of flexible pavement design		
4.1	Principles of Mechanistic- Empirical Pavement Design (MEPD)	3	CO4
4.2	Methods of flexible pavement design: IRC Method,	3	
5.0	Stresses in Rigid Pavements		
5.1	Westergaard's theory and assumptions	2	CO5
5.2	Types of stresses: Wheel load stresses	2	
5.3	Temperature stresses, Critical combination of stresses.	2	
6.0	Design of cement concrete pavements		
6.1	Rigid pavement design methods: IRC method.	3	CO6
6.2	Types of joints in cement concrete pavements - functions and requirements Joint spacing – Design of dowel bars and tie bars (IRC method). Introduction to softwares for design of pavements	3	
	Total Hours	36 Hrs

22CERZ0	DESIGN OF FOUNDATION AND SUBSTRUCTURE

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

This course aims at equipping students with adequate knowledge on design principles of sheet pile walls, analysis and design of raft foundation and design of pile foundations. Furthermore, students would be able to estimate the lateral resistance of piles, load carrying capacity, settlement of pile groups, design pile caps, stone columns and caisson foundation.

Prerequisite

Soil Mechanics and Foundation engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand various types of sheet pile walls and design them.	TPS3	A	65
CO2	Explain the necessity of raft foundation and analyze them.	TPS3	A	65
CO3	Design piles subjected to vertical loads and pile caps.	TPS3	A	65
CO4	Estimate the capacity of batter piles, and analyze piles subjected to lateral loads and pile groups.	TPS3	A	65
CO5	Analyze and design caisson foundation.	TPS3	A	65
CO6	Analyze and design Braced cuts.	TPS3	A	65

22CEQB0	SUSTAINABLE CONSTRUCTION AND BUILDING MATERIALS

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

This course presents a study of the concepts and techniques of sustainable construction. An in-depth review of sustainable materials and construction techniques will be covered.

Prerequisite

Basic Knowledge on building construction materials.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Attainment level	Proficiency level
CO1	Examine the properties of common construction materials and understand the transition toward sustainable materials.	TPS3	B	65
CO2	Describe the materials used in construction	TPS3	B	65
CO3	Explain the method of estimating the amount of energy required for building.	TPS3	B	65
CO4	Explore the concept of thermal comfort and utility of solar energy in buildings.	TPS3	B	65
CO5	Describe Non-renewable sources of energy and Environmental aspects	TPS3	B	65
CO6	Understand the concepts of water and solid waste management.	TPS3	B	65

CO6	-	-	-	4	4	30	2	2	10	-	-	-	-	-	20

Syllabus:

Introduction and definition of Sustainability - Carbon cycle - role of construction material: concrete and steel, etc -Energy use, carbon emissions, water use, waste disposal; Building materials: sources, methods of production and environmental Implications. **Materials used in sustainable construction**-Framed Construction, Masonry Construction. Resources for Building Materials, Alternative concepts. Recycling of Industrial and Buildings Wastes. Biomass Resources for buildings. Construction materials and indoor air quality - No/Low cement concrete – Recycle- Life cycle and sustainability. **Energy calculations**-Components of embodied energy - calculation of embodied energy for construction materials - Energy concept and primary energy - Embodied energy via-a-vis operational energy in conditioned building - Life Cycle energy use. **Comfort in buildings**-Thermal Comfort in Buildings- Issues; Heat Transfer Characteristic of Building Materials and Building Techniques. Incidence of Solar Heat on Buildings-Implications of Geographical Locations. Utility of Solar energy in buildings. Concepts of Solar Passive Cooling and Heating of Buildings. Low Energy Cooling. Case studies of Solar Passive Cooled and Heated Buildings. **Environmental effects**- Non-renewable sources of energy and Environmental aspects – energy norm, coal, oil, natural gas - Nuclear energy - Global temperature, Green house effects, global warming - Acid rain: Causes, effects and control methods. **Water & solid waste management**- Concepts of Green Composites. Water Utilisation in Buildings, Low Energy Approaches to Water Management. Management of Solid Wastes. Management of Sullage Water and Sewage. Urban Environment and Green Buildings. Green Cover and Built Environment.

Learning Resources:

4. William P Spence, Construction Materials, Methods & Techniques (3e), Yesdee Publication Pvt. Ltd, 2012.
5. Rebecca L. Henn; Andrew J. Hoffman (2013), Constructing Green the Social Structures of Sustainability (Urban and Industrial Environments), MIT Press.
6. Steve Goodhew Sustainable Construction Processes: A Resource Text ISBN: 978-1-40518759-6 May 2016 Wiley-Blackwell.
7. S.B.Marinkovic, Life cycle assessment (LCA) aspects of concrete, Woodhead Publishing Series in Civil and Structural Engineering 2013, Pages 45-80.

Course Contents and Lecture Schedule:

Module No.	Topic	No. of Lectures	Course Outcome
1.0	Introduction to sustainability:		
1.1	Définition - Carbon cycle - Energy use, Carbon émissions	2	CO1
1.2	Role of construction material: concrete and steel, etc	1	
1.3	CO2 contribution from cement and other construction materials	1	
1.4	Building materials: sources and methods of production and environmental Implications	2	
2.0	Materials used in sustainable construction:		
2.1	Framed Construction, Masonry Construction.	2	CO2
2.2	Resources for Building Materials, Alternative concepts.	1	
2.3	Recycling of Industrial and Buildings Wastes	1	
2.4	Biomass Resources for buildings	1	
2.5	Recycle- Life cycle and sustainability	1	
3.0	Energy calculations:		
3.1	Components of embodied energy	1	
3.2	Calculation of embodied energy for construction materials	1	

3.3	Energy concept and primary energy	1	CO3
3.4	Components of Embodied energy - operational energy in conditioned building Life Cycle energy use	2	
4.0	Comfort in buildings:		
4.1	Thermal Comfort in Buildings- Issues; Heat Transfer Characteristic of Building Materials and Building Techniques.	2	CO4
4.2	Incidence of Solar Heat on Buildings - Implications of Geographical Locations.	1	
4.3	Utility of Solar energy in buildings. Concepts of Solar Passive Cooling and Heating of Buildings. Low Energy Cooling.	2	
4.4	Case studies of Solar Passive Cooled and Heated Buildings.	1	
5.0	Environmental effects:		
5.1	Non-renewable sources of energy and Environmental aspects	2	CO5
5.2	Energy norm, coal, oil, natural gas - nuclear energy	1	
5.3	Global temperature, green house effects, global warming -	1	
5.4	Acid rain: Causes, effects and control methods	2	
6.0	Water & solid waste management:		
6.1	Concepts of Green Composites. Water Utilisation in Buildings	2	CO6
6.2	Low Energy Approaches to Water Management.	1	
6.3	Management of Solid Wastes	1	
6.4	Management of Sullage Water and Sewage.	1	
6.5	Urban Environment and Green Buildings.	1

22CEQC0	URBAN PLANNING AND DEVELOPMENT

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

Urban planning and design must seek to improve the quality of the life of people living in complex urban conditions, with full respect for indigenous, cultural and social needs. This course is intended to raise the awareness of the components of physical city and the forces that shape it and the planning of urban infrastructure in the urban context

Prerequisite

Nil

Course Outcomes

On the successful completion of the course students will be able to

CO	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Attainment level %
CO1	Understand the characteristics and types of urban settlements	TPS2	B	65
CO2	Identify the role of urban planning in development	TPS2	B	65
CO3	Understand the theories and models of urban planning	TPS2	B	65
CO4	Understand the urban guidelines for development and planning	TPS3	B	65
CO5	Design infrastructure with an understanding of the urban context and sustainable development	TPS3	B	65
CO6	Understand the urban development with example	TPS3	B	65

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	Course Outcome
1.0	Introduction to Urban settlements		
1.1	Definition of settlements, rural and urban settlements – their characteristics; Basic components, factors influencing urban settlements and their interrelationships	2	CO1
1.2	Anatomy and classification of Human settlements based on configuration of shape, function, location, Resource, Population & Occupational structure	2	
1.3	Structure and form of Human settlements – Linear, non-linear and circular -Combinations	1	
1.4	Reasons for development - Major Growth factors - advantages and disadvantages - case studies - factor influencing development / decay	2	
2.0	Urban Planning		
2.1	Need, General issues and potentials of urban planning; Planning process and monitoring	2	CO2

2.2	Planning machinery in India – levels of planning – Town and country planning act.	2	
2.3	Types of development plans - Regional plan, Master plan, Structure plan, Zonal Development plan – their scope and content;	2	
2.4	Urban Development programmes like JNNURM, TNUDP, IDSMT etc	1	
3.0	Urban development		
3.1	Introduction to modes of planning	1	CO3
	Theories of urban development;	2	
	Land Use models	1	
3.2	Various urban development strategies and initiatives in India,	1	
3.3	Smartcity - overview	1	
4.0	Guidelines for Urban Development and Infrastructures		
4.1	National and International guidelines; planning norms and standards for zoning and sub division	2	CO4
4.2	Physical Infrastructure - Transportation, waste management and drainage	1	
4.3	Social Infrastructure - educational, health, recreational, cultural etc	1	
4.4	Residential and commercial infrastructure	1	
5.0	Impact of urbanization		
5.1	Indicators of ecological analysis and impact of urbanization anddevelopment	1	CO5
5.2	Environmental impact of urbanization anddevelopment	1	
5.3	Social impact of urbanization anddevelopment	1	
5.4	Environmental Impact assessment - need , process and issues ; social and environmental cost benefit;	2	
6.0	Case Studies		
6.1	Best practices in urban planning and design – inter-national case studies	2	CO6
6.2	Best practices in urban planning and design - national case studies	2	
6.3	Case studies of Planning of large scale residential Infrastructure at urban level	1	
6.4	Case studies of Planning of large scale commercial Infrastructure at urban level	1	
	Total Hours	36

Syllabus

Classification of Buildings: Classification of buildings as per NBC. Site selection and its influencing factors, National Building Code provisions for components of residential buildings: Open spaces, Living room, Bed room, Kitchen, Bathroom and Water closet, National Building Code provisions for ventilation aspects in buildings. NBC provisions for fire safety in buildings.

Materials for Construction: Natural materials - stones, aggregates, timber, lime. Man-made materials: bricks, cement, steel, concrete, plastics, fly ash, GGBS, Silica fume, PCC and RCC.

Technologies of Construction: Masonry-Stone and Brick, Damp Proof Course, Lintels and Arches, Flooring, Roofing, Stairs, Scaffolding, Pointing, Plastering, Painting, Special Construction Techniques: Shoring, Underpinning

Construction Techniques: Structural systems - Load Bearing Structure - Framed Structure - Load transfer mechanism – floor system - Development of construction techniques - High rise Building Technology - Seismic effect - Environmental impact of materials.

Construction Practices: Specifications, details and sequence of activities and construction co-ordination – Site Clearance – Marking – Earthwork - construction joints – movement and expansion joints

Construction Equipment: Selection of equipment for earth work - earth moving operations - types of earthwork equipment - tractors, motor graders, scrapers, front end loaders, earth movers – Equipment for foundation and pile driving. Equipment for compaction, batching, mixing and concreting - Equipment for material handling and erection of structures – types of cranes - Equipment for dredging, trenching, tunnelling.

22CEQF0	BUILDING ESTIMATION AND VALUATION	Category	L	T	P	Credit
		PSE	2	1	0	3

Preamble

Lean Construction is an essential shift from conventional construction management. Lean approach seeks to improve project delivery by minimizing waste and maximizing value to the customer. This course has been intended to impart the key concepts, tools, and practices to improve the construction processes.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency in Grade	Expected Attainment Level in %
CO1	Draw the section through a wall and explain the various components of a building with purpose.	TPS 2	A	75
CO2	Estimate quantities of items of works- Foundation, Plinth, DPC, Floor components, steps for residential buildings of load bearing wall -Centre line method knowing the units of measurement of works	TPS 3	A	75
CO3	Estimate quantities of items of works- Superstructure wall, Roof with weathering course, Plastering, painting, parapet for residential buildings of load bearing wall - Centre line method knowing the units of measurement of works	TPS 3	A	75
CO4	Estimate quantities of items of works for residential buildings of framed type - Centre line method	TPS 3	A	75
CO5	Explain the need and various terms in connection with valuation of buildings	TPS 2	B	65
CO6	Value buildings based on different methods	TPS 3	B	65

Syllabus

Components of a building: Section through a wall - components of a building with purposes, Estimate- definition, need. **Units of Measurement of works.** Preparation of Preliminary estimate of buildings of buildings – plinth area rate method, cubic content method. **Detailed Estimate of building:** Individual wall method- brief concept. Estimate quantities of items of works for residential buildings (Excavation for foundation, PCC, Footings, Plinth, DPC, Floor components, Superstructure walls with appropriate deductions, roof, weathering course, plastering, parapet, steps at plinth level etc) of load bearing type using Centre line method. **Estimate of Buildings with framed structure and sloped roof. Valuation of buildings- Concept:** Meaning and need for valuation, Terms in connection with valuation of buildings- Methods of valuation of buildings, criteria for valuing a building. **Valuation of buildings- procedure and problems:** Valuing a building based on methods such as rental method, direct comparisons of capital value, profit, cost, depreciation method and development method.

22CEGA0	ENTREPRENEURSHIP DEVELOPMENT

Category	L	T	P	Credit
IE	3	0	0	3

Preamble

This course will give the students the foundational experience of the entire cycle of entrepreneurship, through a combination of theory and practice. Students will learn what it takes to be an entrepreneur, recognizing business opportunities and the basics to create, launch and manage new businesses.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Identify and evaluate business opportunities, entrepreneurial skills, and discover potential market niches.	TPS 2	B	65
CO2	Understand customers and markets, including segments, positioning, and personas, to effectively target specific customer needs.	TPS 2	B	65
CO3	Design and validate a sustainable business model with a unique value proposition and competitive advantage.	TPS 3	B	65
CO4	Validate a viable business model, conduct risk analysis, and effectively build and test Minimum Viable Products (MVPs) for their startups.	TPS 3	B	65
CO5	Apply economic and financial analysis to assess feasibility, develop sales and financial plans, and create effective go-to-market strategies.	TPS 3	B	65
CO6	To demonstrate a practice venture by applying the key concepts learned for Entrepreneurship	TPS 3	B	65

Syllabus

Opportunity & Customer Analysis - Entrepreneurial mindset, Entrepreneurial skills, Problem Identification, and Opportunity Discovery - discovery, analysis, validation and pitch. Customer and Markets - market types, segments, size, positioning and customer persona and Case studies. **Business Model & Validation** - Sustainable Differentiation Strategy - core value proposition, sustainable differentiation strategy, value delivery. Competitive Advantage - competitor identification, critical product features and feature ranking. **Business Model Validation & MVP** - Business model and risk analysis - build and test business model, decision taking to pivot or persevere, risk analysis. Build your MVP - prototyping and testing, customer surveys, refining the prototype, Minimum Viable Product and Case studies **Economics & Financial Analysis** Financial Feasibility- build sales plan, build people plan, build financial plan and unit economics, build funding plan, key metrics identification. Go To Market Strategy - identification of appropriate go to market channels, develop channel partners, analyse market penetration strategy, build digital marketing plan. **Growth & Scale Up** - Managing growth and Targeting Scale - devise a

growth plan, structure the scaling strategy, customer acquisition, enhancing productivity, process improvements, operational excellence. Funding Strategy - create sources and uses of funds statement, map the start-up lifecycle to funding options, valuation and creating the pitch deck.
Practice Venture - Create a practice venture and demonstrate key concepts learned.

