Based on the interactions with the department staffs, students and syllabus, Does the Curriculum meet the expectations of the industry? If No, please give your insight \*

Yes

No

Other: \_\_\_\_\_

What skills/knowledge do you think an Architecture Graduate will need for starting his/her own new venture? \*

Creativity, Technical Knowledge, Communication, Team Co-ordination, Team Work & Discipline - obliging with schedule.

What are the materials and construction related technologies that the Architecture students needs to learn in the current context? \*

Sustainable Techniques, Cost effective construction & Techniques - Understanding the structural layer with context to Concrete & Steel.

"Architecture graduate should have a complete understanding of service integration in architecture", please give your insight. \*

Yes, they shall know the basic layer of How Electrical, Plumbing, Sanitary, HVAC & Fire Fighting influence a project in installation, execution & maintenance.

What are the current trends that you think that an Architecture graduate should be aware of and to what level? \*

The field is Vast & the new developments with cost factors also is in dynamism. From Design digital presentation to BIM to AI interplay - all are in rapid phase of developments. It is always better to get strong with the basics of design approach, construction, material knowledge, presentation skills, services, communication - as a drop in the ocean- exploration adds on from here, in my humble opinion.

What skills do you think would increase the employability of Architecture graduates? \*

Software skills, Knowledge & thirst to learn & Discipline

As the Department is contemplating on having special focus in M.Arch program, what field of architecture do you think department of Architecture, TCE should focus on in M.Arch Program? \*

Sustainability, Large scale Planning & design with contextual understanding of Site & design programme.

Suggest any new course/s to further enrich the curriculum in terms of knowledge, skills and employability of our students: \*

Digital Architecture, Industrial Design, Sustainable Planning

Any other comments: \*

Nil

Based on the interactions with the department staffs, students and syllabus, Does the Curriculum meet the expectations of the industry? If No, please give your insight \*

Yes

No

Other: \_\_\_\_\_

What skills/knowledge do you think an Architecture Graduate will need for starting his/her own new venture? \*

Passion for architecture and willingness to learn and experiment new things

What are the materials and construction related technologies that the Architecture students needs to learn in the current context? \*

Any material or construction technology that intrests the students is good enough

"Architecture graduate should have a complete understanding of service integration in architecture", please give your insight. \*

Yes but no fresh graduate will have a complete understanding of service integration on day one. He or She will be able to pick it up on the way in course of time eventually. So, thats not an issue for a fresh architecture graduate.

What are the current trends that you think that an Architecture graduate should be aware of and to what level? \*

Not merely following ths market trend but following one's own passion will work better for a student in the long run

What skills do you think would increase the employability of Architecture graduates? \*

Problem solving skills

As the Department is contemplating on having special focus in M.Arch program, what field of architecture do you think department of Architecture, TCE should focus on in M.Arch Program? \*

Sustainability and building with earth.Traditional Construction methodologies.

Suggest any new course/s to further enrich the curriculum in terms of knowledge, skills and employability of our students: \*

Hands on carpentry course

Any other comments: \*

Building Construction Studio will have to be a hands on workshops in addition to the conventional drawing exercises.The students will have an opportunity to create and learn of whatever they draw in the studio.

Yes

No

Other: \_\_\_\_\_

What skills/knowledge do you think an Architecture Graduate will need for starting his/her own new venture? \*

knowledge on current materials and design trends in the field

What are the materials and construction related technologies that the Architecture students needs to learn in the current context? \*

array of interior materials, cladding materials, building automation, alternate construction methods

"Architecture graduate should have a complete understanding of service integration in architecture", please give your insight. \*

Absolutely. Services can never be an add on, it has to be part of the design process in a holistic way.

What are the current trends that you think that an Architecture graduate should be aware of and to what level? \*

Software, new materials and architects' works

What skills do you think would increase the employability of Architecture graduates? \*

team work, proficiency in software and social skills

As the Department is contemplating on having special focus in M.Arch program, what field of architecture do you think department of Architecture, TCE should focus on in M.Arch Program? \*

Digital and Industrial design

Suggest any new course/s to further enrich the curriculum in terms of knowledge, skills and employability of our students: \*

Sustainability, construction technology

Yes

No

Other: \_\_\_\_\_

What skills/knowledge do you think an Architecture Graduate will need for starting his/her own new venture? \*

Apart from the design process a good understanding of the construction practices. A minimum of 2 years of site experience is preferable

What are the materials and construction related technologies that the Architecture students needs to learn in the current context? \*

Apart from numerous emerging materials one should focus on conservation on existing materials like concrete and steel from the view of design and planning. The students should have in depth understanding of material characteristics and should not shy away from structural design and services

"Architecture graduate should have a complete understanding of service integration in architecture", please give your insight. \*

Yes! A good architect is one who executes his design seamlessly through structural and services drawings. Afterall architecture is the host for all these services! Structural and services design should not be dealt superficially

What are the current trends that you think that an Architecture graduate should be aware of and to what level? \*

A good understanding of AI technology, so that the student is equipped and can use judiciously as and when required automating the repetitive process and focussing the creativity. I personally feel these are great assisting tools but cannot be a substitute to the design process. A good understanding of maths and if possible basic coding (could be visual noding). I feel in the future it would be imperative to create your own design flow through algorithms and computational dyanmaics

What skills do you think would increase the employability of Architecture graduates? \*

Apart from the above mentioned, good soft skills. I feel this should be integrated right from 1st semester. The old system of collective criticisms should be back so that once student encounters the reality he can face it with ease and confidence

As the Department is contemplating on having special focus in M.Arch program, what field of architecture do you think department of Architecture, TCE should focus on in M.Arch Program? \*

Project Management, (also refer below)

Suggest any new course/s to further enrich the curriculum in terms of knowledge, skills and employability of our students: \*

To name a few...Development management, Digital integration in design process/ Design oriented programming