22CEGB0	SUSTAINABILITY ENGINEERING

Category	L	T	P	Credit
IE	3	0	0	3

Preamble

This course will explore the principles, methodologies and technologies that underpin Sustainability Engineering. This course is designed to equip students with the knowledge and skills necessary to become a steward of our planet through the practice of Engineering. Students will understand the importance of Sustainability Engineering and will be able to apply its principles in real-world scenarios. It will lead Engineers towards a more resilient, equitable and environmentally responsible world.

Prerequisite

- Nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency Level	Expected Attainment Level

22CEGC0	GEOSPATIAL DATA PROCESSING AND PHOTOGRAMMETRY

Category	L	T	P	Credit
IE	3	0	0	3

Preamble

This course deals with the acquisition, processing and interpretation of satellite images to analyze and extract information from them using remote sensing tools, GIS and Photogrammetry. Geographical Information System (GIS) is a multidisciplinary field that has been used for data integration, analysis and decision making in fields. Photogrammetry uses imaging rather than collecting light wavelength data. It involves determining the spatial properties and dimensions of objects captured in photographic pictures. Photogrammetry is exceptionally common in applications such as measuring landforms and terrain and developing topographic maps.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Appraise the types of remote sensing such as multispectral, infrared, thermal and microwave remote sensing.	TPS2	A	70
CO2	Explain and apply radiometric and geometric image enhancement operation to an image.	TPS3	A	70
CO3	Classify the pre-processed satellite image using supervised and unsupervised Classifiers.	TPS3	A	70
CO4	Describe the processing of aerial photos using photogrammetry for the map production.	TPS2	A	70
CO5	Analyze spatial and non spatial data with GIS for various application.	TPS3	A	70
CO6	Illustrate the various application of remote sensing data and suggest the type of data used for specific applications.	TPS2	A	70

B.E DEGREE (Civil Engineering) PROGRAMME

- **22CEQG0 – Digital Project Planning and Control**
- **22CEPY0 – Sustainable Development**

For the Students admitted from the academic year 2022-2023 onwards

THIAGARAJAR COLLEGE OF ENGINEERING

(A Government Aided Autonomous Institution affiliated to Anna University)

MADURAI – 625 015

Approved in 68th Academic Council Meeting held on 21.12.2024

22CEQG0	DIGITAL PROJECT PLANNING AND CONTROL

Category	L	T	P	Credit
PSE	2	0	2	3

Preamble

Complex infrastructure projects can be managed effectively if the project managers have the means to plan and control the schedules and costs of the work required to achieve their technical performance objectives. While planning projects aspects such as resources needed for its accomplishment, its costs and duration are to be determined. These can be found by adopting the modern techniques of project management. This theory cum practical course is designed to give an exposure on planning, scheduling and control of projects using application of network techniques.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to:

Syllabus

Project Management: Definition of project, Work Break down structure, Activities and its relationship, Rules for drawing network diagram, objectives and function of project management. **Project Time Management:** Gantt Chart and its analysis, AON Diagram and its analysis, PDN Diagram and its Analysis. Critical Path Method Analysis. **Resource Management:** Types of resource- Time, Men, Material, Machinery, Money, Space. Balancing of resource- Resource Smoothing technique- Time constraint. Resource leveling technique- Resource constraint **Resource optimization:** Types of cost – Direct, Indirect and Total Cost. Variation of Cost with time. Schedule Compression Techniques- Crashing, Fast Tracking & Re-estimation- Crash time and crash cost. Optimize project cost for time and resource. **GUI of Primavera:** Primavera Installation and GUI, Creation of EPS, Project, WBS and Calendar. Defining the Relationship and mentioning the constraints of the project. **Analysis of Project in Primavera:** Levels of Schedule, Importance and aspects of schedule. Baseline Creation and Updating of Project. **Resource Balancing and Tracking:** Resource Creation and Assigning. Balancing of resource. Cost calculation of Project and Optimizing using Excel. Tracking and forecasting the project using Primavera and Excel.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	COs
1.0 Project Management:			
	Definition of project, Work Break down structure, Activities and its relationship.	1	CO1
	Rules for drawing network diagram, objectives and function of project management.	1

22CEPY0	SUSTAINABLE DEVELOPMENT

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

This course explores the principles, challenges and frameworks essential to achieve sustainability globally and locally. Covering the evolution from Millennium Development Goals (MDGs) to Sustainable Development Goals (SDGs), it examines the role of international agreements, India's National Action Plan on Climate Change (NAPCC) and global financing for SDGs. Key Engineering principles, green economy concepts, tools and certification are introduced to assess sustainability. With a focus on the role of Civil Engineers, this course also covers Environmental, Social and Governance (ESG) reporting, equipping students to lead sustainable initiatives effectively.

Prerequisite

- Nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency Level	Expected Attainment Level (%)
CO1	Understand the basics of Sustainable Development and its status, challenges and barriers	TPS2	B+	65
CO2	Familiarize Sustainable Development Goals (SDGs), Targets and Indicators	TPS3	B+	65
CO3	Understand the International protocols and commitments towards achieving Sustainability	TPS2	B+	65
CO4	Explore Sustainable strategies and Measure Sustainability through Performance indicators	TPS3	B+	65
CO5	Explore innovative and Sustainable Civil Engineering Design concepts and tools	TPS3	B+	65
CO6	Understand the structure and standards required for Environmental, Social and Governance report	TPS3	B+	65

22CE1B0	GREEN CONSTRUCTION

Category	L	T	P	Credit
PE	1	0	0	1

Preamble

This course will create awareness on the impact of constructions on the environment and the various techniques of mitigating the adverse impacts

Prerequisite

Knowledge on building construction

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Enumerate the aspects of green construction and certification systems	TPS3	B	65
CO2	Select materials and appropriate construction technologies for the green construction	TPS3	B	65
CO3	Plan green buildings knowing various innovative techniques	TPS3	B	65
CO4	Apply concept of sustainability to various construction activities	TPS3	B	65
CO5	Suggest Mitigation measures for environmental degradation	TPS3	B	65
CO6	Address Impact of Life cycle effects, durability and certification process	TPS3	B	65

22CE1C0	PRECAST TECHNOLOGY IN BUILDINGS

Category	L	T	P	Credit
PE	1	0	0	1

Preamble

Precast is an industrialized way to build. It means transfer of work from sites to factories which improves productivity, quality and shortens construction time of a building. Precast also has lower lifetime costs than any other building solution. This is possible due to consistent high quality of industrially produced products. Precast suits well for any type of building namely; residential, commercial, industrial, public etc. This course gives an exposure on the need and importance of using precast technology along with awareness on the technology.

Prerequisite

Knowledge on building construction

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Compare Precast and cast in-situ technology with implementation challenges	TPS3	B	65
CO2	Explain the details of production erection of Hollow core slab with precautions to be taken	TPS3	B	65
CO3	Identify the planning aspects for precast projects along with Machinery usage	TPS3	B	65
CO4	Enumerate the details of Stacking, Handling, Transportation and Erection of precast elements with precautions	TPS3	B	65
CO5	Discuss the fixing and jointing in precast buildings with construction sequence	TPS3	B	65

22CE1D0	FRAMING OF STRUCTURES AND OPTIMUM FOUNDATION SYSTEMS

Category	L	T	P	Credit
PE	1	0	0	1

Preamble

This course is framed to give an overview on the guidelines for idealization and basic concepts in framing of structures along with optimum foundation systems.

Prerequisite

Knowledge on structural analysis and design of RCC and Steel elements

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the concept of load transferring mechanism and various components of structures.	TPS3	B	65
CO2	Enumerate the details of RCC structural behaviour and their Reinforcement detailing	TPS3	B	65
CO3	Enumerate the details of Steel structural behaviour and their Reinforcement detailing	TPS3	B	65
CO4	Identify and choose an appropriate foundation system for a given situation	TPS3	B	65

*** Weightage depends on Bloom's Level, number of contact hours,

22CE1E0	LARGE SCALE SYSTEMS

Category	L	T	P	Credit
PE	1	0	0	1

Preamble

The aim of this course is to sensitize the undergraduates about the basic concepts of systems engineering methodologies to approach the Socio-Techno problems in a holistic manner. This course will address the basic concepts of cause-effect impacts due to the interrelationships of components and elements of systems in a complex environment.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Identify tools for process of forecasting and assessment - the indented and unintended impacts on policies and technological solutions	TPS3	B	65
CO2	Participate and coordinate in group discussions in organizations.	TPS3	B	65
CO3	Understand the components and elements involved in DPR, FR, EIA, EMS and Resettlement & Rehabilitations programs.	TPS3	B	65
CO4	Understand the problem situation for higher level policy discussion on any societal and technological issues seamlessly in all domains.	TPS3	B	65

22CE1G0	FORENSIC GEOTECHNICAL ENGINEERING

Category	L	T	P	Credit
PE	1	0	0	1

Preamble

This course will create awareness on geotechnical failures, causes, remedies and rehabilitation procedures.

Prerequisite

Knowledge on foundation failures

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the importance of site investigation and soil testing	TPS3	B	65
CO2	Check the vulnerability of soils and understand the problems associated with expansive soils	TPS3	B	65
CO3	Predict settlement related problems – immediate and consolidation settlement	TPS3	B	65
CO4	Suggest appropriate ground improvement techniques	TPS3	B	65
CO5	Recommend appropriate underpinning methods	TPS3	B	65

22CE1J0	STRUCTURAL ANALYSIS AND DESIGN USING BIM SOFTWARE

Category	L	T	P	Credit
PE	-	-	2	1

Preamble

This hands-on training course work is intended to provide students with opportunities to acquire knowledge and to develop skills in STAAD Pro, STAAD Foundation and RCDC detailing software's. The course shows how to use STAAD Pro to analyse and design 2D and 3D systems. This course also introduces recommended design provisions such as IS456 and IS800 and drafting standards for students to use for properly preparing design reports and detail drawings using STAAD Pro.

Prerequisite

Knowledge on Structural analysis, Reinforced concrete design, Steel design and Foundation Design.

Course Outcomes

On the successful completion of the course students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Model 2D and 3D structures using various commands of STAAD Pro	TPS3	B	65
CO2	Analyze 2D and 3D systems and design & detail the RCC structures using STAAD Pro and RCDC/ Design of steel structures using STAAD Pro.	TPS3	B	65
CO3	Analyze and design isolated, combined and Pile foundations using STAAD - Foundation (Add-on tool in STAAD Pro.)	TPS3	B	65

Mapping with Programme Outcomes and Programme Specific Outcomes

22CE1K0	MUNICIPAL WASTEWATER TREATMENT PLANT DESIGN AND PRACTICE

Category	L	T	P	Credit
PE	1	0	0	1

Preamble

This course provides details on the different treatment stages of domestic wastewater treatment plant and provides the basic engineering of it. The design of a domestic wastewater treatment plant is explained with the help of a case study.

Prerequisite

22CE440 Wastewater Engineering

Course Outcomes

On the successful completion of the course students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the different domestic wastewater treatment technologies and reuse standards in Indian and global context.	TPS3	B	65
CO2	Develop basic engineering process design and drawings of a wastewater treatment plants required to be implemented in the field.	TPS3	B	65
CO3	Identify appropriate treatment technology for Domestic wastewater.,	TPS3	B	65

22CE1L0	INTELLECTUAL PROPERTY RIGHTS

Category	L	T	P	Credit
PE	1	0	0	1

(Common to all B.E. and B.Tech Branches)

Preamble

This course on Intellectual Property Rights is designed to create interest in students about the development, transfer and commercialization of Intellectual Property. The course gives an overview of IPR and its various forms such as Copyright, Trademarks, Patents and Designs, Trade Secrets and Geographical Indications. Also, various international treaties and legislative acts are included. The course also focuses on the IP filing process, prosecution and IP management.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Summarize the types of Intellectual Property Rights and the need of IP protection	TPS3	B	65
CO2	Describe various acts and international treaties on IPR	TPS3	B	65
CO3	Identify the patentability of an invention	TPS3	B	65
CO4	Demonstrate the IP process and IP management	TPS3	B	65

1. Out of 100 Marks, 50 Marks (Internal) will be for Mini-project/Assignments, and 50 Marks will be for End Semester Exam.

Syllabus**Introduction**

Overview of Intellectual Property Rights- Intellectual property - Need for Protecting IP- Classification of IP.

Agreements and Legislations

International Treaties, Conventions on IPR and Harmonization of various Laws- TRIPS Agreement, PCT Agreement, Patent Act of India, Patents Amendment Act (2005), Design Act, Trademark Act, Geographical Indication Act

Main forms of IP

Overview of Patents-Overview of Industrial Designs-Overview of Copyright-Overview of Trademarks-Overview of Geographical Indications-Overview of Semiconductor Integrated Circuit's Layout-Overview of Protection of Plant Varieties & Plant Breeders Rights-Trade Secrets, Confidentiality & Unfair Competition.

Patent Process and IPR Management

Process of obtaining patent – application, examination, opposition and sealing of patents, Intellectual Property Prosecution-Intellectual Property Rights & Management

Case Studies

Patents related to recent emerging fields related to Intelligent systems, Artificial Intelligence, 5G Communication, Smart building, Electric Vehicle, Smart Grid, Internet of Things, Additive Manufacturing

22CE1M0	COMPUTER AIDED URBAN WATER DISTRIBUTION NETWORK ANALYSIS

Category	L	T	P	Credit
PE	0	0	2	1

Preamble

This hands-on training course work is intended to provide students with opportunities to acquire knowledge and to develop skills in WaterGEMS software. The course enables to use WaterGEMS software for analysis and design of pipe network in water distribution system. This course also provides multiple background layer support which includes image, CAD, and GIS for interface and graphical editing.

Prerequisite

Water Supply Engineering

Course Outcomes

On the successful completion of the course students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the concepts of Water distribution system and WaterGEMS GUI	TPS3	B	65
CO2	Apply multi background layer support for Image, CAD, GIS Interface in WaterGEMS for water distribution network analysis	TPS3	B	65
CO3	Design of Water Distribution System using WaterGEMS	TPS3	B	65

Syllabus

Introduction: Water distribution system and WaterGEMS GUI; Interface and Graphical editing: Automatic element labelling through Auto CAD, Multiple background layer support, Analysis of Water distribution system using software; Hydraulic operations: Demand loading and allocation, locations and layout based water calculations; Model building and route map of analysis: Water distribution system design, Elevation extraction, and building a network, reporting results.

List of Activities with CO Mapping

Module No.	Topics	No. of hours	CO
1	Introduction to Water Supply Engineering	1	1
2	Introduction to Water Distribution system	1	1
3	Introduction to WaterGEMS Graphical User Interface	2	1
4	Stand-alone Windows interface, AutoCAD-based interface Automatic element labeling	2	1
5	Multiple background-layer support, Image, CAD, and GIS background support	2	1
6	Analysis of Water distribution system, Master Planning, Subdivision Planning	3	2
7	Pipe-length-based demand loading, Demand allocation from lump-sum geospatial data	2	2
8	Area, count, discharge, and population-based loading	2	2
9	Locations and Layout based water calculations	2	2
10	Design based on minimum velocity and maximum velocity	3	3
11	Elevation extraction from CAD drawings and surfaces, Building a Network	2	3
12	Assigning the value using the property table, Assigning the value using the Flex table, Reporting Results	2	3

22CE1N0	3D BIM USING SOFTWARE	Category	L	T	P	Credit
		PC	0	0	2	1

Preamble

The course is concerned specifically with the utilization of Building Information Modeling (BIM) technology. The aim of the course is to give students a practical, hands-on introduction to BIM and related computer-based techniques for the documentation and modeling of designed structures. The course will be focusing on the processes involved in developing a full 3D design object model, not for the purpose of visualization alone, but more importantly as a tool for understanding and documenting how a proposed building design fits together and how it will perform during use. The course will introduce students to innovative concepts and processes of Building Information Modeling (BIM), a wide range of BIM applications used in the architecture, engineering and construction (AEC) industry, and future trends of BIM developments.

Students will learn how to efficiently implement BIM to develop, coordinate and communicate design intent as well as to convey data necessary for further building analysis such as materials take off, MEP, and structures.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to:

COs	Course Outcomes Statements	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand concepts of Building Information Modeling (BIM)	TPS3	B	65
CO2	Use BIM application create a model of a building	TPS3	B	65
CO3	Use of BIM to Print and Publish the model	TPS3	B	65

22CE1P0	PAVEMENT CONSTRUCTION PRACTICES

Category	L	T	P	Credit
PE	1	0	0	1

Preamble

This course will create knowledge on the tendering process and implantation of highway projects in field, construction procedures and quality control

Prerequisite

Knowledge on Highway construction

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Enumerate the components of highway projects and tendering process	TPS3	B	65
CO2	Enumerate about the Schemes, selection process and Preparation of detailed project report and estimation	TPS3	B	65
CO3	Enumerate about the execution of highway project and quality control, Case studies on on-site problems and remedial measures	TPS3	B	65

22CE1Q0	FIRE STOPPING

Category	L	T	P	Credit
PE	1	0	0	1

Preamble

India has been going through a phase of rapid urbanization and construction technology has been developing at a faster rate. The concept of fire safety in buildings has become very vital in technology. This course aims to impart the basics of Firestopping systems in buildings. Also, this course exposes the National Building Code NBC-2016, the International Building Code IBC and the Bureau of Indian Standards on fire protection. Exposure on the fire protection types and applications of fire stop systems in buildings

Prerequisite

22CE250 - Building Materials and technology

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment level (%)
CO1	Understand the principles of a fire and smoke mechanism through case studies and Comprehend the different types of fire protection system	TPS2	B	65
CO2	Demonstrate the fire stop types and applications	TPS3	B	65
CO3	Demonstrate the rating, test standards, design, insulation and inspection.	TPS3	B	65

B.E DEGREE (Civil Engineering) PROGRAMME

- **23CE480 – INTEGRATED CAD AND BIM LABORATORY**

For the Students admitted from the academic year 2023-2024 onwards

THIAGARAJAR COLLEGE OF ENGINEERING

(A Government Aided Autonomous Institution affiliated to Anna University)

MADURAI – 625 015

Approved in 68th Academic Council Meeting held on 21.12.2024

23CE480	INTEGRATED CAD AND BIM LABORATORY	Category	L	T	P	Credit
		PCC	--	--	2	1

Preamble

This laboratory course work is intended to provide students with opportunities to acquire knowledge and to develop skills in drafting and modelling the different views of the components of the building structures using available drafting and BIM software and capable of viewing and drawing the plan, elevation and section of the different types of the building. This course shows the potential of CAD and BIM tools to plan, design, and visualize, complex building systems by merging the CAD's precise drafting and modeling capabilities with BIM's data-rich, lifecycle-oriented approach. The laboratory facilitates the development of advanced techniques that bridge traditional design practices with next-generation technological solutions.

Prerequisites

Nil

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Draw 2D drawing using basic drawing and editing commands in CAD	TPS3	A+	80
CO2	Manage the files, views, layers, and display commands in CAD	TPS3	A+	80
CO3	Create 3D Models using BIM	TPS3	A+	75
CO4	Publish and plot the drawing with annotations & Dimensioning.	TPS3	A+	80
CO5	Setting up of drawing in Layout Using the Concept of paper space & model space and specific scales.	TPS3	A+	80
CO6	Create high quality visualization/ walkthrough to communicate design intent.	TPS3	A	65

List of Experiments/Activities with CO Mapping

S.No	List of Experiments	No. of hours	Course Outcome
1	Draw a Fully panelled door / window / Partially panelled and partially glazed door / windows and show the plan, section & elevations with necessary dimensions and annotations using CAD	2	CO1,CO4
2	Draw a single room building with necessary plan section and elevations using CAD	2	CO1,CO2, CO4
3	Model a single room building with 3D walls, floors, ceiling and roofs using BIM	2	CO1, CO3, CO4
4	Draw a G+1 residential building plan with furniture arrangement showing plan, elevation and sectional views using layers in CAD	4	CO1,CO2, CO4, CO5
5	Model a G+1 residential building with plan, elevation and sectional views and create a walkthrough using BIM	2	CO1, CO3, CO6
6	Model a G+1 residential building with Furniture's, appliances and fixtures using BIM	2	CO1, CO3, CO4
7	Draw a wooden truss, King post Truss/ Queen post Truss with cross section using layers in CAD	2	CO1, CO2, CO4, CO5
8	Draw a Fink/fink fan type steel trusses – detailing with various scale – usage of paper space & model space using CAD	2	CO1, CO2, CO4
9	Draw a Dog legged staircase/ Half-turn/ Quarter-turn and its necessary views using CAD	2	CO1, CO2, CO4
10	Draw a G+1 residential building for a given plinth area and show the plan, section and elevation using CAD	2	CO1, CO4, CO5
11	Design a G+n building applying lighting, interior decor with 3D model and create a walkthrough using BIM	2	CO1, CO3, CO6

B.E DEGREE (Civil Engineering) PROGRAMME

- **22CEQG0 – Digital Project Planning and Control**
- **22CEPY0 – Sustainable Development**

For the Students admitted from the academic year 2022-2023 onwards

THIAGARAJAR COLLEGE OF ENGINEERING

(A Government Aided Autonomous Institution affiliated to Anna University)

MADURAI – 625 015

Approved in 68th Academic Council Meeting held on 21.12.2024

22CEQG0	DIGITAL PROJECT PLANNING AND CONTROL

Category	L	T	P	Credit
PSE	2	0	2	3

Preamble

Complex infrastructure projects can be managed effectively if the project managers have the means to plan and control the schedules and costs of the work required to achieve their technical performance objectives. While planning projects aspects such as resources needed for its accomplishment, its costs and duration are to be determined. These can be found by adopting the modern techniques of project management. This theory cum practical course is designed to give an exposure on planning, scheduling and control of projects using application of network techniques.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to:

COs	Course Outcome Statements	TCE Proficiency Scale	Expected Proficiency Level	Expected Attainment Level (%)
CO1	Explain the concept of projects, its process, objectives and functions of project management	TPS2	B	75
CO2	Analyze and Update Project Networks and PDN Diagrams	TPS 3	B	75
CO3	Balance the resources and forecast the project using EVM analysis	TPS 3	B	75
CO4	Extract the Graphical User Interface of Primavera	TPS 3	B	75
CO5	Analyze and update the project in Primavera	TPS 3	B	75
CO6	Balance the resource and track the project	TPS 3	B	75

Syllabus

Project Management: Definition of project, Work Break down structure, Activities and its relationship, Rules for drawing network diagram, objectives and function of project management. **Project Time Management:** Gantt Chart and its analysis, AON Diagram and its analysis, PDN Diagram and its Analysis. Critical Path Method Analysis. **Resource Management:** Types of resource- Time, Men, Material, Machinery, Money, Space. Balancing of resource- Resource Smoothing technique- Time constraint. Resource leveling technique- Resource constraint **Resource optimization:** Types of cost – Direct, Indirect and Total Cost. Variation of Cost with time. Schedule Compression Techniques- Crashing, Fast Tracking & Re-estimation- Crash time and crash cost. Optimize project cost for time and resource. **GUI of Primavera:** Primavera Installation and GUI, Creation of EPS, Project, WBS and Calendar. Defining the Relationship and mentioning the constraints of the project. **Analysis of Project in Primavera:** Levels of Schedule, Importance and aspects of schedule. Baseline Creation and Updating of Project. **Resource Balancing and Tracking:** Resource Creation and Assigning. Balancing of resource. Cost calculation of Project and Optimizing using Excel. Tracking and forecasting the project using Primavera and Excel.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	COs
1.0 Project Management:			
	Definition of project, Work Break down structure, Activities and its relationship.	1	CO1
	Rules for drawing network diagram, objectives and function of project management.	1	
2.0 Project Time Management:			
2.1	Gantt Chart and analysis,	2	CO2
2.2	AON Diagram and its analysis,.	2	
2.3	PDN Diagram and its Analysis. Critical Path Method Analysis	2	
3.0 Resource Management			
3.1	Types of resource- Time, Men, Material, Machinery, Money, Space.	2	CO3

3.2	Balancing of resource- Resource Smoothing technique- Time constraint	2	
3.3	Resource leveling technique- Resource constraint	2	
4.0 Resource optimization			
4.1	Types of cost – Direct, Indirect and Total Cost. Variation of Cost with time.	1	CO3
4.2	Schedule Compression Techniques- Crashing, Fast Tracking & Re-estimation-	3	
4.3	Crash time and crash cost. Optimize project cost for time and resource.	3	
5.0 GUI of Primavera			
5.1	Primavera Installation and GUI	1	CO4
5.2	Creation of EPS, Project, WBS		
5.3	Creation of Calendar	1	
5.4	Defining the relationship in the project and identifying the constraint of the project	1	
6.0 Analysis of Project in Primavera			
6.1	Levels of Schedule, Importance and aspects of schedule..	1	CO5
6.2	Baseline Creation, Assigning and Maintaining the Baseline of project	2	
6.3	Updating of Project- Identification of Revised critical path and duration of the project	2	
7.0 Resource Balancing and Tracking			
7.1	Creation of resource and assigning the resource to the project.	1	CO6
7.2	Identification of overallocation in resource and Balancing of resource	1	
7.3	Cost calculation of Project and Optimizing using Excel.	2	
7.4	Tracking and forecasting the project using Primavera and Excel.	2	
Total Periods		36

22CEPY0	SUSTAINABLE DEVELOPMENT

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

This course explores the principles, challenges and frameworks essential to achieve sustainability globally and locally. Covering the evolution from Millennium Development Goals (MDGs) to Sustainable Development Goals (SDGs), it examines the role of international agreements, India's National Action Plan on Climate Change (NAPCC) and global financing for SDGs. Key Engineering principles, green economy concepts, tools and certification are introduced to assess sustainability. With a focus on the role of Civil Engineers, this course also covers Environmental, Social and Governance (ESG) reporting, equipping students to lead sustainable initiatives effectively.

Prerequisite

- Nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency Level	Expected Attainment Level (%)
CO1	Understand the basics of Sustainable Development and its status, challenges and barriers	TPS2	B+	65
CO2	Familiarize Sustainable Development Goals (SDGs), Targets and Indicators	TPS3	B+	65
CO3	Understand the International protocols and commitments towards achieving Sustainability	TPS2	B+	65
CO4	Explore Sustainable strategies and Measure Sustainability through Performance indicators	TPS3	B+	65
CO5	Explore innovative and Sustainable Civil Engineering Design concepts and tools	TPS3	B+	65
CO6	Understand the structure and standards required for Environmental, Social and Governance report	TPS3	B+	65

For the Students admitted from the academic year 2022-2023 onwards

THIAGARAJAR COLLEGE OF ENGINEERING

(A Government Aided Autonomous Institution affiliated to Anna University)

MADURAI – 625 015

Approved in 68th Academic Council Meeting held on 21.12.2024

22CEGC0	GEOSPATIAL DATA PROCESSING AND PHOTOGRAMMETRY

Category	L	T	P	Credit
IE	3	0	0	3

Preamble

This course deals with the acquisition, processing and interpretation of satellite images to analyze and extract information from them using remote sensing tools, GIS and Photogrammetry. Geographical Information System (GIS) is a multidisciplinary field that has been used for data integration, analysis and decision making in fields. Photogrammetry uses imaging rather than collecting light wavelength data. It involves determining the spatial properties and dimensions of objects captured in photographic pictures. Photogrammetry is exceptionally common in applications such as measuring landforms and terrain and developing topographic maps.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level%
CO1	Appraise the types of remote sensing such as multispectral, infrared, thermal and microwave remote sensing.	TPS2	A	70
CO2	Explain and apply radiometric and geometric image enhancement operation to an image.	TPS3	A	70
CO3	Classify the pre-processed satellite image using supervised and unsupervised Classifiers.	TPS3	A	70
CO4	Describe the processing of aerial photos using photogrammetry for the map production.	TPS2	A	70
CO5	Analyze spatial and non spatial data with GIS for various application.	TPS3	A	70
CO6	Illustrate the various application of remote sensing data and suggest the type of data used for specific applications.	TPS2	A	70

Syllabus

Types of Remote Sensing: Multi spectral scanning - Infrared scanning - Thermal remote sensing: Thermal scanning, radiation principles, Data interpretation, temperature mapping. Hyper spectral scanning: satellite systems used, Image analysis techniques. Microwave sensing: Synthetic aperture radar, Radar image characteristics, Radar image interpretation, LIDAR remote sensing. **Satellite Image Enhancement:** Image Georeferencing - Radiometric Enhancement: Histogram Based Enhancements, Density Slicing, Stretching. Geometric Enhancement: Neighborhood Operations, Template Operators. **Satellite data Classification:** Supervised Classification: Minimum Distance to means – Parallelepiped – Maximum Likelihood – Support Vector Machine. Unsupervised Classification: k - means Classifier. **Photogrammetry:** Introduction - Basic Geometric Characteristics of Aerial Photographs - Photographic Scale - Ground Coverage of Aerial photographs - Area Measurement – Relief Displacement of vertical features – Image parallax – Ground Control for Aerial Photography – Determining the elements of Exterior orientation of Aerial Photographs – Production of Mapping Products from Aerial Photographs - Flight Planning. **GIS:** Definition of GIS– Components of GIS – Data : Spatial and Non-spatial – Spatial Data: Point, Line Polygon – Non-spatial Data: Levels of Measurement – Database Structures - digitization – Raster Data Model – Vector Data Model – Topology – Raster Vs. Vector Comparison – File Formats for Raster and Vector – Vector to Raster Conversion. **Application of Remote sensing:** Landuse/land cover mapping - Geological and soil mapping - Agricultural applications - Forestry applications - Water resource applications - Urban and Regional planning applications - Environment assessment and protection - natural Disaster assessment - principles of Landform Identification and evaluation -Change detection studies.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Periods
1	Types of Remote Sensing	
1.1	Multi spectral scanning, Infrared scanning	1
1.2	Thermal remote sensing: Thermal scanning, radiation principles, Data interpretation, temperature mapping.	1
1.3	Hyper spectral scanning: satellite systems used, Image analysis techniques.	1
1.4	Microwave sensing: Synthetic aperture radar, Radar image characteristics, Radar image interpretation, LIDAR remote sensing	1
2	Satellite Image Enhancement	
2.1	Image Georeferencing	1
2.2	Radiometric Enhancement: Histogram Based Enhancements,	1
2.3	Density Slicing, Stretching.	1
2.4	Geometric Enhancement: Neighbourhood Operations	1
2.5	Template Operators	1
3	Satellite data Classification	
3.1	Supervised Classification: Minimum Distance to means	1
3.2	Parallelepiped	1
3.3	Maximum Likelihood	1
3.4	Support Vector Machine.	1
3.5	Unsupervised Classification: k - means Classifier	1
	Assignment 1- Satellite data classification using ENVI software	
4	Photogrammetry	
4.1	Introduction - Basic Geometric Characteristics of Aerial Photographs	1
4.2	Photographic Scale	1
4.3	Ground Coverage of Aerial photographs	1
4.4	Area Measurement	1
4.5	Relief Displacement of vertical features – Image parallax	1
4.6	Ground Control for Aerial Photography – Determining the elements of Exterior orientation of Aerial Photographs.	1
4.7	Production of Mapping Products from Aerial Photographs	1
4.8	Flight Planning	1
5	GIS	
5.1	Definition of GIS - Components of GIS – Data : Spatial and Non-spatial	1
5.2	Spatial Data: Point, Line, Polygon	1
5.3	Non-spatial Data: Levels of Measurement – Database Structures digitization –	1
5.4	Raster Data Model – Vector Data Model	1
5.5	Topology – Raster Vs. Vector Comparison	1
5.6	File Formats for Raster and Vector	1
5.7	Vector to Raster Conversion	1
	Assignment 2- GIS project using QGIS software	
6	Application of Remote sensing	
6.1	Landuse/land cover mapping, Geological and soil mapping	1
6.2	Agricultural applications, Forestry applications	1
6.3	Water resource applications	1
6.4	Urban and Regional planning applications	1
6.5	Environment assessment and protection, natural Disaster	1

	assessment	
6.6	principles of Landform Identification and evaluation	1
6.7	Change detection studies	1

B.E DEGREE (Civil Engineering) PROGRAMME

- **22CE631 – Highway and Railway Engineering**
- **22CE681 – Analysis and Design Laboratory**

For the Students admitted from the academic year 2022-2023 onwards

THIAGARAJAR COLLEGE OF ENGINEERING
(A Government Aided Autonomous Institution affiliated to Anna University)

MADURAI – 625 015

Approved in 68th Academic Council Meeting held on 21.12.2024

22CE631	HIGHWAY AND RAILWAY ENGINEERING

Category	L	T	P	Credit
PCC	3	0	0	3

Preamble

The course aims to make the students learn the principles of highways planning, geometric design and design of pavement structural elements. Further, students will get acquainted with the surface and structural evaluation and maintenance of pavements. This also imparts the student's knowledge on basics of the railway Engineering.

Prerequisite

Fundamentals of highway and railway Engineering

Course Outcomes

On the successful completion of the course students will be able to

	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the highway planning and cross-sectional elements.	TPS2	B	65
CO2	Apply the geometric characteristics while designing highway alignment.	TPS3	B	65
CO3	Apply the concepts of stresses and strains on flexible pavement design.	TPS3	B	65
CO4	Understand the concepts of designing Flexible and rigid pavement according to IRC specification.	TPS2	B	65
CO5	Understand pavement materials, construction and maintenance.	TPS2	B	65
CO6	Apply the basic components and geometric elements while designing and laying railway track.	TPS3	B	65

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	Course Outcome
1.0	Highway Planning and Cross-Sectional Element		
1.1	Road development in Indian- Roads in ancient India - First, second and third Twenty - year plan.	1	CO1
1.2	Jakayar Committee recommendation- Central Road fund, CRRI, Highway Research Board,	1	
1.3	Classification of roads and its patterns, Highway alignment Factors controlling Highway alignment - Obligatory points- Engineering surveys - Conventional and Modern methods	1	
1.4	Highway Cross-sectional Element-Right of way, camber, carriage way, Kerb, Shoulders.	1	
2.0	Highway Geometric Design Elements		
2.1	Sight Distance-Factors controlling Sight distance - PIEV Theory - Stopping sight distance (Theory and Problems).	1	CO2
2.2	Overtaking sight distance (Theory and problem) - Sight distance at intersection	1	
2.3	Horizontal alignment - Super elevation (Derivation and Problem) - Extra Widening (Derivation and Problems) - Transition curve (Problem)	2	
2.4	Vertical Alignment - Summit and Valley curve (Problems).	1	
3.0	Pavement Design		
3.1	Pavement Components and its functions - Flexible and Rigid – Factors Controlling the design of pavement.	1	CO3
3.2	Flexible pavement - Stresses and strains in flexible pavement-Layered system - Two-layer system -Vertical stress (Theory and Problems).	2	
3.3	Vertical surface deflection - Vertical interface deflection (Theory and Problems).	1	
3.4	Critical tensile strain - Single wheel and dual Wheel (Theory and Problems).	1	
3.5	Three layered system - Jone's Table (Theory and Problems).	1	

3.6	Flexible Pavement design (IRC 37-2018).	3	CO4
3.7	Rigid pavement design (IRC 58-2015).	2	
3.8	Pavement Design Tools - IIT Pave.	1	
4.0	Highway Materials, Construction and maintenance.		
4.1	Materials - Aggregate Properties and Tests - Crushing, abrasion, Stone polishing test, Impact, Stripping, flakiness and elongation tests.	1	CO5
4.2	Bitumen- Properties and test - Penetration, viscosity, flash and fire point, Softening point and Ductility, Marshall method of mix design, Gyratory compaction.	1	
4.3	Pavement Construction procedure - Concrete pavements (IRC 15-2017) - Flexible Pavement construction – WMM, BC and DBM (MORTH specification), Highway drainage and its types.	2	
4.4	Maintenance - Types - Flexible and Rigid Pavement - types of failures, causes and treatment. Pavement Evaluation - Surface Evaluation-Pavement serviceability Index (IRC Code).	1	
4.5	Structural Evaluation - Falling Weight Deflectometer (IRC code) and Benkelman Beam-Principles and procedure.	2	
5.0	Railway Engineering		
5.1	Role of Railways in National development, Permanent way – its Components and Functions.	1	CO6
5.2	Coning of wheels - advantages and disadvantages, Stresses in track, Ballastless track.	1	
5.3	Gradients and its types - super elevation - can't deficiency - Negative super elevation (Problems).	1	
5.4	Points and crossings.	1	
5.5	Railway Stations and marshalling yards -requirements and its types.	1	
5.6	Signalling -Engineering principles - Classification based on locations and functions.	1	
5.7	Control of movement of trains.	1	
5.8	Level Crossings - Interlocking - Track Circuiting.	1	
	Total Hours	36 Hrs

22CE681	ANALYSIS AND DESIGN LABORATORY

Category	L	T	P	Credit
PCC	-	-	2	1

Preamble

This Laboratory is intended to provide students with opportunities to acquire knowledge and to develop skills in Analysis and Design software. The course shows how to use Analysis and Design software to analyse and design 2D and 3D systems. This course also introduces recommended design provisions such as IS456, IS800 and detailing standard (SP34) for students to use for properly preparing design reports and detail drawings using Analysis and Design software.

Prerequisite

22CE320 - Mechanics of Solids, 22CE420- Structural analysis, 22CE520 - Design of steel Elements, 22CE620 – Design of Reinforced Concrete Elements

Course Outcomes

On the successful completion of the course students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Model 2D and 3D structures using software.	TPS3	B+	70
CO2	Analyze statically indeterminate beams for the given loads and generate appropriate report	TPS3	B+	70
CO3	Analyze multistory and multi bay rigid frames for given loads and generate appropriate report.	TPS3	B+	70
CO4	Analyze and design a G+2 RCC framed structure under Dead Load, Live Load and Wind Load and generate appropriate report	TPS3	B+	65
CO5	Analyze and design steel truss for given loads and generate appropriate report	TPS3	B+	65
CO6	Design foundation using software and spreadsheets and generate appropriate report and detailing	TPS3	B+	65

Mapping with Programme Outcomes and Programme Specific Outcomes

List of Experiments/Activities with CO Mapping

Module No.	List of Experiments	No. of Hours	COs
1.	To create model of 2D statically determinate and indeterminate beams with different spans and various loading conditions	2	CO1
2.	To create model of 2D portal frames with different spans and heights and various loading conditions	2	CO1
3.	To analyse 2D beams with different loads and to generate analysis reports and diagrams	2	CO2
4.	To analyse 2D frames with different loads and to generate analysis reports and diagrams	2	CO2
5.	To analyse 3D RCC frame for given Dead Loads, Live loads including Floor loads & load combinations and to generate analysis reports and diagrams	2	CO3
6.	To analyse 3D RCC frame for given Dead Loads, Live loads, Lateral load & load combinations and to generate analysis reports and diagrams	2	CO3
7.	To Model G+2 RCC frame for the given plan, to do load calculations and to apply dead load, live load and lateral loads	2	CO4
8.	To analyse and to perform design of G+2 RCC frame for the given plan	2	CO4
9.	To model pitched roof truss for the given configuration and to calculate and to apply dead load, live load and lateral loads	2	CO5
10.	To analyse and design pitched roof truss and to generate design report and drawings.	2	CO5
11.	To design foundation using software from the analysis and design output for the given load combinations	2	CO6
12.	To design foundation using spread sheet	2	CO6

MADURAI – 625 015

22CEPZ0	DYNAMICS OF STRUCTURES	Category	L	T	P	Credit
		PSE	3	0	0	3

Preamble

This course introduces the fundamental concepts of vibration theory, beginning with single-degree-of-freedom systems and progressing to multi-degree-of-freedom. Analytical and numerical techniques are emphasized to develop a deep understanding of structural response characteristics. By the end of the course, students will not only gain strong theoretical insights but also develop the capability to apply dynamic analysis in research and advanced structural design.

Prerequisite

Fundamentals of Mathematics, Knowledge of basic Science.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Apply the vibration principle to single degree of freedom with free vibration.	TPS 3	B	65
CO2	Apply the vibration principle to single degree of freedom forced vibration with harmonic excitation.	TPS 3	B	65
CO3	Apply the vibration principle to two degree of freedom with free vibration.	TPS 3	B	65
CO4	Apply the vibration principle to two degree of freedom forced vibration with harmonic excitation.	TPS 3	B	65
CO5	Apply the vibration principle to Multi degree of freedom with free and forced vibration.	TPS 3	B	65
CO6	Apply the principle of vibration to the sub structure design.	TPS 3	B	65

Syllabus

Introduction to vibration and Damping: Simple Harmonic motion-Longitudinal Vibrations Equation of motion- SDOF analysis-Undamped SDOFs- dynamic equation of motion-D'Alemberts principle- equivalent stiffness-Springs connected in series and parallel- frequency and period Amplitude of motion- Energy method for the equation of motion- Damped SDOFs- underdamped and overdamped -Damped SDOFs- critically damped Logarithmic decrement ,method of determining damping. **Forced vibration of single degree of freedom system:** Undamped harmonic excitation. Damped harmonic excitation- Evaluation of damping at resonance-Response to support motion Torsional vibration- Dynamic Magnification Factor. **Two degrees of freedom:** Principle modes of vibration and equation of motion for two degree of freedom-Two degrees of freedom for torsional system- Vibrations of undamped Two degrees of freedom-Forced Vibrations-Undamped forced vibration for two degrees of freedom -Orthogonality Principle. **Multi degree of freedom system:** Equation of motion of multi degree of freedom-Stiffness, mass and damping matrices. Influence Coefficient-Eigen vector normalisations, problems-Modal co-ordinates. Introduction of modal analysis-Matrix Method –Rayleigh Method – Holzer Method - Dunkerleys method -Natural frequencies and mode shapes-Modal analysis – damped undamped free vibration. **Vibration Analyse in Sub Structure-** Base Isolation and design of bearings- Machine foundation- types, basic and design criteria- MSD Method of analysis- EHS Method of Analysis- Tschebotarioff's reduced frequency method- design problems.

Course Contents and Lecture Schedule

S.NO	TOPICS	PERIOD
1. Introduction to vibration and Damping		
1.1	Free vibration of single degree of freedom systems, Simple Harmonic motion	1
1.2	Longitudinal Vibrations Equation of motion, SDOF analysis	1
1.3	Undamped SDOFs- dynamic equation of motion with electrical equivalent	1
1.4	Newtons law of motion, D'Alemberts principle- equivalent stiffness	1
1.5	Springs are connected in series and parallel, frequency and period, problems	1
1.6	Amplitude of motion, Energy method for the equation of motion	1
1.7	Damped SDOFs- underdamped, overdamped and critically damped	1
1.8	Logarithmic decrement ,method of determining damping	2
2. Forced Vibration of Single Degree of Freedom		
2.1	Forced vibration of single degree of freedom system	1
2.2	Undamped harmonic excitation	1

2.3	Damped harmonic excitation with electrical equivalent	1
2.4	Response to support motion Torsional vibration and Dynamic Magnification Factor	1
2.5	Impulsive loading problems using Fourier series	2
2.6	Forced vibration problems using Laplace transform method	1
2.7	Numerical evaluation of Duhamel's integral for damped system	2
3. Two Degree of Freedom		
3.1	Two degrees of freedom	1
3.2	Principle modes of vibration and equation of motion for two degree of freedom	1
3.3	Two degrees of freedom for torsional system, Vibrations of undamped Two degrees of freedom	2
3.4	Forced Vibrations and Undamped forced vibration for two degrees of freedom	1
4. Multi Degree of Freedom		
4.3	Stiffness, mass, damping matrices and Influence Coefficient	1
4.4	Modal analysis – damped undamped free vibration	2
4.5	Matrix Method and Matrix Iteration Method	1
4.6	Dunkerleys , Stodola's , Rayleigh's and Holzer Method	1
4.8	Dynamic analysis method to evaluate lateral forces, Static and dynamic condensation	2
5.Vibration Analyse in Sub Structure		
5.1	Base Isolation and design of bearings	1
5.2	Machine foundation- types, basic and design criteria	1
5.3	MSD Method of analysis	1

22CESA0	EARTHQUAKE RESISTANT DESIGN OF STRUCTURES

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

One of the major destructive forces that damage the Infra structure is earthquake. Therefore the structures in earthquake prone areas need to be designed to resist this unpredictable natural force. Earthquake-resistant design of structures has grown into a true multi disciplinary field of engineering wherein many exciting developments are possible in the near future. This subject introduces the concepts of seismic-resistant design and provides minimum standards for use in building design to maintain public safety in an extreme earthquake. Further methods of analysis and determinant internal forces in structural members due to earthquake the approximate design, detailing are introduced

Prerequisite

Dynamics of structures

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the potential deficiencies in RC and masonry buildings and seismology	TPS 2	B	65
CO2	Apply the principle of vibration to evaluate lateral seismic forces by seismic coefficient and dynamic analysis	TPS 3	B	65
CO3	Apply the codal provisions to design structural elements as per IS13920 codal provisions	TPS 3	B	65
CO4	Apply the procedure to assess the hazard potential using DSHA ,PSHA and vulnerability assessment of building by pushover analysis	TPS 3	B	65
CO5	Apply the codal provisions to assess liquefaction potential for the given site condition under seismic loading condition	TPS 3	B	65
CO6	Apply the principle of vibration to understand the concept of seismic displacement, velocity and acceleration measurement	TPS 3	B	65

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	Course Outcome
1.0	Introduction and Components of PEB		
1.1	Introduction – History – Advantages of PEB – Applications of PEB-	1	CO1
1.2	Materials used for manufacturing of PEB- Conventional Steel Buildings and Pre-Engineered Buildings; Primary System – Main frames, Gable End frame- Secondary frame system:	2	
1.2.1	Size and properties of Purlin, Girts – Bracing system: Rod, angle, portal, pipe bracing-		
1.3	Sheeting and Cladding; Roof and Wall sheeting- Accessories; Turbo Ventilators, Ridge vents, Skylights, Louvers, Insulation, Staircases.	1	
2.0	Load Effects and PEB Analysis		

2.1	Analysis of PEB frame under the influence of Dead, Live, Collateral, Wind, Seismic, snow and other applicable loads.	2	CO2
2.2	Codes of Indian Standards (IS) and Metal Building Manufacturers Association (MBMA).	22	
2.3	Analysis of Gable frames	2	
3.0	Design of Secondary Members		CO3
3.1	Pannels – Skin Panels and Tempcon Panel	1	
3.2	Cold formed cross section properties	1	
3.3	Design of Roof Purlin	2	
3.4	Design of Wall Girts	1	
3.5	Design of Eave Struts	1	
3.6	Drainage and calculation of Downspout – Natural Lightning – Ventilation	2	
4.0	Design of Primary PEB Members:		CO4
4.1	Design of Main frame design-	2	
4.2	Design of Jack beam	2	
4.3	Design of Flange brace	2	
4.4	Design of Rigid frame connection – Knee Connections –	2	
5.0	Design of Bracing and EWC		CO5
5.1	Design of End-wall Column	2	
5.2	Bracing System Design – X Bracing	2	
5.3	Design of Portal Bracing	2	
6.0	Software Application for the Design of PEB		CO6
6.1	2D and 3D modelling of Portal frames – Optimization Techniques – Comparison output with manual calculation	2	
6.2	Design of Cold formed section – Purlins and Girts	2	
Total Hrs.		36

22CESC0	Lean Construction

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

Lean Construction is an essential shift from conventional construction management. Lean approach seeks to improve project delivery by minimizing waste and maximizing value to the customer. This course has been intended to impart the key concepts, tools, and practices to improve the construction processes.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to:

COs	Course Outcome Statements	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Compare the concepts of Lean Production and Lean construction systems	TPS 2	A	75
CO2	Classify wastes in construction and apply lean techniques for waste reduction.	TPS 3	A	75
CO3	Apply Integrated Project Delivery principles in construction projects	TPS 3	A	75
CO4	Apply Collaborative planning techniques in construction projects	TPS 3	A	75
CO5	Apply various lean tools for planning, measuring the performances to ensure continuous improvement in construction projects	TPS 3	B	65
CO6	Summarize the importance of workplace organization, need for using Games for implementing lean concepts	TPS 3	B	65

Syllabus

Introduction to contracts in construction industry: Brief details of Engineering contracts – definition, types and essentials of contracts and clauses for contracts – Preparation of tender and contract documents – prequalification, bidding, accepting, evaluation of tender form – technical, contractual and commercial point of view and standard contract documents – International contract document, World bank procedures and guidelines, Law of Torts – Issues related to tendering process- Awarding contract, e-tendering process - Time of performance – provisions of contract law – Breach of contract. Performance of Contracts – Discharge of a contract- Indian Contract Act 1872 – Risk management in contracts. **Laws related to Construction Industry** – Labour and industrial laws - payment of wages act, contract labour – Workmen’s compensation act – Insurance and safety regulations, Industrial dispute act, Indian factory act, Child labour act and other labour laws. **Alternate Dispute resolution** – Litigation in Indian courts, Dispute resolution mechanism under the Indian judicial System. **Arbitration, Negotiation, Mediation and Conciliation** – concepts and purpose, Statutory back ground ADR and mediation rules, duties of mediator and disclose facts, power of court in mediation, Case studies, Duties of conciliator and negotiator. **Arbitration of Engineering Contracts** – Background of Arbitration in India, The Arbitration and conciliation Act 1996, UNCITRAL model law, Forms of arbitration – arbitration agreement, subject matter and violations, Commencement of arbitral proceedings, constitution of arbitral tribunal, appointment of arbitrator and rules of evidence, Institutional procedure of arbitration, Independence of arbitrators jurisdiction of arbitral tribunal, Interim measures, Enforcement of awards and cost.

Course Contents and Lecture Schedule :

Module No.	Topics	No. of Hours	Course Outcome
1.	Lean–Evolution		
1.1	Introduction – Lean Production - background and lean thinking.	2	CO1
1.2	Toyota Production System. Lean production philosophy	1	
1.3	Introduction to Lean Construction. Difference between Lean Production and Lean Construction.	2	
2.	Introduction to Lean construction		
2.1	Lean Construction –Overview and Definition, Value Proposition	2	CO2
2.2	Waste in Construction, Terminologies in lean Construction	3	
3.0	Concept of IPD and lean		
3.1	Concepts of Integrated Project Delivery	2	CO3
3.2	Value stream mapping for construction processes, case studies	3	
3.3	Minimizing waste - value - add edvs. non-value added activities	2	
3.4	Integrated Project Delivery, Case study discussions	2	
4.0	Lean Tools		
4.1	Collaborative Planning – Master Planning, Make Ready Schedule. Production Planning Tools for Collaborative Planning	3	CO4
4.2	Measuring Performances – Plan Percent Complete - PPC	2	
5.0	Other Lean Tools:		
5.1	Workflow, Visual Management, 5S,	2	CO5
5.2	Just - In - Time, Cycle time analysis	2	
5.3	Constraint Analysis and solution through A3 sheets, Continuous improvement	2	
5.4	Case study discussions	2	
6.0	Lean culture in organization		
6.1	Building Lean Culture in an Organization,	2	CO6
6.2	Human resources and managing change in organization, Team building and training	2	
	Total Periods	36	

Course Designers :1. Dr.G.Chitra gcciv@tce.edu

22CESD0	FORMWORK DESIGN	Category	L	T	P	Credit
		PSE	3	0	0	3

Preamble

To disseminate knowledge about detailed planning, design and erection of formwork for various elements such as slabs, beams, columns, walls, shells and tunnels

Prerequisite

Building Construction technology, Design of Reinforced Concrete Elements, Design of Steel Elements

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the Planning of site equipment and plant for formwork	TPS2	B+	65
CO2	Apply the design concepts of formwork	TPS3	B+	65
CO3	Design the Horizontal and Vertical formwork members	TPS3	B+	65
CO4	Apply the knowledge of forms for the quantity take- off and cost calculation	TPS3	B+	65
CO5	Apply the knowledge of formwork supports for its design and erection	TPS3	B+	65
CO6	Apply the knowledge of formwork design for Special structures	TPS3	B+	65

22CESE0	BUILDING PLANNING AND SERVICES

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

This course introduces fundamental principles of building layout, space utilization, and functional design, aligned with national codes and standards. Additionally, it covers essential building services such as water supply, sanitation, drainage, lighting, ventilation, fire safety, and vertical transportation systems. Emphasis is placed on sustainability, efficiency, and user comfort.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Describe the fundamental principles of building planning for different types of buildings.	TPS2	B+	65
CO2	Comprehend the electrical& lighting systems of a building including the design aspects associated with their performance.	TPS3	B+	65
CO3	Apply the principles of water supply and drainage, and design considerations for plumbing systems in buildings.	TPS3	B+	65
CO4	Incorporate the systems for air-conditioning, fire safety, and mobility in building design.	TPS3	B+	65
CO5	Explain the principles of smart systems and Plan buildings with sustainability features.	TPS2	B+	65
CO6	Adapt the principles of building automation and Propose acoustic treatments in achieving occupant comfort in built environment.	TPS3	B+	65

Syllabus

Introduction to Building Planning: Definition and importance of Building services- Overview of National Building Code of India - Selection of site and space planning principles Planning Process and planning regulations-Human factors and ergonomics in design-Orientation of buildings and climate-responsive design.

Electrification and Lighting: Electrical Distribution & safety systems in buildings-Electrical circuitry- internal wiring and types of earthing-Electrical loads- peak demand and Renewable energy resources calculation- Lighting principles- luminance and glare, lighting systems and types of luminaires- Energy conservation in lighting - Energy efficient luminaires-Lighting Design- Minimum level of illumination required for different types activities in building.

Water supply and sanitation Services: Distribution and storage of water in Buildings-Building and site planning for water drainage and sewage disposal-Plumbing networks-sanitary fixtures and fittings, dual-Plumbing systems- General methods applicable for wastewater treatment- Systems and components for storm water drainage and design of rain water harvesting system- Measures for effective water management –NetZero approach.

HVAC, Mechanised Mobility & Fire safety: Basic principles of Ventilation- Necessity and Systems of Ventilation-Principles and components of mechanical ventilation and air-conditioning systems-Essentials of Air conditioning systems-Concepts of fire safety and security Planning considerations for fire protection- firefighting installations in buildings-Kinetic systems -Elevators and Escalators.

Smart systems and sustainable strategies: Human machine interface and intelligent systems-Safety and surveillance systems-Information technology-based facilities-intercom, Wi- fi- Role of Building Services in Indoor Air Quality-Sustainable strategies in building services.

Building Automation and Acoustics: Basic concepts of sound and acoustics-Site planning for noise control-Design software tools used in Building Services-Concept and application of Automation Systems in buildings-Case studies of building services in real-life buildings.

22CESF0	CLIMATE CHANGE ADAPTATION AND MITIGATION

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

This course on Climate Change Adaptation and Mitigation provides a comprehensive understanding of the atmospheric system, climate parameters and the mechanisms driving global climate change. The course emphasizes both the causes and effects of climate change at global and regional scales, encouraging a multidisciplinary approach to vulnerability assessment and impact analysis. A key focus is placed on mitigation and adaptation strategies, guided by the Intergovernmental Panel on Climate Change (IPCC) technical guidelines.

Prerequisite

- Nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency Level	Expected Attainment Level
CO1	Describe atmospheric processes, weather, climate parameters and global circulation.	TPS2	B+	65
CO2	Identify greenhouse gases and carbon emissions from industrial, transport, residential and commercial sectors.	TPS2	B+	65
CO3	Illustrate climate change impacts on ecosystems, human health, infrastructure and socioeconomic sectors.	TPS3	B+	65
CO4	Understand IPCC guidelines to identify and implement effective climate adaptation strategies through cutting edge themes, tools and framework.	TPS2	B+	65
CO5	Implement climate change adaptation measures including albedo management, green infrastructure and energy efficiency strategies.	TPS3	B+	65
CO6	Use renewable energy sources and mitigation techniques for reducing climate change impacts.	TPS3	B+	65

Syllabus

Introduction Structure and composition of the atmosphere - weather and Climate - Climate parameters – Temperature, Rainfall, Humidity, Wind - Global ocean circulation, El Nino and its effect - Carbon cycle
Elements Related To Climate Change Greenhouse gases - Total carbon dioxide emissions by energy sector - industrial, commercial, transportation, residential - Impacts - air quality, hydrology, green space - Causes of global and regional climate change - Changes in patterns of temperature, precipitation and sea level rise - Greenhouse effect
Impacts Of Climate Change Effects of Climate Changes on living things - health effects, malnutrition, human migration socioeconomic impacts - tourism, industry and business, vulnerability assessment - infrastructure, population and sector-Agriculture, forestry, human health, coastal areas
Mitigating Climate Change IPCC Technical Guidelines for Assessing Climate

Change Impact and Adaptation - Cross-Cutting Themes Emphasized - Tools and Frameworks Referenced - Identifying adaption options - designing and implementing adaption measures - surface albedo environment - reflective roofing and reflective paving - enhancement of evapotranspiration - tree planting programme - green roofing strategies - energy conservation in buildings - Carbon sequestration - Carbon Capture and Storage (CCS) **Alternate Fuels and Renewable Energy** Energy sources – coal, natural gas (Conventional) - wind energy, hydropower, solar energy, nuclear energy, geothermal energy, biofuels (Renewable) - Energy policies for climate mitigation - Energy auditing: concepts and methods.

22CESG0	CONSTRUCTION EQUIPMENT MANAGEMENT

Category	L	T	P	Credit
PSE	2	1	0	3

Preamble

Selection of appropriate equipment based on the requirements of project is crucial for completion of project at optimal cost and time. The mistakes during selection of equipment for any construction can be avoided by scheduling and optimizing the construction equipment system productivity and making proper equipment financing decisions. This can be accomplished by understanding cost and life of equipment and its maintenance

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to:

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Select an appropriate equipment for a specific purpose	TPS3	B	70
CO2	Estimate various cost components of equipment for different specifications	TPS3	B	70
CO3	Adapt suitable financing methods by considering equipment replacement strategies	TPS3	B	70
CO4	Select the optimum productive equipment among available specifications	TPS3	B	70
CO5	Apply the concept of scheduling for horizontal and vertical construction projects	TPS3	B	70
CO6	Explain the methodology of equipment maintenance program.	TPS2	B	70

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1	Introduction		
1.1	Role of Heavy Equipment in Construction-Earthmoving Equipment Selection - Bulldozers, Front-end Loaders, Scrapers, Trucks	1	CO1
1.2	Excavating Equipment Selection-Excavators, Backhoes, Front shovels	1	
1.3	Lifting Equipment Selection- Cranes and Forklifts	1	
1.4	Other Equipment-Piles and Pile Driving Equipment, Production of Crushed-stone Aggregate, Concreting Equipment, Asphalt Mix Production and Placement Equipment.	1	
2	Ownership and Operating cost of equipment		
2.1	Ownership cost–depreciation cost	1	
	Tutorials	2	

2.2	Cost of operating construction equipment	1	CO2
	Tutorials	2	
2.3	Other methods- Corps of engineers, AGC, Peurifoy	1	
3	Equipment Life and Replacement Procedures		
3.1	Equipment life–Physical life, Profit life and Economic life	1	
3.2	Replacement Analysis-Theoretical methods, Practical methods, and sensitivity analysis	1	CO3
3.3	Replacement equipments election	1	
4	Equipment Financing Decisions		
4.1	Fundamental concepts of equipment economics	1	CO4
4.2	Financing Methods- Buy, rent and lease	1	
	Tutorials	2	
5	Optimizing Construction Equipment Productivity		
5.1	Peurifoy's & Phelps Method	1	
	Tutorials	2	
5.2	Load growth curve	1	
	Tutorials	2	
5.3	Stochastic Methods	1	
6	Scheduling Equipment Intensive projects		
6.1	Horizontal Construction Projects- Linear scheduling method, Precedence diagramming method	3	CO5
	Tutorials	2	
6.2	Vertical Construction Projects- lifting for high rise work, Erection-dismantling, concrete placing cranes	2	
7	Construction Equipment Maintenance		
7.1	Need for a maintenance program	2	CO6
7.2	Designing a Maintenance Program	2	
	Total Hours	36

22CESH0	CLASSICAL METHODS OF STRUCTURAL ANALYSIS	Category	L	T	P	Credit
		PSE	2	1	0	3

Preamble

This course offers the various classical methods of analysis for indeterminate beams, Portal frames and Trusses. It aims at determination of end moments and constructing shear force and bending moment diagrams for the beams and frames and also member forces in pin-jointed trusses using Strain Energy, Matrix methods and finite differences.

Prerequisite

Fundamentals of Engineering Mechanics, Mechanics of Solids and Structural Analysis

Course Outcomes

On the successful completion of the course students will be able to

	Course Outcome Statement	TCE Proficiency Scale	Attainment level	Proficiency level
CO1	Analyse propped cantilever, fixed beam and frames by Strain Energy method.	TPS3	B+	65
CO2	Analyse beams and frames by Matrix Flexibility method	TPS3	B+	65
CO3	Analyse beams and frames by Matrix Displacement method	TPS3	B+	65
CO4	Analyse pin-jointed trusses by Matrix Stiffness method	TPS3	B+	65
CO5	Analyse beams by Direct Stiffness method	TPS3	B+	65
CO6	Analyse beams by Finite Difference method	TPS3	B+	65

22CETA0	RESOURCES AND ENERGY RECOVERY FROM WASTE	Category	L	T	P	Credit
		PEES	3	0	0	3

Preamble

This course provides a comprehensive understanding of mechanical, biological, biochemical and thermo-chemical waste processing technologies for material recycling and energy recovery. It covers the principles, design criteria and operation of key systems such as composting, anaerobic digesters, incinerators and advanced thermal processes. The course also includes case studies on various recycling technologies to highlight practical applications. Emphasis is placed on environmental sustainability, emission control, and decentralized solutions. Students will gain critical knowledge to design, analyze and implement integrated waste-to-resource and energy recovery systems.

Prerequisite

- Nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency Level	Expected Attainment Level
CO1	Understand mechanical processing techniques for waste recycling and resource recovery systems.	TPS2	B+	65
CO2	Identify biological waste processing methods, composting systems and vermiculture applications.	TPS2	B+	65
CO3	Evaluate biochemical conversion processes and design principles of anaerobic digesters.	TPS3	B+	65
CO4	Apply thermo-chemical conversion technologies for energy recovery from various waste types through incinerators	TPS3	B+	65
CO5	Identify alternative thermal waste-to-energy technologies, their design, control and environmental integration.	TPS2	B+	65
CO6	Use recycling technologies for diverse waste streams through relevant industrial case studies.	TPS3	B+	65

Approved in 69th Academic council meeting held on 28.06.2025

22CE2A0	STRUCTURAL DESIGN OF BRIDGES

Category	L	T	P	C
PE	2	0	0	2

Preamble

Bridges represent critical infrastructure, demanding precision-driven design methodologies and advanced analytical techniques to ensure safety, longevity, and performance. This industry-supported two-credit course is designed to bridge the gap between academic fundamentals and practical industry applications, equipping participants with expertise in structural design using software.

Prerequisite

22CE220 - Engineering Mechanics, 22CE320 - Mechanics of Solids, 22CE420 - Structural Analysis

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency (Grade)	Expected Attainment Level %
CO1	Gain knowledge of bridge types, key components, and IRC 5 classifications, ensuring a solid foundation in bridge engineering principles.	TPS2	B	65
CO2	Analyze IRC 6 load specifications, including superimposed dead loads, live loads, braking effects, earth pressures, strain ratcheting, thermal and wind load effects, to assess bridge performance.	TPS3	B	60
CO3	Design box culverts and slab bridges based on MORTH specifications, implementing load dispersion techniques.	TPS3	B	60
CO4	Perform transverse analysis of T-girder and box girder structures.	TPS3	B	60

B.E DEGREE (Civil Engineering) PROGRAMME

- ***22CE521 - Design of steel elements (Program Core Course)***
- ***22CE632 - Highway and Railway Engineering (Program Core Course)***
- ***22CE641 - Accounting and Finance (Humanities and Social Sciences including Management Course)***
- ***22CERF1 - Design of Steel Structures (Program Electives for Expanded Scope)***

For the Students admitted from the academic year 2023-2024 onwards

THIAGARAJAR COLLEGE OF ENGINEERING

(A Government Aided Autonomous Institution affiliated to Anna University)

MADURAI – 625 015

Approved in 69th Academic council meeting held on 28.06.2025

22CE521	DESIGN OF STEEL ELEMENTS

Category	L	T	P	Credit
PCC	2	1	0	3

Preamble

The primary concern of an engineer is design. Structural design consists of conceptualisation, idealisation, analysis, design, construction and maintenance. Conceptualisation is required to arrive at the final shape and size of the structure. Idealisation involves reducing the conceived structure into primary elements. By analysis, internal forces like bending moments, shear, torsion, compression and tension in every element are determined. Design assigns every element a particular material and size. Construction involves putting all the elements together to perform like the originally conceived structure. Maintenance is needed to keep the performance of the structure without deterioration.

In this course, the exposure to IS:800 code provisions, design of tension members, design of bolted and welded connections, compression members, beam and column bases made of steel are dealt with. Further, the elements are designed for internal forces like tension, compression, bending moment and shear.

Prerequisite

22CE220-Engineering Mechanics, 22CE320-Mechanics of Solids

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency (Grade)	Expected Attainment Level %
CO1	Understand and apply Limit States philosophy, load considerations, and load combinations as per IS 800 provisions, along with an overview of the mechanical properties, section classifications, and detailing of structural steel sections.	TPS2	B	65
CO2	Analyze and design steel tension members in accordance with IS 800 code provisions, optimizing load-carrying capacity while ensuring structural efficiency.	TPS3	B	60
CO3	Evaluate and implement force transfer mechanisms in bearing-type and HSFG-type bolted connections, adhering to IS 800 standards to achieve reliable structural performance.	TPS3	B	60
CO4	Assess and design welded connections, applying IS 800 guidelines to enhance joint efficiency and ensure proper force transmission.	TPS3	B	60
CO5	Determine axial load capacity and select appropriate cross-section	TPS3	B	60

	configurations for compression members, including angle struts, built-up sections, and bases, in line with IS 800 specifications.			
CO6	Interpret and apply IS 800 provisions in evaluating the strength and stability of flexural members, considering both supported and unsupported conditions to ensure structural adequacy.	TPS3	B	60

*Assignment I,II – Quiz/Case analysis/Problem-solving/Presentation/Writing Task

Syllabus

Introduction of Structural steel types, Mechanical Properties of structural steel, Indian structural steel products. **Design Philosophy of steel structures:** Introduction, Working stress method, Limit State Method, Classification of cross sections, IS800:2007 related provisions. **Tension members:** Behaviour, Design of plate and angle tension members, design of built-up tension Members, Connections in tension members, and Use of lug angles. **Bolted connection:**

Connection types, Introduction to riveted connections, Force transfer mechanism of bearing type & HSFG bolts, failure mechanism, Design, direct tension, compression, a moment in plane of the bolt, moment perpendicular to the bolt, Design of Slip critical connections **Welded connection:** Type of welds, joints, the strength of welds, Design, direct tension, on plates and angles, moment in plane of the weld, moment perpendicular to the weld. **Compression members:** Type of Column sections, Design, rolled steel section, built-up section, laced and battened columns, Angle struts. **Column base:** Slab base and gusseted base. **Flexure members:** Behaviour – Introduction to Plastic Analysis, Design, simple and compound beams, laterally restrained, laterally unrestrained, Factors affecting lateral stability, Shear Strength, Web Buckling, Crippling and deflection of Beams.

Indian Standard Codes

1. IS: 800 – 2007, Code of Practice for general construction in steel, BIS, New Delhi
2. SP 6 (1) – Structural steel sections, BIS, New Delhi
3. IS: 816 - 1969, Code of practice for use of metal arc welding for general construction in mild steel.
4. IS: 808 – 1989 Dimensions for Hot Rolled Steel Beam, Column, Channel and Angle Sections.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Hours	Course Outcome
1.0	Introduction of Structural Steel		
1.1	Mechanical Properties of Structural Steel	1	CO1
1.2	Structural steel types – Indian structural steel products.	1	
1.3	Design Philosophy of steel structures: Introduction – Working stress method – Limit state method	1	
1.4	Limit States: Strength & Serviceability and Partial safety factors for loads and materials as per IS 800 provisions	1	
1.5	Classification of cross sections- IS800:2007 related provisions.	1	
2.0	Tension Members:		
2.1	Behaviour and Code Provisions	1	CO2
2.2	Design of plate under tension – Lap connection	1	
2.3	Design of plate under tension – Butt connection	1	
2.4	Design of angle tension members.	1	
2.5	Design of Built-Up Tension Members	1	

2.6	Connections in tension members – Use of lug angles.	1	
3.0	Bolted connection:		
3.1	Connection types & Code provisions	1	CO3
3.2	Introduction to riveted connections.	1	
3.3	Force transfer mechanism of bearing-type bolts- failure mechanism and its code provisions	1	
3.4	Design of bolted connection - direct tension – compression.	1	
3.5	Design of bolted connection - moment in-plane of the bolt	1	
3.6	Design of bolted connection - moment out-of-plane to the bolt	1	
3.7	Behaviour of HSFG bolts and	1	
3.8	Design of Slip Critical Connections	1	
4.0	Welded connection:		
4.1	Type of welds, joints, Behaviour and its code provisions	1	CO4
4.2	The strength of welds- Fillet, Groove and slotted	1	
4.3	Design of weld in the direction of tension or compression	1	
4.4	Design of welded connection – the moment in the plane of the weld	1	
4.5	Design of welded connection - moment perpendicular to the weld	1	
5.0	Compression members:		
5.1	Type of Column sections	1	CO5
5.2	Design of a rolled steel column	1	
5.3	Design of Angle struts.	1	
5.4	Design of an angle loaded along one leg	1	
5.4	Design of built-up column - laced columns.	1	
5.5	Design of built-up column - battened columns.	1	
5.6	Column base: Design of Slab base.	1	
5.7	Design of gusseted base.	1	
6.1	Flexure members:		
6.1	Behaviour – Introduction to Plastic Analysis - Design of simple and compound beams and their code provisions	1	CO6
6.2	Design of Laterally restrained beams	1	
6.3	Shear Strength-Web Buckling, Crippling and Deflection of Beams.	1	
6.4	Behaviour of laterally unsupported beam – Lateral Torsional Buckling behaviour	1	
6.5	Design of Laterally unrestrained beams - Factors affecting lateral stability	1	
	Total Hrs.	36

22CE632	HIGHWAY AND RAILWAY ENGINEERING

Category	L	T	P	Credit
PCC	3	0	0	3

Preamble

The course aims to make the students learn the principles of highways planning, geometric design and design of pavement structural elements. Further, students will get acquainted with the surface and structural evaluation and maintenance of pavements. This also imparts the student's knowledge on basics of the railway Engineering.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Attainment level	Expected Proficiency level
CO1	Understand the highway planning and cross-sectional elements.	TPS2	B	65
CO2	Apply the geometric characteristics while designing highway alignment.	TPS3	B	65
CO3	Apply the basic concept of on designing the flexible pavement and understand the basic concept of designing rigid pavement according to IRC standards	TPS3	B	65
CO4	Understand the basics of pavement materials and pavement Construction Procedure.	TPS2	B	65
CO5	Understand the basics of Pavement Evaluation and pavement maintenance.	TPS2	B	65
CO6	Apply the basic components and geometric elements while designing and laying railway track.	TPS3	B	65

Syllabus

Highway Planning and Cross Section Elements; Road development in Indian- First, second and third Twenty-year plan, Jayakar Committee recommendation - Central Road fund, CRRI, Highway Research Board, Classification of roads and its patterns, Highway alignment- Factors controlling Highway alignment - Engineering surveys - Conventional and Modern methods. Highway Cross-section Element - Right of way, camber, carriage way, Kerb, Shoulders. **Highway Geometric Design;** Sight Distance - Factors controlling Sight distance - PIEV Theory - Stopping sight distance - Overtaking sight distance - Sight distance at intersection, Horizontal alignment - Super elevation - Extra Widening - Transition curve, Vertical Alignment - Summit and Valley curve. **Pavement Design;** Pavement Components and its functions-Flexible and Rigid – Factors Controlling the design of pavement, Flexible pavement - Concept of Stresses and strains in flexible pavement (Concept only). Flexible Pavement design Procedure (IRC 37 - 2018) – Pavement design - pavement section with bituminous layer(s), granular base and GSB (Problem), Rigid pavement design Procedure (IRC 58-2015) – Concept only, Pavement Design Tools (Introduction) - IIT Pave. **Highway Materials and Construction procedure;** Materials-Aggregate Properties and Tests – Crushing, abrasion, Impact, Stripping, flakiness and elongation, Bitumen -Properties and tests – Penetration, viscosity, flash and fire point, Softening point, Ductility, solubility test, Loss on Heat test, Marshall method of mix design, Waste Plastics in Hot Bituminous mix (IRC-SP 98-2013). Pavement Construction procedure - Concrete pavements (IRC 15-2017) - Flexible Pavement construction – WMM, BC and DBM (MORTH specification), Highway drainage and its types. **Pavement Evaluation and Maintenance:** Pavement Maintenance and its types, Flexible Pavement - types of failures, causes and treatment, Rigid

Pavement - types of failures, causes and treatment, Surface Evaluation - Pavement serviceability Index (IRC Code), Skid resistance, Roughness, Structural Evaluation Pavement - Structural Evaluation- Falling Weight Deflectometer and Benkelman Beam - Principles and procedure. **Railway Engineering;** Role of Indian Railways in National development. Permanent way – its Components and Functions - Coning of wheels - advantages and disadvantages. Gradients and its types - super elevation - can't deficiency - Negative super elevation (Problems), Points and crossings, Railway Stations - requirements and its types, Marshalling Yards and its types - Signalling -Engineering principles - Classification based on locations and functions –Control of movement of trains - Level Crossings - Interlocking – Track Circuiting.

8. MORTH, Specification for Road and Bridge works, Indian Roads Congress, 5th Revision, 2013.
9. IRC 82-2015; Code of practice for maintenance of bituminous road surface.
10. IRC SP 98 -2013; Guidelines for the use of Waste Plastic in Hot Bituminous Mix (Dry Process) in wearing Course.

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	Course Outcome
1.0	Highway Planning and Cross-Sectional Element		
1.1	Road development in Indian- Roads in ancient India -First, second and third Twenty - year plan.	2	CO1
1.2	Jayakar Committee recommendation- Central Road fund, CRRI, Highway Research Board,	1	
1.3	Classification of roads and its patterns, Highway alignment Factors controlling Highway alignment -Obligatory points- Engineering surveys - Conventional and Modern methods	1	
1.4	Highway Cross-sectional Element-Right of way, camber, carriage way, Kerb, Shoulders.	1	
2.0	Highway Geometric Design Elements		
2.1	Sight Distance-Factors controlling Sight distance - PIEV Theory - Stopping sight distance (Problem).	1	CO2
2.2	Overtaking sight distance (problem) - Sight distance at intersection	2	

2.3	Horizontal alignment - Super elevation (Derivation and Problem) - Extra Widening (Derivation and Problem) - Transition curve (Problem)	2	
2.4	Vertical Alignment - Summit and Valley curve (Problem).	2	
3.0	Pavement Design		
3.1	Flexible Pavement and Rigid pavement Components and its functions.	1	CO3
3.2	Factors Controlling the design of pavement - ESWAL, Tyre pressure, traffic, axle load and traffic etc.,	1	
3.3	Stresses and strains in flexible pavement (Concept only)	1	
3.4	Flexible Pavement design Procedure (IRC 37-2018), Pavement section with bituminous layer(s), granular base and GSB.	1	
3.5	Rigid pavement design (IRC 58-2015) - Concept only	1	
3.6	Pavement Design Tools - IIT Pave.	1	
4.0	Highway Materials and Construction		
4.1	Materials - Aggregate Properties and Tests - Crushing, abrasion, Stone polishing test, Impact, Stripping, flakiness and elongation tests.	1	CO4
4.2	Bitumen- Properties and test - Penetration, viscosity, flash and fire point, Softening point and Ductility,	1	
4.3	Pavement Construction procedure - Concrete pavements (IRC 15-2017), Waste Plastics in Hot Bituminous mix (IRC-SP 98-2013).	2	
4.4	Flexible Pavement construction – WMM, BC and DBM (MORTH specification),	1	
4.5	Highway drainage and its types.	1	
5.0	Pavement Evaluation and Maintenance		
5.1	Pavement Maintenance and its types, Pavement Maintenance - Types - Flexible Pavement - types of failures, causes and treatment.	1	CO5
5.2	Rigid Pavement - types of failures, causes and treatment.	1	
5.3	Pavement Surface Evaluation - Pavement serviceability Index and Rating (IRC 82 - 2015).	1	
5.4	Structural Evaluation - Falling Weight Deflectometer (IRC code) and Benkelman Beam-Principles and procedure.	1	
6.0	Railway Engineering		
6.1	Role of Railways in National development, Permanent way – its Components and Functions.	1	CO6
6.2	Coning of wheels - advantages and disadvantages.	1	
6.3	Gradients and its types – Equilibrium speed (Problem) super elevation (Problem) - Can't deficiency - Negative super elevation (Problems).	1	
6.4	Points and crossings.	1	

6.5	Railway Stations and marshalling yards -requirements and its types.	1	
6.6	Signalling -Engineering principles - Classification based on locations and functions.	1	
6.7	Control of movement of trains.	1	
6.8	Level Crossings - Interlocking - Track Circuiting.	1

22CE641	ACCOUNTING AND FINANCE

Category	L	T	P	Credit
HSMC	2	1	0	3

Preamble

Engineering profession involves lots of decision making. The decisions may range from operation to non-operation. For taking decisions of these kinds, an engineer needs among other data about the organization routine operations and non-routine operations. Accounting is a science which provides all the data by recording, classifying, summarizing and interpreting the various transactions taking place in an organization and there by helps an engineer in taking vital decisions in an effective manner. Finance is an allied but a separate field relying on accounting and enables engineers in taking useful financial and cost related decisions by providing well defined concepts, tools and techniques.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course, students will be able to:

Cos	Course Outcome	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Prepare financial statements of accounting and study them with common size statements and comparative statements.	TPS3	B	65
CO2	Perform cost sheet, depreciation and its applications in business.	TPS 3	B	65
CO3	Compute various types of budgets in an organization	TPS 3	B	65
CO4	Practice break-even analysis and activity-based costing systems for a business application.	TPS 3	B	65
CO5	Compute capital budgeting and working capital investment decisions.	TPS 3	B	65
CO6	Apply the appropriate sources of finance and mobilize the right quantum of finance and use them in most profitable investment avenues.	TPS 2	B	65

Syllabus

Accounting Introduction definition, functions of accounting, accounting principles. Preparation of financial statements and study them with common size and comparative statements. **Cost Accounting** - Meaning and importance - Elements of cost - classification of cost -Cost Centre, Preparation of cost sheet and its applications. Depreciation— meaning and causes of depreciation, Methods to find out the depreciation. **Budget and Budgetary control**-Introduction- Meaning -objectives of budgetary control —Budget-Types of budgets and their preparation. **Marginal costing**-Introduction, Break even analysis—Managerial of break even analysis. Activity based Costing. **Capital budgeting**-Meaning and features, capital budgeting decisions, Methods of evaluating capital budgeting decisions by traditional and modern methods. Working capital management - concept, classification, Estimation of working capital requirements. **Finance**: Functions, Objectives of financial management and Source of finance and financial institutions, Venture capital. Analysis Case Studies: Cost management in the construction industry. (Only for assignment)

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	COs
1.0 Project and its process			
1.1	Introduction, Definition, Functions of accounting	1	CO1
1.2	Accounting principles	1	
1.3	Preparation of Financial statements	3	
1.4	Common size statement analysis	1	
1.5	Comparative statement analysis	1	
2.0 Cost Accounting			
2.1	Meaning, importance and Elements of cost	1	CO2
2.2	classification of cost and meaning of Cost centre,	1	
2.3	Preparation of Cost sheet and its applications	3	
2.4	Depreciation — meaning and causes of depreciation	1	
2.5	Methods to find out the depreciation	2	
3.0 Budget and Budgetary control			
3.1	Introduction- Meaning -objectives of budgetary control	1	CO3
3.2	Budget- Types of budgets and their preparation	4	
4.0 Marginal costing			
4.1	Introduction, Breakeven analysis	2	CO4
4.2	Managerial uses of breakeven analysis.	1	
4.3	Activity Based Costing	2	
5.0 Capital budgeting			
5.1	Meaning and features, capital budgeting decisions	1	CO5
5.2	Methods of evaluating capital budgeting decisions by traditional and modern methods	4	
5.3	Working capital management - concept, classification,	1	
5.4	Estimation of working capital requirements.	1	
6.0 Finance			
6.1	Functions and Objectives of Financial Management	1	CO6
6.2	Source of Finance and financial Institution	2	
6.3	Venture Capital	1

22CERF1	DESIGN OF STEEL STRUCTURES

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

This course offers the design of steel structures as per the limit state method. This course follows the recommendation of IS: 800. It aims at determination of safe as well as economical steel components such as plate girders, gantry girders, and beam-columns. This course also expose the student to IS: 875 – Part 1, 2 & 3 provisions for various load calculations. The design of roof truss using rolled sections as per IS: 800 covered in this course.

Prerequisite

22CE220-Engineering Mechanics, 22CE320-Mechanics of Solids, 22CE520-Design of Steel Elements

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency (Grade)	Expected Attainment Level %
CO1	Design a Plate girder for its moment & shear and check the adequacy of the end panel using the IS: 800 Provisions.	TPS3	B	65
CO2	Design of Longitudinal and transverse Stiffeners for the Plate girder.	TPS3	B	65
CO3	Analyze and design a gantry girder for its maximum load effects and fatigue effects.	TPS3	B	70
CO4	Evaluate the capacity of the column subjected to combined axial compression and bending moment.	TPS3	B	65
CO5	Calculate all the possible loads on the roof truss and its load combinations	TPS3	B	70
CO6	Design the purlins & roof truss members using rolled steel sections.	TPS3	B	65

Syllabus

Plate girder- Introduction to Plate girder, Difference between beam and plate girder, Design of welded plate girder, Proportioning of web and flange plates, Design of mid-section, Curtailment of flange plates, **Design of Stiffeners** - shear behaviour of transversely unstiffened and stiffened web, web subjected to co-existent bending and shear, transverse web stiffener, Bearing stiffener, end bearing stiffener and load bearing stiffener, Longitudinal web stiffener, Flange plate to a web connection, Splices - Flange and web. **Gantry girder:** Introduction, load considerations, max load effects, Fatigue effects, Determination of maximum bending moment and shear force due to vertical component of crane wheel load, the horizontal component of crane wheel load, longitudinal effect of wheel load, Design of gantry girder, Connection in gantry girder. **Beam–Column:** Introduction, behaviour of beam-column, second order moment in beam-column, Elastic torsional buckling of beam columns, Nominal strength in beam column in uniaxial bending, Biaxial bending. **Industrial structures:** Pitched roof truss configuration such as Fink & Fink fan, Howe, Pratt, etc. Introduction to loads on truss using IS875 – Part-1 ,2 ,3, Possible Load combinations, Estimation of design dead load, live load, wind load on Roof and walls with the use of spreadsheets. Review of analysis of truss. **Design of Truss using Rolled steel sections:**

Purlin design using rolled steel sections, Design of truss member against tension and compression, design of Support.-

Course Contents and Lecture Schedule

Module No.	Topic	No. of Lectures	Course Outcome
1.0	Plate girder		CO1
1.1	Introduction to Plate girder – Difference between beam and plate girder & IS 800-2007.	1	
1.2	Design of welded plate girder	2	
1.2.1	Proportioning of web and flange plates – Design of mid-section		
1.3	Curtailment of flange plates	1	
2.0	Design of Stiffener		CO2
2.1	shear behaviour of transversely unstiffened and stiffened web	2	
2.2	web subjected to co-existent bending and shear	2	
2.3	transverse web stiffener – Bearing stiffener	2	
2.4	End-bearing stiffener and load-bearing stiffener	1	
2.5	Longitudinal web stiffener	1	
2.6	Flange plate to web connection	1	
2.7	Splices - Flange and web	1	
3.0	Gantry girder		CO3

3.1	Introduction and load considerations	1	
3.2	Maximum load effects and Fatigue effects		
3.3	Determination of maximum bending moment and shear force due to vertical component of crane wheel load	1	
3.4	Determination of maximum bending moment and shear force due to horizontal component of crane wheel load and longitudinal effect of wheel load	1	
3.5	Design of gantry girder	1	
3.6	Connection in gantry girder	1	
4.0	Beam-Column		CO4
4.1	Introduction to the behavior of Beam-column and IS 800:2007	1	
4.2	Second-order moment in beam-column	2	
4.3	Elastic torsional buckling of beam-columns		
4.4	Nominal strength in beam-column in uniaxial bending	1	
4.5	Nominal strength in beam-column in biaxial bending	2	
5.0	Industrial structures:		CO5
5.1	Pitched roof truss configuration, Fink & Fink fan truss.	1	
5.2	Introduction to loads on truss using IS875 – Part-1 ,2 ,3, Possible Load combinations,	2	
5.3	Estimation of design dead load, live load, and wind load on Roof and walls use of spreadsheets. Review of analysis of truss.	2	
6.0	Design of Truss using Rolled steel sections		CO6
6.1	Purlin design using rolled steel sections	2	
6.2	Design of truss member against tension and compression.	2	
6.3	Design of supports	2	
	Total Hrs.	36

B.E DEGREE (Civil Engineering) PROGRAMME

- ***22CE421 - Structural Analysis (Program Core Course)***
- ***22CEPR1 - Basics of Remote Sensing (Program Specific Elective)***
- ***22CEPS1 - Ground Water Management (Program Specific Elective)***

For the Students admitted from the academic year 2024-2025 onwards

THIAGARAJAR COLLEGE OF ENGINEERING

(A Government Aided Autonomous Institution affiliated to Anna University)

MADURAI – 625 015

Approved in 69th Academic council meeting held on 28.06.2025

22CE421	STRUCTURAL ANALYSIS	Category	L	T	P	Credit
		PCC	2	1	0	3

Preamble

This course offers the various methods of analysis for indeterminate beams and portal frames. It aims at determination of end moments and constructing shear force and bending moment diagrams for the beams and frames. Also, ILD for indeterminate beams will be dealt with.

Prerequisite

Fundamentals of Engineering Mechanics and Mechanics of Solids.

Course Outcomes

On the successful completion of the course students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Attainment level	Proficiency level
CO1	Construct ILD for indeterminate beams.	TPS3	B+	65
CO2	Compute deflection of beams and rigid frames by strain energy method.	TPS3	B+	65
CO3	Analyse propped cantilever, fixed beams and continuous beams using theorem of three moments.	TPS3	B+	65
CO4	Analyse beams and frames by slope deflection method.	TPS3	B+	65
CO5	Analyse beams and frames by moment distribution method.	TPS3	B+	65
CO6	Perform plastic analysis of beams and frames.	TPS3	B+	65

*** Weightage depends on Bloom's Level, Number of Contact Hours.

Syllabus

ILD for indeterminate beams: Muller Breslau's principle – Influence line diagrams for propped cantilever and continuous beams for propped cantilever and continuous beams. **Strain Energy Method:** Introduction–Strain energy due to bending–Deflection by strain energy, virtual work, unit load method – Application to beam deflection – Castigliano's Theorem I – Maxwell's Theorem of Reciprocal Deflection. **Theorem of Three Moments:** Clapeyron's theorem of three moments - Analysis of continuous beams. **Slope Deflection Method:** Derivation of slope deflection equation – Analysis of continuous beams. **Moment Distribution Method:** Stiffness – carry over factor – distribution factor - Analysis of continuous beams – Analysis of portal frames with and without side sway (single storey and single bay). **Plastic Analysis:** Introduction – Assumptions – Elastic-Plastic Bending – Shaper Factor and Plastic Section Modulus- Plastic Analysis – Types of Mechanisms – Fundamental Theorems of Plastic Analysis – Mechanism Method – Equilibrium Method – Beams and Frames.

22CEPR1	BASICS OF REMOTE SENSING

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

The objective of this course is to provide knowledge on remote sensing of objects on the earth surface using EMR waves with its object response spectral characteristics. This course also highlights the types of platforms like satellites used for remote sensing with image processing techniques and multi-level data integration through GPS for real world applications.

Prerequisite

Fundamental of Physics, Mathematics, Geography, Geology and Surveying

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected attainment level in %
CO1	Understand the fundamentals of radiation and its characteristics.	TPS2	B+	65
CO2	Understand various EMR interaction with atmosphere and various earth objects.	TPS2	B+	65
CO3	Understand the process of data acquisition, storage and analysis.	TPS2	B+	65
CO4	Apply knowledge of remote sensing platforms and characteristics in image retrieval.	TPS3	B+	65
CO5	Apply knowledge of satellites on various Civil Engineering applications.	TPS3	B+	65
CO6	Apply knowledge of GPS and its integration in real time scenarios.	TPS3	B+	65

22CEPS1	GROUND WATER MANAGEMENT

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

The objective of this course is to introduce the principles, methods and practices of well hydraulics and concept of ground water management. It also emphasizes the need for protecting ground water resources from contamination and Planning of groundwater development under various conditions and constraints.

Prerequisite

Nil.

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency scale	Expected Proficiency	Expected Attainment Level %
CO1	Explain the origin and occurrence of groundwater	TPS2	B+	65
CO2	Plan and develop ground water resources	TPS3	B+	65
CO3	Understand the properties and types of aquifers	TPS2	B+	65
CO4	Estimate the yield from aquifers through pumping test	TPS3	B+	65
CO5	Apply the artificial Recharge techniques	TPS3	B+	65
CO6	Formulate Strategies to control the ground water pollution	TPS3	B+	65

Syllabus

Ground water Occurrence: Origin of ground water, hydrologic cycle, rock properties effecting ground water, vertical distribution of ground water, zone of aeration and zone of saturation. **Planning of Ground water Development:** Water balance, assessment of recharge, utilizable recharge, Indian practices, constraints on ground water development, feasibility check, optimal ground water developments, planning of ground water development in canal command areas, planning of ground water development in coastal aquifers. **Aquifers:** Geologic formation, types, porosity, Specific yield and Specific retention. **Analysis of Pumping Test :** Steady ground water flow towards a well in confined and unconfined aquifers, Dupit's and Theim's equations, Cooper and Jacob Method. **Artificial Recharge of Ground Water:** Concept of artificial recharge, Recharge methods, Relative merits, Application of GIS and Remote sensing in Artificial Recharge of Ground Water. **Control of Ground Water Pollution Hazards:** Evaluation of pollution hazard and water supply pollution hazards. Strategies for control of ground water pollution. Mounting Ground Water Quality Protection Programs.

Learning Resources

1. Ground water Hydrology by David Keith Todd, John Wiley & son, New York, Third revised edition (2005)
2. Groundwater by H.M. Raghunath, Wiley Eastern Ltd. (1 December 2007)
3. Groundwater system planning & management- R. Willies & W.W.G. Yeh, Printice Hall (1987).
4. Apply Hydrogeology by C.W. Fetta, CBS Publishers & Distributers (2019).

B.E DEGREE (Civil Engineering) PROGRAMME

- ***25CEL20 - Programming in C (Engineering Science Course)***

**For the Lateral Entry Students admitted from the academic year
2025-2026 onwards**

THIAGARAJAR COLLEGE OF ENGINEERING

(A Government Aided Autonomous Institution affiliated to Anna University)

MADURAI – 625 015

Approved in 69th Academic council meeting held on 28.06.2025

25CEL20	PROGRAMMING IN C

Category	L	T	P	Credit
ESC	3	0	0	3

(For Lateral Entry Students only)

Preamble

In the modern era of Civil Engineering, computational skills are becoming increasingly essential for efficient analysis, design and project management. This course is designed to introduce students with the fundamentals of programming using the C language that is widely used in the Engineering domain. It also enables students to write, debug and implement C programs which can serve as the building blocks for more advanced computational techniques and software used in Civil Engineering practices.

Prerequisite

- Nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency Level	Expected Attainment Level
CO1	Understand the fundamental concepts of programming and the structure of a C program using flowcharts and pseudocode.	TPS2	B+	65
CO2	Apply basic concepts of C such as data types, input/output operations, operators and expressions to develop simple programs.	TPS3	B+	65
CO3	Implement control structures like sequence, selection and iteration to develop logical solutions for given problems.	TPS3	B+	65
CO4	Utilize arrays and strings, including their declaration, initialization and manipulation, for effective data handling in programs.	TPS3	B+	65
CO5	Develop programs using functions and pointers, including recursive approaches and pointer operations with arrays and functions.	TPS3	B+	65

CO6	Apply searching (linear and binary) and sorting (bubble and selection) algorithms and organize data using user-defined structures.	TPS3	B+	65

Syllabus

Introduction to C Programming: Introduction to Programming and its need- Structure of a C program – Flowcharts & Pseudo codes - Data types: need and its application - Input/output Statements - Operators and Expressions. **Control Structures:** Control Structures – Sequence, Selection, Iteration - Importance and application of Control Structures. **Array and String:** Introduction to Arrays: Declaration, Initialization – One dimensional array – Two-dimensional array - String basics: Character arrays and string handling functions. **Functions**

and Pointers: Functions: Declaration, types, calling, Parameter passing - Recursion – Pointers: Declaration, initialization, Pointers with arrays and functions. **Searching and Sorting Algorithms:** Searching Algorithms - Linear search, Binary search - Sorting Algorithms - Bubble sort, Selection sort. **Structures:** Defining and declaring structures - Nested structures - Arrays of structures.

22CE1R0	ARTIFICIAL INTELLIGENCE IN CIVIL ENGINEERING	Category	L	T	P	Credit
		PE	1	0	0	1

Preamble

The course introduces students to the fundamentals of Artificial Intelligence (AI) and Machine Learning (ML) with a focus on their transformative impact on civil engineering practice. It provides an overview of AI concepts such as regression, classification, clustering, and generative modeling, followed by domain-specific applications including structural damage detection, predictive maintenance, and traffic flow optimization. Through hands-on demonstrations, mini-projects, and workshops, students gain practical exposure to tools like scikit-learn and open-source AI platforms for integrating BIM, GIS and sensor data. The course also emphasizes ethical AI practices, generative design and the future role of robotics in engineering innovation, enabling learners to conceptualize and propose AI-based solutions for real-world civil engineering challenges.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

22CE1S0	STRUCTURAL SOFTWARE APPLICATIONS IN BRIDGE DESIGN

Category	L	T	P	Credit
PE	1	0	0	1

Preamble

This course is designed to equip students with both foundational and advanced competencies in bridge and infrastructure design using MIDAS Civil. Through a structured progression from geometric modeling to code-compliant design and analysis, learners will gain hands-on experience in structural modeling, load applications, and design validation. Emphasis is placed on IRC standards, BIM integration, and emerging trends in sustainability and digital workflows. By the end of the course, students will be proficient in applying MIDAS Civil to real-world bridge engineering scenarios.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency (Grade)	Expected Attainment Level %
CO1	Apply the features of MIDAS Civil to create, migrate, and manage bridge modelling projects, including geometric definitions, material properties.	TPS3	B	65
CO2	Demonstrate the boundary conditions and analyse the structure under various load cases - static, moving, and thermal and evaluate design compliance with IRC codes	TPS3	B	60
CO3	Design bridge components and substructures using MIDAS Civil, integrating BIM workflows, sustainability considerations.	TPS3	B	60

*Assignment – Quiz/Case analysis/Problem-solving/Presentation/Writing Task

Syllabus

Introduction to MIDAS Civil – Software architecture - installation procedures, project creation - data migration, and the definition of model entities and attributes. **Geometric modeling and property definition** - model structural elements - nodes, beams, and plates - perform element extrusion, assign section properties, and define materials like concrete and steel. **Boundary conditions and load definitions** - application of supports - axis orientation, spring settings, and various load types such as static, moving, wind, temperature. **Bridge-Codes & Code compliance** - emphasizing IRC 6 and IRC 112 moving load configurations - temperature and shrinkage effects, and codal load combinations – **Analysis and Design** - RCC T-Girder Superstructure – Analysis and Design - ULS and SLS checks. Advanced analysis techniques - deformation, force, and reaction - Modeling of piers, pile and raft foundations - review real-world case studies and the latest updates in MIDAS Civil. BIM integration, documentation workflows, and automated report generation.

22CE1T0	GROUNDWATER FLOW AND TRANSPORT MODELLING

Category	L	T	P	Credit
PE	1	0	0	1

Preamble

This course is designed to provide students with both theoretical knowledge and practical experience in simulating groundwater flow and solute transport processes using advanced numerical modelling techniques. It introduces learners with the fundamentals of groundwater engineering and the finite element method, followed by step-by-step training in model development using FEFLOW. By integrating scientific principles with computational tools, this course aims to build professional competence in groundwater system assessment, environmental impact evaluation and sustainable water resource management.

Prerequisite

Nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcomes	TCE Proficiency Scale	Expected Proficiency	Expected Attainment level (%)
CO1	Understand the fundamental principles of groundwater flow, aquifer properties and governing equations relevant to subsurface hydrogeology.	TPS2	B+	65
CO2	Develop and configure finite element models in FEFLOW by defining mesh structures, boundary conditions, and hydraulic parameters for groundwater flow simulation.	TPS3	B+	65
CO3	Apply FEFLOW software tools to simulate and visualize groundwater flow and solute transport processes for practical hydrogeological problem-solving.	TPS3	B+	65

Course Contents and Lecture Schedule

No.	Topic	No. of Hours	Course Outcomes
1. Introduction to FEFLOW and Its Applications			
1.1	Overview of FEFLOW software and interface	02	CO1
1.2	Key features and capabilities		CO1
1.3	Application areas in hydrogeology and environmental modelling		CO1
1.4	Understanding project and data structure		CO1
2. Groundwater Engineering Fundamentals			
2.1	Aquifer types and flow regimes (confined, unconfined, leaky)	02	CO1
2.2	Hydrogeological properties (hydraulic conductivity, transmissivity, storativity)		CO1
2.3	Governing equations of groundwater flow		CO1
2.4	Darcy's Law, boundary conditions, and model assumptions		CO1
3. Finite Element Modelling and Mesh Design			
3.1	Concept of finite element method in groundwater modelling	03	CO2
3.2	Mesh creation and quality assessment in FEFLOW		CO2
3.3	Defining initial and boundary conditions		CO2
3.4	Model configuration and setup		CO2

4. Hands-on 2D Flow Simulation in FEFLOW			
4.1	Steady-state confined aquifer simulation	02	CO3
4.2	Visualization of head distribution and flow vectors		CO3
4.3	Capture zone and velocity field analysis		CO3
4.4	Result interpretation		CO3
5. Introduction to Solute Transport Modelling			
5.1	Mass transport mechanisms: advection, dispersion, and reaction	03	CO3
5.2	Contaminant source definition and boundary setup		CO3
5.3	Simulating plume movement in FEFLOW		CO3
5.4	Visualization and interpretation of transport results		CO3
Total		12 Hours

22CESJ0	RAINWATER HARVESTING

Category	L	T	P	Credit
PSE	3	0	0	3

Preamble

Water scarcity has become a critical issue worldwide due to rapid urbanization, population growth and changing climate patterns. Sustainable management of water resources through Rainwater Harvesting (RWH) offers a viable solution to meet domestic, agricultural and industrial water demands. This course introduces students to the fundamentals, methods, design principles and management aspects of RWH systems. It also emphasizes the integration of traditional wisdom and modern engineering practices to achieve water sustainability.

Prerequisite

- Nil

Course Outcomes

On the successful completion of the course, students will be able to

COs	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency Level	Expected Attainment Level
CO1	Explain the basic concepts, sources of water and the need for water conservation along with the legal and policy framework for rainwater harvesting.	TPS2	B+	65
CO2	Illustrate the hydrological processes and estimate rooftop and surface runoff for RWH planning.	TPS3	B+	65
CO3	Identify and compare various traditional and modern methods of rainwater harvesting and artificial groundwater recharge.	TPS3	B+	65
CO4	Design simple rainwater harvesting and recharge structures.	TPS3	B+	65
CO5	Understand the operational difficulties in RWH systems and the strategies for their evaluation, modernization and maintenance.	TPS2	B+	65
CO6	Discuss real-life case studies of RWH implementation and assess their efficiency and sustainability in different contexts.	TPS2	B+	65

Syllabus

BASICS OF RAINWATER HARVESTING - Water and its sources - Need for water conservation - Types of water demand - Conservation Methods - Global and Indian perspectives - National mission and goals towards rainwater harvesting – SDG & Water Harvesting-National water policy - Legislation on rainwater harvesting in India and Tamil Nadu. **HYDROLOGY AND GROUNDWATER** - Hydrological cycle - Precipitation - Rainfall measurement - Rain-gauges - Hyetograph - Infiltration - Runoff estimation - Rooftop runoff estimation. Ground water - Aquifer Properties - Darcy law and well hydraulics - Steady flow. **METHODS OF RAINWATER HARVESTING** - Rainwater harvesting potential of an area - Traditional harvesting practices - Rooftop harvesting - Methods of RWH structures - Site selection for rainwater harvesting - Surface runoff Harvesting - Ground water recharge - Artificial recharge. **DESIGN OF RAINWATER HARVESTING STRUCTURES** - Design Considerations - Components of Rainwater harvesting system - Simple roof water collection system - Design of Storage structure - Design of Recharge structures - Recharge pit - Recharge trench - Recharge well - Gully plug - Contour bund - Percolation pond - Check dam - Recharge shaft - Efficiency of RWH system. **MANAGEMENT OF RWH AND CASE STUDIES** - Difficulties in RWH - At catchment level - At household level - Evaluation of RWH systems - Maintenance of RWH structures - Modernization of RWH system - Case studies on best practice of RWH in urban - Success stories of Contemporary practices of RWH in India.

Course Contents and Lecture Schedule

No.	Topic	No. of Hours	Course Outcome
1	BASICS OF RAINWATER HARVESTING		
1.1	Introduction – Water and its sources	01	CO1
1.2	Need for water conservation and sustainability	01	CO1
1.3	Types of water demand – Domestic, Industrial, Agricultural	01	CO1
1.4	Water conservation methods	01	CO1
1.5	Global and Indian perspectives on RWH - SDG & Water Harvesting	01	CO1
1.6	National missions & goals toward RWH (Jal Shakti Abhiyan, AMRUT, etc.)	01	CO1
1.7	National Water Policy – 2012 and updates	01	CO1
1.8	Legislation on RWH in India & Tamil Nadu	01	CO1
2	HYDROLOGY AND GROUNDWATER		
2.1	Hydrological cycle and water balance	01	CO2
2.2	Precipitation types and measurement	01	CO2
2.3	Rainfall measurement – Rain gauges and network density	01	CO2
2.4	Hyetograph – Rainfall data representation	01	CO2
2.5	Infiltration – Concept and influencing factors	01	CO2
2.6	Runoff estimation – Rational and empirical methods	01	CO2
2.7	Rooftop runoff estimation	01	CO2
2.8	Groundwater – Aquifer properties, Darcy's law, steady flow	01	CO2
3	METHODS OF RAINWATER HARVESTING		
3.1	RWH potential estimation for an area	01	CO3
3.2	Traditional RWH practices	01	CO3
3.3	Rooftop harvesting – Components & layout	01	CO3
3.4	Surface runoff harvesting and groundwater recharge methods	01	CO3
3.5	Site selection for RWH structures - Surface runoff Harvesting - Ground water recharge - Artificial recharge	01	CO3
4	DESIGN OF RAINWATER HARVESTING STRUCTURES		
4.1	Design considerations and components	01	CO4
4.2	Simple roof water collection system	01	CO4

4.3	Design of storage tank (capacity estimation)	01	CO4
4.4	Design of recharge pit, trench and well	02	CO4
4.5	Design of gully plug, contour bund, percolation pond, check dam	02	CO4
4.6	Efficiency of RWH system	01	CO4
5	MANAGEMENT OF RWH AND CASE STUDIES		
5.1	Difficulties in RWH at catchment and household levels	01	CO5
5.2	Evaluation and maintenance of RWH structures	01	CO5
5.3	Modernization of RWH – IoT, smart systems	01	CO5
5.4	Case studies – Urban and rural best practices	02	CO6
5.5	Success stories of Contemporary practices of RWH in India.	02	CO6
	Total	36 Hours

22CETB0	DIGITAL TECHNOLOGY IN CONSTRUCTION WITH BIM	Category	L	T	P	Credit
		PEES	3	0	0	3

Preamble

The course is concerned specifically with the utilization of Building Information Modelling (BIM). The aim of the course is to give students an exposure to BIM and related computer-based techniques for the documentation and modelling of designed structures. The course will be focusing on the processes involved in developing a full 3D design object model, not for the purpose of visualization alone, but more importantly as a tool for understanding and documenting how a proposed building design fits together and how it will perform during use. The course will introduce students to innovative concepts and processes of Building Information Modelling (BIM), a wide range of BIM applications used in the architecture, engineering and construction (AEC) industry, and future trends of BIM developments.

Prerequisite

NIL

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Understand the concept and process of Building Information and Modelling	TPS2	B	65
CO2	Apply the knowledge of BIM standards for construction projects	TPS3	B	65
CO3	Apply the knowledge of Collaboration of process and Interoperability issues	TPS3	B	65
CO4	Apply the knowledge of BIM adoption in construction project	TPS3	B	65
CO5	Apply the concept of Execution plan and Matrix associated with BIM	TPS3	B	65
CO6	Apply the process of BIM in field through various advanced methods.	TPS3	B	65

22CETC0	CONSTRUCTION ECONOMICS AND FINANCE

Category	L	T	P	Credit
PEES	3	0	0	3

Preamble

The course Construction Economics and finance basically aim at describing various aspects of engineering economics, deals with systematic evaluation of cost and benefit associated with different projects executed with different modalities.

Prerequisite

22CE640 - Accounting and Finance

Course Outcomes

On the successful completion of the course students will be able to

CO Number	Course Outcome Statement	TCE Proficiency Scale	Expected Proficiency	Expected Attainment Level %
CO1	Enumerate the basic concepts of Engineering Economics for decision making	TPS2	B	65
CO2	Formulate financial statements and analyze using the financial management concepts	TPS3	B	65
CO3	Select the source and allocation of finance to the projects.	TPS3	B	65
CO4	Identify the appropriate method of financing for various PPP and EPC models	TPS2	B	65
CO5	Apply the knowledge of risk identification and risk mitigation strategies	TPS3	B	65
CO6	Apply strategic concepts from the perspective of an organization	TPS3	B	65
